Hi Candice,
If approved by your building inspector then yes.

Regards, Dean.

Is the Timbercoat appropriate for this? or do we need to provide a "sacrificial" ply panels 6mm thick are fitted in the panel recesses and held in place by the door's beading?

We are only 1mm smaller than your recommended 10mm panel thickness so not sure if okay to keep the listed doors as they are?

Thanks,

Candice Moore

If approved abrade thoroughly before application

Thank you for your recent enquiry concerning upgrading doors using Intumescent coatings. Many doors are not suitable to be upgraded to fire doors. I have attached the following Information sheet for your guidance.

Upgrading doors using Timbercoat (Painted System).

If your doors fall within the criteria we would ask that you discuss our evidence with your Buildings Officer and gain his or hers approval of our system before you proceed. Our recommendation is that both sides of the door are treated and we will be unable to supply a certificate unless enough product is purchased to protect both door sides.

Generally Thermoguard products are available for next day delivery.

You told me that you had 7 doors to upgrade. If the doors are suitable and with Building Control approval you will need the following.

4 x 5kg Timbercoat
1 x 5 & 1 x 2.5 litre flame retardant topcoat (gloss or eggshell finish) to many BS4800 or RAL colour

I hope this provides you with the information you require.

Regards, Dean.

Hello Candice,
How many doors do you need to protect?

Regards, Dean.

Hi Wallis,

As discussed could we have the technical information for upgrading existing panelled doors.

Attached a photograph for reference.

We need to upgrade them to FD30S.

Many Thanks,

Candice Moore
