Analysis of Shadowing : 21 March / 21 September (Equinox)

The end of Canal Arm adjacent to Old Mill Street receives sunlight for 3 hours out of a total of 7 hours sun on a typical day in the Spring / Autumn, with some patches receiving a total of 5 hours. These conditions are achievable in the first 30 meters of the canal arm. (Between 09:00 to 16.00)

Immediately adjacent to Block C, the Canal arm experiences at least 1 hours of sun in the worst location.
