Waste Management Strategy

In producing this document we have attempted to explain the waste disposal strategy which we intend to apply to this development. As a company we have sought and taken advise from "Fresh Start Waste Services Ltd" and various other parties. We recognise the need for an effective and environmentally sound waste disposal policy and its benefits for the development and the surrounding environs. The bullet points below give a brief outline of what we intend to do to ensure a successful and environmentally friendly development

Please note at present there are is adequate storage facilities for waste on site

1. Container storage areas are identified on the plans which will be large enough to take the mainly cardboard and wrapping waste. It is not envisaged that the unit will be used for food production or that any animal by-products will be stored on site. The only food waste will be from the small mess room and containers will be provided for the disposal of such waste

2. Designated storage areas will be clearly defined and marked to ensure all waste is stored in the correct container

3. The storage area has been designed to be easily accessible for removal of containers with no necessity for containers to be moved to another collection point

4. All containers will be sealed to avoid spillage and monitored by staff to ensure correct usage and removal

5. All different types of re-cycling containers will be enforced with literature pointing out the legal requirement and benefits of the same will be available

6. Site staff will be available to ensure monitoring of collections and to ensure any breaches in waste disposal policy is dealt with quickly with no delays to the collection procedure

7. Collection vehicles will be able to get within 3m of the storage area

8. All collection and storage areas are on level ground
