Naphthalene		5	0.000	1.67	1.6	2				

Mean value test				95th percentile value (all tests) (mg/kg)
95th Percentile value (mg/kg)	Soil Guideline value (mg/kg)	Site specific guideline value (mg/kg)	Guideline exceeded by 95th percentile value?	
26.2	20	-	Y	26.2
2.1	-	200	N	2.1
2.5	30	-	N	12.8
39.3	200	-	N	39.3
<5.0	-	-	N	5.0
<5.0	-	-	N	5.0
729.6	450	-	Y	729.6
1.2	15	-	N	1.2
43.1	75	-	N	43.1
3.4	260	-	N	3.4
<100	-	-	N	100.0
45.4	-	1570	N	45.4
0.4	-	2	N	0.4
0.1	-	60	N	0.1

Notes

1. Maximum value and mean value test carried out on number of test results available (refer to Contaminated Land report no 7 (CLR7))
2. Outlier samples identified by maximum value test are removed from sample population to carry out mean value test.
3. Further investigations suggested by statistical analysis may not necessarily be required. Refer to report for discussion.
4. Measured concentrations that are below the analytical detection limit, are assigned a value equal to the detection limit for the purposes of carrying out the above statistical analysis (in accordance with A8 of CLR7).

Outlier test statistic lies between critical values

Outlier test statistic is zero.

OPERATIONAL SUPPORT at our TEESSIDE
OFFICE - 01642 642145***

Dear Sir or Madam:

In response to your notice for the above reference, we can confirm that at present the ntl National Networks Core Network is not affected by your proposals. However, your works could affect our local infrastructure.

Therefore I have passed your enquiry to our local Area office, who will contact you in due course, should our local network be affected. For further information please contact the name and number at the top of this letter.

If you encounter any difficulties in contacting the above number, please do not hesitate to contact us on 0870 0130045.

Yours Faithfully

Peter Jamieson

ntl Plant Protection

No warranty is made as to the accuracy of the information contained within this letter. No liability of any kind whatsoever is accepted by ntl its servants or agents for any error or omission in respect of the information given in this letter. The actual position of underground services must be verified on site in accordance with Health and Safety guidance before any excavation with mechanical plant is used.

Dear Sir / Madam,

SOILTECHNICS
RECEIVED 28 OCT 2005
PROJECT REF.
ACTION BY DATE ACTIONED

New Roads and Streetworks Act 1991

35 Back Piccadilly, Manchester

Thank you for your enquiry dated 13 Oct 05, regarding the above location. I can confirm that ntl do not have any apparatus at the above location.

This information must not be relied upon in the event of excavation or other works carried out in the vicinity of ntl plant. No liability of any kind whatsoever is accepted by ntl, its servants or agents for any error or omission in respect of information given. The actual position of the underground services must be verified and established on site before any mechanical plant is used. Any works near ntl plant should be undertaken in accordance with the Health & Safety Executive guidance HSG47 - Avoiding Danger from Underground Services.

Please quote the above reference in any future communication.

Yours faithfully,

Valerie Metcalfe

Dear Sirs

Location: 35, Back Piccadilly, Manchester

I acknowledge with thanks your request of dated 13/10/05 for information on the location of our services.

Please find enclosed plans showing the approximate position of our apparatus known to be in the vicinity of this site.

I attach General Condition Information sheets, which details contact numbers for additional services (i.e. new supplies, connections, diversions) which we are unable to deal with at this office. In addition you should ensure they are made available to anyone carrying out any works which may affect our apparatus.

I trust the above meets with your requirements and look forward to hearing from you should you need anything further.

If you have any queries regarding this matter please fax to us on 0870 7510102. Queries can not be dealt with over the telephone.

Yours faithfully

Sheila Whitelaw

GENERAL CONDITIONS AND INFORMATION REGARDING UNITED UTILITIES DISTRIBUTION APPARATUS

Please ensure that a copy of these conditions is passed to your representative on site and to your contractor on site

These general conditions and precautions apply to the water distribution system of United Utilities

- 1 United Utilities provides approximate locations of its water mains or apparatus according to its records, but these records are not necessarily accurate or complete nor do they normally show the positions of private service pipes from the mains to properties. Where service pipes are shown, a blue broken line indicates their approximate position. No person or company shall be relieved from liability for any damage caused by reason of the actual positions and/or depths being different from those indicated.
- 2 Special requirements relative to our apparatus may be indicated. United Utilities staff will visit any site at reasonable notice to assist in the location of its underground water apparatus and advise any precautions that may be required to obviate any damage. To arrange a visit or for further information regarding new supplies, connections, diversions, costing, future proposals for construction of company apparatus or any notification required under these General Conditions, please telephone our Service Enquiries team on 08457 462200 or write to United Utilities, PO Box 453, Warrington, WAs 3QN.
- 3 In order to achieve safe working conditions adjacent to any water apparatus the following should be observed:
 - (a) All water apparatus should be located by hand digging prior to the use of mechanical excavation.
 - (b) During construction work where heavy plant may have to cross the line of a water main, and the main is not under a carriageway of adequate standard of construction, crossing points should be suitably reinforced with sleepers, steel plates or a specially constructed reinforced concrete raft as necessary. These crossing points should be clearly indicated and crossing the line of the water main at other places should be prevented. United Utilities staff will advise on the type of reinforcement necessary. This is particularly important on agricultural or open land, where tilling or erosion may have significantly reduced the original cover.
 - (c) No explosive should be used within 32 metres of any United Utilities apparatus without prior consultation with United Utilities.
 - (d) Where it is proposed to carry out piling within 15 metres of any water main United Utilities should be consulted so that affected main may be surveyed.
- 4 During any excavation, it is important that measures should be taken to ensure continued support for any water main:
 - (i) Where excavation of trenches adjacent to any water main is likely to affect its support, the main must be supported to the satisfaction of United Utilities.
 - (ii) Where a trench is excavated crossing or parallel to the line of a water main, the backfill should be adequately compacted to prevent any settlement which could subsequently cause damage to the main. In special cases it may be necessary to provide permanent support to a main which has been exposed over the length of the excavation before back-filling and reinstatement is carried out. No back-filled concrete should contact the main.
- 5 No other apparatus should be laid over and along the line of a water main irrespective of clearance. A minimum clearance of 450 millimetres should be allowed between any plant being installed and an existing main, to facilitate maintenance and repair, whether the adjacent plant is parallel to or crossing the main. No manhole, chamber, or other obstruction should be built over or around a water main.
- 6 Where a water main is coated with special wrapping and the wrapping is damaged, even to a minor extent, United Utilities must be notified, and the excavation must be left open for ready access so that repairs can be made. In case of any material damage to the main itself causing leakage, or weakening of the mechanical strength of the pipe, the person or body responsible should immediately notify United Utilities in order that the necessary remedial work can be carried out. The full cost of the necessary remedial work will be charged to the person or body responsible for the damage.

GENERAL CONDITIONS AND INFORMATION REGARDING UNITED UTILITIES ELECTRICITY MAINS

Please ensure that a copy of these conditions is passed to your representative and contractor on site.

These general conditions and precautions apply to the electricity distribution system of United Utilities.

- 1 There may be other United Utilities apparatus in the vicinity, which is not indicated on the cable records. Other apparatus may also be present which is owned by a third party other than United Utilities.
- 2 Before any machines are used all of United Utilities underground apparatus should be located by manual excavation taking the appropriate safety precautions in accordance with the Health and Safety Executive Guidance note HS(G)47 "Avoiding Danger from Underground Services"

Advice to Site Personnel when working near underground services

Underground services, particularly electricity and gas, can be dangerous. Damage to electricity cables can cause a dangerous flash, leading to severe burns or even death. Gas leaks can cause fire or explosion. Damage can result from excavation or penetration of the ground, e.g. by a road pin. Underground services may be found in roads, footpaths and on sites. **ALWAYS ASSUME THAT THEY ARE PRESENT. TREAT ANY SERVICES FOUND ANYWHERE AS LIVE.**

ACCIDENTS HAVE HAPPENED BECAUSE PEOPLE HAVE MISTAKEN ONE SERVICE FOR ANOTHER
e.g. black plastic covered electricity cables look like black plastic water pipes and cast iron gas and water mains look alike.
CHECK BEFORE YOU ACT.

Before starting work you MUST:

- Make sure you have plans of the underground services in the area. This may not always be possible for emergency or unforeseen works. Remember that service connection cables and pipes from the main to building or street light may not be shown;
- Use a cable and pipe locator to trace electricity cables and metal pipes.
- Look for signs of service connection cables or pipes, e.g. a gas meter or service connection entry into a house or a street light;
- Hand dig trial holes (as many as necessary) to confirm the position of services in close proximity to the area of your work.

When you start work:

- Hand dig near buried services whenever possible. Spades and shovels are safer than picks pins or forks.
- Remember that cables may be embedded in concrete.
Electricity Cables embedded in concrete **MUST** either be made dead before the concrete is broken out or another safe way of working agreed with the cable owner.
- Watch out for signs of services as work continues
- Report any damage to a cable, pipe or pipe coating however slight.
- Do not use hand-held power tools within 0.5m of the marked position of an electricity cable, unless this is impracticable and the line of the cable has been identified by plans and positively confirmed by a locator;
- Do not use hand-held power tools directly over the marked line of a cable unless:
(a) you have already found the cable at that position by careful hand digging beneath the surface and it is at a safe depth (at least 300mm) below the bottom of the surface to be broken; or
(b) physical means have been used to prevent the tool striking it;
- If an excavator is used near an electricity cable keep everyone clear of the bucket while it is digging. Bucket should not be used near cable - hand dig
- Do not use exposed services as a convenient step or hand-hold;
- Do not handle or attempt to alter the position of an exposed service.
- Do not install plant close to an existing service.
- Do not build existing services into a manhole or other structure or encase them in concrete.

GENERAL CONDITIONS AND INFORMATION REGARDING UNITED UTILITIES WASTEWATER NETWORK

- 1** **United Utilities provides the approximate locations of its sewers according to its records.** These records are not necessarily accurate or complete nor do they normally show the positions of every sewer culvert or drain, private connections from properties to the public sewers or the particulars of any private system. No person or company shall be relieved from liability for any damage caused by reason of the actual positions and/or depths being different from those indicated. The records do indicate the position of the nearest known public sewer from which the likely length of private connections can be estimated together with the need for any off site drainage rights or easements.
- 2** You should address sewerage enquiries to United Utilities Service Enquiries Team telephone **0845 746 2200**.
- 3** **Special requirements relative to our sewers may be indicated.** United Utilities staff or its contractors will visit any site at reasonable notice to assist in the location of its underground sewers and advise any precautions that may be required to obviate any damage. To arrange a visit or for further information regarding new supplies, connections, diversions, costing, or any notification required under these General Conditions, please see paragraph 2 above.
- 4** **Where public sewers are within a site, which is to be developed and do not take any drainage from outside the area,** they are from an operational viewpoint redundant. The Developer must identify all redundant sewers affected by the development and apply to United Utilities or its Wastewater Network Operator in writing for these sewers to be formally closed. The Developer shall bear all related costs of the physical abandonment work.
- 5** **Public Sewers within the site that are still live outside the area** will be subject to a "Restricted Building zone". This would normally be a surface area equivalent to the depth of the sewer measured from the centre line of the sewer on either side. No construction will be permitted within that zone. The Developer should also note that deep and wide rooted trees must not be planted in close proximity to live sewers. Access to public sewers must be maintained at all times and no interference to manholes will be permitted during construction work.
- 6** **Where there is a public sewer along the line of a proposed development/building,** arrangements shall be made by the developer at his cost to divert the sewer around the development. Where this is not possible and as a last resort, a "Building Over Agreement" will need to be completed under section 18 of the Building Act 1984. The Developer shall design building foundations to ensure that no additional loading is transferred to the sewer and submit such details both to the Local Authority's Building Control Officer and to United Utilities or its Wastewater Network Operator for approval/acceptance. United Utilities or its Wastewater Network Operator on a rechargeable basis would normally undertake all aspects of design work associated with the diversion of any part of the operational wastewater network.
- 7** **Where there is a Non-Main River Watercourse/Culvert passing through the site,** the landowner has the responsibility of a riparian owner for the watercourse/culvert and is responsible for the maintenance of the fabric of the culvert and for all works involved in maintaining the unrestricted flow through it. Building over the watercourse/culvert is not recommended. The developer must contact the local authority before any works are carried out on the watercourse/culvert. Where it is necessary to discharge surface water from the site into the watercourse/culvert the developer shall make an assessment of the available capacity of the watercourse/culvert (based on a 1 in 50 year event) and ensure that the additional flow to be discharged into the watercourse/culvert will not cause any flooding. In appropriate cases, flooding may be prevented by on-site storage. The developer shall submit the relevant details required to substantiate his development proposals. Details of any outfall proposed shall also be submitted to the Environment Agency at Richard Fairclough House, Knutsford Road, Warrington, Cheshire, for their approval.
- 8** **Where there is a Main River Watercourse/Culvert passing through the site,** the Developer shall submit all proposals affecting the river to the Environment Agency at the address stated in paragraph 7 for approval/acceptance.

RRUID: 007.00008839070001

Date: 19 October 2005

Dear Sir,

Coal Mining Report 35 BACK PICCADILY, MANCHESTER, LANCASHIRE

I refer to the enquiry dated 14th October 2005, received 17th October 2005, in connection with the above.

This report is based on and limited to the records in the possession of The Coal Authority at the time the search is answered.

Past Underground Mining

According to the records in our possession, the property is not within the zone of likely physical influence on the surface from past underground coal workings.

Present Underground Mining

The property is not within the zone of likely physical influence on the surface from any present underground coal workings.

Future Underground Mining

The property is not within a geographical area for which a licence to extract coal by underground methods is awaiting determination by the Coal Authority.

The property is not within a geographical area for which a licence to extract coal by underground methods has been granted.

The property is not within the zone of likely physical influence at the surface from plans of future workings in our possession.

However reserves of coal exist in the locality which could be worked at some time in the future subject to feasibility, licences, and planning consents.

We have no record of any notice of the risk of the land being affected by subsidence being given under S.46 of the Coal Mining Subsidence Act 1991.

Shafts and Adits

We have no knowledge of any mine entries within, or within 20 metres of, the boundary of the property.

Surface Geology

Records in our possession do not disclose any fault or other line of weakness at the surface as having affected the stability of the property.

Past Opencast Mining

The property is not located within the geographical boundary of an opencast site from which coal has been extracted by opencast methods.

Present Opencast Mining

The property does not lie within 200 metres of the geographical boundary of an opencast site within which coal is being extracted by opencast methods.

Future Opencast Mining

The property is not within 800 metres of the geographical boundary of an opencast site for which a licence to extract coal by opencast methods is awaiting determination.

The property is not within 800 metres of the geographical site boundary of an opencast site for which a licence to extract coal by opencast methods has been granted.

Subsidence

The records in our possession do not disclose any damage notice or claim having been given, made or pursued in respect of the property since 1 January 1984.

The records in our possession do not disclose any current "Stop Notice" affecting the property.

The records in our possession do not show any request having been made to execute preventative works under S.33 of the Coal Mining Subsidence Act 1991.

Withdrawal of Support

The property does not lie within a geographical area in respect of which a notice of entitlement to withdraw support has been published.

The property does not lie within a geographical area in respect of which a notice has been given under S.41 of the Coal Industry Act 1994, revoking the entitlement to withdraw support.

Working Facilities Orders

The property is not within a geographical area that is the subject of an Order made under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

Payments to Owners of Former Copyhold Land

The property is not within an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Additional Remarks

These replies are prepared in accordance with the 2003 editions of the Coal Authority's Terms and Conditions, User Guide and the Law Society's Guidance Notes.

Copyright in coal mining reports and certificates belongs to the Coal Authority. Information used to compile this report is protected by the Coal Authority's database right. All rights are reserved and unauthorised use is prohibited. Copyright and other intellectual property is not transferred to external parties by possession of a mining report or certificate, however those for whom the report is supplied have the right to use it.

We acknowledge the receipt of your remittance in payment of our fee.

Yours faithfully

A handwritten signature in black ink, appearing to read 'Pennell', with a stylized flourish at the end.

Stephen Pennell

Director of Mining Information and Services

Crown Copyright.

PLAN NOT TO SCALE

This map is reproduced from the Ordnance Survey material by The Coal Authority [or division thereof] with the permission of the Controller of Her Majesty's Stationery Office. Crown Copyright. Unauthorised reproduction infringes Crown Copyright and may lead to prosecution or civil proceedings. Licence Number: ALS1060A001.

This is a plan of the boundaries of the property in respect of which this report has been prepared. It is the responsibility of the user to ensure that the boundaries shown correspond with those of the property.

BGS Borehole Order Form

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity Datasheet places great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from English Nature (and the Scottish and Welsh equivalents), the Environment Agency (and the Scottish equivalent) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the legend database to 1km from a single point or a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

2.4 Geology and Geohydrology of the Area

2.4.1 Geology of the Area

- 2.4.1.1 Inspection of the geological map of the area (at 1: 50000 scale) published by the British Geological Survey indicates the topography local to the site (based on borehole/observations recorded on the map) is formed in the following sequence of soils.

Strata	Approximate thickness (m)	Typical soil type	Likely permeability
Glacial Till	>5m	Clay, sands and gravels	Moderate
Middle Coal Measures	>20m	Sand	High

Table reference 2.4.1

The soil types and assessment of permeability's are based on geological memoirs.

2.4.2 Geohydrology – aquifer designation and groundwater vulnerability

- 2.4.2.1 Envirocheck reports the site is located in an area designated a major aquifer probably reflecting the near surface geology comprising Middle Coal Measures, which are likely to be reasonably permeable deposits. A major aquifer is defined by the Environment Agency in their publication 'policy and practice for the protection of groundwater' on highly permeable formations. They are highly productive and able to support large abstractions for public water supply and other purposes. In addition, Envirocheck provide an extract of the groundwater vulnerability map recording the soils containing the aquifer is a high leaching potential. These soils have little ability to attenuate diffuse source pollutants. Non-absorbed diffuse source pollutants and liquid discharges will percolate rapidly through them. The groundwater vulnerability map also records a sub class of soil type U, (undifferentiated). In such a case there is insufficient information to classify the soils accurately and generally a default class of H1 is adopted. A sub class of H1 is defined as a soil which readily transmits liquid discharges because they are either shallow or susceptible to rapid by-pass flow directly to rock, gravel or groundwater.

2.4.3 Geohydrology – water abstractions

with the recent local area

- 2.4.3.1 Envirocheck report three abstraction points within 1km of the site, with water being taken from both boreholes and surface water resources for general cooling purposes. One of these licences has been revoked, whilst permit end dates are not available for the remaining two licenses.

The abstraction

2.4.4 Geohydrology – source protection zone

- 2.4.4.1 Envirocheck does not record the site is located within a zone protecting a potable water supply abstracting from a major aquifer (i.e. a source protection zone).
