Why SafeGuard?

SafeGuard composite doors are one of the UK's leading brands of residential doors, manufactured and assembled using only the best of components, you can rest assured these hand built doors are amongst the best available.

Exceptional Durability
High impact resistant glass reinforced polyester (GRP) skin that will maintain its pristine appearance.

Stunning Aesthetics
The woodgrain finish was developed from oak tree grain. You'll also find the same woodgrain effect and moulding design on the slim glazing cassette, giving a seamless and authentic finish.

Low Maintenance
Everything about our GRP composite door is designed to be easy to maintain - simply wipe clean with warm soapy water.

Read about door maintenance on page 50.

Excellent Weatherproofing
With water resistant polymer composite rails, our doors will keep the weather at bay and will stay looking great for longer.

Unparalleled Security
Our GRP composite doors offer enhanced security thanks to its rigid polymer sub-frame, high density insulated core and high impact resistant GRP skin. Rest assured that our doors are tried, tested and trusted, keeping you and your family safe.

See our hardware ranges on page 46 - 49.

Triple Glazed Glass
Our triple glazed, laminated as standard insulated glass units encapsulate the decorative glazing between two panes of clear glass, protecting it and making it easy to keep clean.

Read more about our glass on page 50.

Superb Sound Insulation
With a weighted noise reduction of 31 decibels it means you can be sure your new door will keep outside noise to a minimum.

See more technical information on page 50.

Look for the indicative rating on each page

A

When it comes to thermally efficient doors, a SafeGuard GRP composite door is the best choice you can make.

These days, we all worry about how much energy our homes use. The rising cost of our energy bills and our impact on the environment mean we want to keep our consumption to a minimum.

One of the best ways to do this is to choose thermally efficient products that keep warmth in and cold out, saving money and emissions.

The alphabetical, colour coded scales shown in this brochure follow the same grading system as that found in white goods with 'A' representing the most energy efficient.

The testing shows the thermal efficiency of each of the doors. The darker the blue, the less heat is being lost. Reds and greens – the predominant colours on the timber door – indicate high heat loss.

Doors were tested at the University of Salford's Energy House. This represents a typical Salford 1919 terraced house and its construction represents 21% of the UK's current housing stock.

The house has been reconstructed in a fully environmentally controllable chamber, in which climatic conditions can be maintained, varied, repeated and patterns monitored. For the test, the inside temperature of the Energy House was 25°C with an exterior temperature of 5°C.

Colours shown should be used for guidance only as the limitations in the printing process may mean that colours vary from those illustrated.

Technical Figures

A SafeGuard GRP composite door has a wealth of facts and figures that prove its quality. The door:

- Reduces outdoor noise by an average of 31dB
- Achieves Global Warming Potential (GWP) score of less than 5
- Achieves Ozone Depletion Potential (ODP) score of zero
- The door leaf and glazing system are major components when part of a door set and have a proven ability to achieve PAS24:2016, industry's enhanced security standard, a prerequisite in attaining certification to Secured by Design a police initiative to protect against unlawful intrusion

Everything about a SafeGuard GRP composite door has been designed to enhance your home for years to come.

Care and Maintenance

To keep your door clean, prolong the life of the surface finish and protect your warranty, we recommend you wash it regularly using warm soapy water (washing up liquid is ideal) and a soft, lint-free cloth. If you live in a coastal area, in a heavily industrialised area or near a main road, you may need to clean your door more frequently.

It is important that you DO NOT use any of the following on your door:

- Abrasive cleaners or scouring pads
- Any type of bleach or solvent (e.g. white spirit, methylated spirit, cellulose thinners, acetone or nail varnish remover)
- Any type of adhesives or tack for providing temporary protection or fixing of seasonal or other decorations etc.
- High pressure or steam cleaners

Door Construction

Every SafeGuard GRP composite door is manufactured to the highest of standards to ensure it is strong, durable and secure. We have sold over four million doors to date, evidence of the quality and exacting specification we demand.

The door has a perimeter sub-frame of a solid, water-resistant polymer material, which is reinforced with Laminated Veneered Lumber (LVL). A thermoset GRP skin is bonded to this sub-frame and the core of the door is then filled with high density, 100% CFC-free polyurethane foam. Water resistant polymer composite rails protect the core from damage or water absorption and the high impact resistant thermoset GRP skin keeps your door looking great for longer!

The door's core is what makes it so thermally efficient and so good at reducing sound. In fact, it is the most thermally efficient door on the market, increasing your home's energy efficiency and saving you money on your energy bills.

Colours shown should be used for guidance only as the limitations in the printing process may mean that colours vary from those illustrated.
