Site viewed with Steve Leaf. A Tree Survey in 2009 highlighted problems in some of the trees, however since then, most of the remainder have significantly deteriorated

T1. Lime - Fell due to condition (decay fungus Ganoderma applanatum/adspersum present)
T2. Cherry. Good condition - Retain with light crown lift to 2-3m
T3. Sycamore - Fell to allow development of T2
T4. Lime. Poor condition, twin-stemmed, Ivy-clad, 1 stem leaning heavily, insufficient foliage left if suckers removed - Fell
T5. Lime. Poor condition, in decline with extensive dieback - Fell
T6. Lime. Poor condition, in decline with extensive dieback - Fell
T7. Lime. Poor condition with extensive dieback - Fell
T8. Sycamore. Poor condition, skewed crown - Fell
T9. Ash. Poor form, straggly, unlikely to develop into a decent tree - Fell
T10. Lime. Poor condition, in decline with extensive dieback - Fell
T11. Lime. Poor condition, in decline with extensive dieback - Fell
T12. Lime. Poor condition, in decline with extensive dieback - Fell
T13. Sycamores (4 stems). Excessive lean over highway which will exaggerate over time - Fell
