Development location:
Strategy prepared by:
Date Prepared:

Notes
The following strategy should be prepared using the guidance document available from:

http://www.manchester.gov.uk/opservices/rubbish/developers.htm

1.	**Number of bins proposed?** - Please provide details of the number of bins proposed and how this was calculated.
	At present Aria Technologies have 6 No. 1100 Euro Bins which are emptied 3 times a week by PHS Waste Tech.The bins are 75% full when emptied giving a ratio of 2.14 litres of waste per m2. We assume that once extended Aria Technologies will generate 6,933 litres of waste, which would therefore require 7 No. 1100 Euro Bins. One additional bin will be provided as part of works to accomodate the addition waste which will be generated.
2.	**Bin storage area** - Please include a plan of the proposed bin storage area, showing the bins that are proposed and the proposed collection point. - Please describe how occupants will transfer waste to the bin store and the distance travelled in doing so.
	Please refer to Cube Architecture and Design drawing AS049-03 Rev C for details of refuse store locations. Collection and transfer of waste will remain as existing all waste will be managed within the unit and transfered to the external bin stores daily.
3.	**Bin collection arrangements** - Please describe the bin collection area, including how and where bins will be moved to in order to reach the collection vehicle. - Please include plans showing how the collection vehicle will travel around the site.
	Waste shall be collected as existing PHS Waste Tech refuse collection will be from the main entrance gates. Once on site PHS will transfer the bins from the refuse store and return once emptied.
