## **1.0 INTRODUCTION**

### **1.1 Instruction**

- 1.1.1 GeoCon Site Investigations Ltd (GeoCon) have been commissioned by Hattrell DS One Architects (to be referred to as Hattrell from here on in) on behalf of Forshaw Land & Property Group (to be referred to as Forshaw from hereon in) to undertake a Phase I Preliminary Risk Assessment on Land off George Leigh Street, Manchester.
- 1.1.2 It is understood that a Phase I Preliminary Risk Assessment is required to establish the potential for contamination at the site, to assist with a planning application for a proposed residential development at the site.

### **1.2 Scope of Works**

#### Phase I

-  To undertake a site walkover.
-  To appraise the land use history of the site by the examination of available historical plans.
-  To assess the environmental setting of the property with specific reference to geology, mining & quarrying, hydrogeology and hydrology.
-  To gain an understanding of any concerns of the regulatory authorities (Local Authority Planning, Building Control and Environmental Health departments and the Environment Agency) regarding local land filling, flooding, mining, quarrying and other concerns.
-  To produce a Conceptual Site Model (CSM).

### **1.3 Limitations**

- 1.3.1 The assessment and interpretation of the factual data obtained as part of this phase I preliminary site investigation has been undertaken in accordance with standard consulting practise and with current national and international guidance.
- 1.3.2 This report presents the observations made during the phase I preliminary site investigation and the factual data obtained. The conclusions and recommendations in this report are limited to those which can be made based on the findings of the survey and information provided by third parties. GeoCon assumes all third party data to be true and correct. No responsibility can be accepted by GeoCon for inaccuracies in the information provided by any other party.
- 1.3.3 This report is written in the context of an agreed scope of woks and should not be used in a different context. Furthermore, new information, improved practises, and changes in legislation may require the reinterpretation of the report in whole or in part after its original issue. GeoCon reserve the right to alter their conclusions and recommendations in the light of further information that may become available. This report is provided for the sole use of the client and their professional advisors and is confidential to them unless agreed otherwise in writing.

## **2.0 SITE LOCATION AND DESCRIPTION**

### **2.1 Site Location**

- 2.1.1 The site is located on land at George Leigh Street, Manchester at approximate National Grid Reference NGR: 384830:398690 (centre of the site).
- 2.1.2 A site location plan is presented as Drawing No. GSI0517/01 in Appendix A.

### **2.2 Site Description**

- 2.2.1 The site is an irregular shaped piece of land with an approximate area of 0.04Ha.
- 2.2.2 The site is currently partially occupied by existing two and three storey buildings with the exception of the northwest corner of the site which is currently covered by hardcore at the surface. At this stage GeoCon have not had permission to enter the existing buildings.
- 2.2.3 There is evidence of existing / former buried services running across the site which may still be live.
- 2.2.4 The topography of the site is generally flat.
- 2.2.5 The site is bound by George Leigh Street to the northwest, Cotton Street to the southwest, Loom Street to the southeast, and adjacent buildings to the northeast.
- 2.2.6 Access to the site is via Cotton Street from the southwest.

### **2.3 Site Usage**

- 2.3.1 The site appears to have been developed since the earliest available historical maps with a public house in the west, a school that encroached onto the site in the east, and an unspecified building in the southeast. Sometime before 1927 the unspecified build was demolished and a new unspecified building (later labelled as a hostel in 1992) was shown in the north of the site. A third unspecified building is shown from around 1927 in the south of the site which is no longer shown after 1966. From 1909 the public house is no longer labelled and from 1962 it is labelled as a twine & paper store.
- 2.3.2 The site then remains unchanged until present day.

### **2.4 Future Site Usage**

- 2.4.1 It is currently proposed to redevelop the site with a new build four storey residential building.

### **2.5 Surrounding Area**

- 2.5.1 The current surrounding land use to the site is generally city centre mixed residential, commercial and industrial properties in all directions.
- 2.5.2 The topography of the surrounding area is generally flat.

### **2.6 Statutory Services**

- 2.6.1 GeoCon have not been provided with buried service location plans at this stage.

### **2.7 Site Reconnaissance**

- 2.7.1 A site walkover was carried out on 27<sup>th</sup> November 2015. All details from the site walkover are included in the site description above.
- 2.7.2 There are no further relevant details above those which are already given in this report.

### **3.0 SITE HISTORY**

#### **3.1 Site History**

- 3.1.1 The history of the site has been determined from available historical maps obtained as part of the Envirocheck Report and via the Envirocheck Analysis online historical mapping tool. The history of the site and of the surrounding area is summarised overleaf in Table 3.1: Site History. It should be noted that some of the maps come with little to no coverage.
- 3.1.2 The information presented overleaf in Table 3.1: Site History, is given based on the distance and direction from the closest point of each feature to the site. The table presents the data broken down into the following categories:- feature; the potential use of each feature where applicable; the date each particular feature is first observed; the direction of each feature from the site; the approximate distance of each feature from the site; the approximate area of each feature; and any other relevant information regarding the site and surrounding area in general.

#### **3.2 Aerial Photography**

##### Recent Aerial Photograph:

- 3.2.1 Recent aerial photography shows the site to be occupied by the existing hostel building in the northeast, part of the school building in the east, and covered by rough ground in the northwest, west and south. The surrounding area is generally occupied by mixed residential, commercial and industrial properties in all directions.

Table 3.1: Site History

| Feature              | Use / Feature Type  | Date first observed | Date no longer shown | Direction from site | Distance (m) from site | Area (m2) | General notes                                                                |
|----------------------|---------------------|---------------------|----------------------|---------------------|------------------------|-----------|------------------------------------------------------------------------------|

- 4.1.2 All relevant parts of the third party responses are presented within the Appendices where available.

### 4.2 Geology

- 4.2.1 The British Geological Survey (BGS) Open Geoscience shows the site to be underlain by the geological succession outlined below in Table 4.2: Geology.

**Table 4.2: Geology**

| Geology     | Description /strata           |
|-------------|-------------------------------|
| Artificial  | None Recorded                 |
| Superficial | Glacial Till                  |
| Bedrock     | Chester Pebble Beds Formation |

- 4.2.2 There are no known artificial deposits indicated underlying the site.
- 4.2.3 The superficial deposits indicated underlying the site are Glacial Till. No BGS description is available; however, these deposits are generally gravelly clay with cobbles and varying silt sand and gravel content.
- 4.2.4 The bedrock geology beneath the site is shown to be the Chester Pebble Beds Formation which is generally described as '*sandstone, fine- to coarse-grained, commonly pebbly, with conglomerates and sporadic siltstones; cross-stratified*' (BGS general description).

### **4.3 Hydrogeology**

#### Superficial Deposits

- 4.3.1 The Environmental Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as unproductive strata, which are generally described as *'layers or drift deposits with low permeability that have negligible significance for water supply or river base flow'* (EA general description).

#### Bedrock

- 4.3.2 The Environmental Agency aquifer classification scheme indicates that the bedrock aquifer designation for the site is classed as a Principle Aquifer which is generally described as *'layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer'* (EA general description).

#### General

- 4.3.3 There is one licensed groundwater abstraction point within 1000m of the site, located approximately 997m to the southwest for industrial use. The nearest sensitive licensed abstraction point is located approximately 1112m to the northwest for breweries process water.
- 4.3.4 There are no known licensed public drinking water abstractions within 2000m of the site.
- 4.3.5 It is possible that there may be private unlicensed water abstractions that exist locally in the area.
- 4.3.6 There are no Source Protection Zones (SPZ) within 2000m of the site.

### **4.4 Hydrology**

- 4.4.1 The nearest surface water course to the site is a pond feature located approximately 206m to the east. The Rochdale Canal is located approximately 242m to the southeast of the site.
- 4.4.2 There are no major surface water courses within 250m of the site.
- 4.4.3 There is no EA General Quality Assessment (GQA) data available within relevant distance to the site.
- 4.4.4 There are no licensed surface water abstraction points within 1000m of the site.
- 4.4.5 There are no discharge consents within 250m of the site.
- 4.4.6 There are three pollution incidents to controlled waters within 250m of the site. The closest to the site is located approximately 180m to the southeast of the site for unknown pollutant into the Rochdale Canal and has been classed as category 3 – minor incident. Remaining entries are both classed as category 3 – minor incidents.
- 4.4.7 Envirocheck indicates that the site is not located within an area at risk of flooding, and is not within 250m of an area at risk of flooding.

### **4.5 Radon**

- 4.5.1 The Building Research Establishment report "Radon: Guidance on Protective Measures for New Dwellings" 1999, BR211, indicates that the site is not located in an area that may be affected by radon and that further geological assessment is not required.

### **4.6 Landfills and Waste**

- 4.6.1 Information obtained from the Landmark Information Group indicates that there is one licensed waste management facility within 250m of the site, located approximately 152m to the north of the site, for

end of life vehicles. This is considered to be waste management above ground rather than actual landfilling below ground.

4.6.2 There are no further landfill sites or other waste associated sites within 500m of the site boundary.

4.6.3 As the site is situated within a city centre, it is likely that there will be made ground present beneath the site of unknown thickness.

#### **4.7 Mining, Subsidence and Foundations**

4.7.1 There are no BGS recorded mineral sites within 500m of the site boundary.

4.7.2 The Coal Authority online indicates that the site is not located within a coal mining area and that a Coal Authority mining report is not required for the site.

4.7.3 The Coal Authority online indicates that the site not located within a brine extraction area.

4.7.4 Landmark indicates that there is no risk from non-coal mining at the site.

4.7.5 Landmark indicates that there are potential geological hazards that may be present on the site. These are outlined below in Table 4.3: Potential Geological Hazards.

**Table 4.3: Potential Geological Hazards**

| Potential Geological Hazard | Risk Rating   |
|-----------------------------|---------------|
| Compressible Ground         | No hazard     |
| Collapsible Ground          | Very low risk |
| Ground Dissolution          | No hazard     |
| Running Sands               | Very low risk |
| Shrinking Or Swelling Clay  | Very low risk |
| Landslides                  | Very low risk |

#### **4.8 Fuel Storage**

4.8.1 Landmark indicates that there is one fuel station entry within 250m of the site, located approximately 149m to the southwest of the site and is now obsolete. There are no records of whether any former below ground storage tanks at the site have been decommissioned or whether any investigation has been carried out into the potential contamination at the site or if remediation has taken place at the site.

#### **4.9 Potentially Contaminative Uses**

4.9.1 There are fifty contemporary trade directories within 250m of the site. The closest to the site is located approximately 17m to the southwest for clothing & fabrics manufacture. Remaining entries include knitwear manufacturers & wholesalers; garage services; lithographic plate makers; printers; catering equipment; printers textile; coal & smokeless fuel merchants & distributors; cleaning materials & equipment; pallets, crates & packaging cases; car dealers; exhaust & shock absorber centres; car component manufacturers; car breakers & dismantlers; electrolysis; safes & vaults – suppliers & installers; photocopiers; furniture manufacturers; distribution services; and window frame manufacturers.

4.9.2 It should be noted that not all of the above site uses will be potentially contaminating.

4.9.3 There is one local authority pollution prevention and controls within 250m of the site, located approximately 77m to the west for air pollution – hide and skin processes. This is not considered to have affected the site.

#### **4.10 Hazardous Substances**

4.10.1 There are no hazardous substance uses recorded within 250m of the site.

#### **4.11 Environmentally Sensitive Issues**

4.11.1 The site is within 250m of a nitrate vulnerable zone. There are no further environmentally sensitive sites within 500m of the site.

#### **4.12 Previous Site Investigations**

4.12.1 GeoCon have no knowledge of any historical site investigations at the site and have not been provided with any.

## 5.0 PRELIMINARY GEOTECHNICAL ASSESSMENT

### 5.1 General

- 5.1.1 Based upon the information reviewed, the underlying shallow geology is likely to consist of Glacial Till overlying Chester Pebble Beds Formation which generally comprise sandy gravelly clay, and sandstone respectively.
- 5.1.2 Made Ground may also be present on site.
- 5.1.3 Table 5.1 'Geotechnical Considerations and Geotechnical Risks' below presents a summary of geotechnical considerations and risks both observed during the site walkover and some generic risks.

**Table 5.1: Geotechnical Considerations and Geotechnical Risks**

| Existing or Potential Features of Concern                | Geotechnical Consideration                                                                                                                           | Geotechnical Risk to Proposed Development                                                                                                                                |
|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Made Ground                                              | Any potential made ground beneath the site.                                                                                                          | Made ground can cause total and differential settlement of any new structures.                                                                                           |
| Trees and vegetation                                     | Large mature trees adjacent to the northern, eastern, and western site boundaries.                                                                   | Tree roots have the potential to cause clay soils to shrink causing settlement of new structures.                                                                        |
| Shrinkage and expansion of clay soils                    | Clay soils beneath the site.                                                                                                                         | Potential for shrinkage and / or heave of clay soils causing damage to new structures.                                                                                   |
| Groundwater ingress                                      | Shallow groundwater beneath the site.                                                                                                                | Shallow ground water can have an impact on construction and foundation excavations. Pumping and / or dewatering may be required.                                         |
| Existing / former foundations and underground structures | New buildings may be situated upon the sites of former demolished buildings or buildings that will be demolished as part of the proposed development | Uneven founding, inconsistent ground conditions, and unsuitable bearing capacity for new structures.                                                                     |
| Aggressive ground                                        | Chemical content of the soils beneath the site.                                                                                                      | Chemically aggressive ground may have the potential to attack buried concrete.                                                                                           |
| Soft / loose / weak soils and / or rock beneath the site | Unsuitable founding strata beneath the site                                                                                                          | Soft and lose soils or weak rock may be in adequate to found on. A suitable foundation option should be selected based on the actual ground conditions beneath the site. |
| Embankments                                              | Unstable slopes and embankments                                                                                                                      | Collapse onto or into any new developments                                                                                                                               |
| Shallow mine workings beneath the site                   | Any coal seams present beneath the site may have been worked in the past                                                                             | Worked mine seams leave voids underground that have the potential to settle when new loads are placed above them.                                                        |

### 5.2 Discussion

#### Structures

- 5.2.1 The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development.
- 5.2.2 The site is not considered to be affected by shallow coal mining.

- 5.2.3 The site is not considered to be affected by brine extraction.

Sustainable Drainage

- 5.2.4 In accordance with PPS25 (2007) the Planning Authority are likely to insist that surface water drainage from any new-build or redevelopment complies with current design practices for Sustainable Urban Drainage (SUD's) construction of separate drainage systems for foul and surface water. Surface water shall be required to be attenuated reducing the discharge of water from the site requiring treatment and disposal. A 20% reduction in surface water discharge rates off the site is to be expected – allowing for the 1 in 100 year storm event and allowing for climate change.
- 5.2.5 Table 5.2: Refined Geotechnical Risk Model, overleaf shows the refined geotechnical risk model for the site.

**Table 5.2: Refined Geotechnical Risk Model**

| Potential Risk                                           | Potential Receptor                                                                                                                                   | Potential Pathway                                                                                    | Likelihood | Severity | Risk Linkage       | Risk Classification | Action / Mitigation                                                                                                                                                                                                                   |
|----------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------|------------|----------|--------------------|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Sulphate and pH                                          | Buried concrete                                                                                                                                      | Buried structures being placed adjacent to made ground containing high sulphates and low pH's        | Likely     | Low      | Potentially Active | Medium              | BRE SD I suite to assess the risks to buried concrete.                                                                                                                                                                                |
| Ground Dissolution                                       | Buildings, Structures and foundations                                                                                                                | Settlement and cracking                                                                              | Negligible | High     | Inactive           | Negligible          | No further action at this stage.                                                                                                                                                                                                      |
| Settlement due to shallow mine workings beneath the site | Buildings, Structures and foundations                                                                                                                | Settlement and cracking                                                                              | Negligible | High     | Inactive           | Negligible          | No further action at this stage.                                                                                                                                                                                                      |
| Settlement due to shrinkage / swelling clays             | Buildings, Structures and foundations                                                                                                                | Settlement and cracking                                                                              | Possible   | High     | Potentially Active | Medium to high      | Moisture content and Atterberg analysis to establish the potential shrinkage / swelling properties of the clay / silt beneath the site. Foundations may need to be deepened in accordance with NHBC Chapter 4.0 building near trees). |
| Existing / former foundations and underground structures | New buildings may be situated upon the sites of former demolished buildings or buildings that will be demolished as part of the proposed development | Uneven founding, inconsistent ground conditions, and unsuitable bearing capacity for new structures. | Likely     | High     | Potentially Active | Low to medium       | Existing structures and foundations to be grubbed-up and replaced with a suitably compacted engineered fill material.                                                                                                                 |

## 6.0 PRELIMINARY RISK ASSESSMENT

### 6.1 Introduction

- 6.1.1 In statutory guidance regarding potentially contaminated land, risk assessments are used as technique on a site-specific basis to identify potential environmental issues. As recommended by BS 10175 an Initial Generic Conceptual Site Model has been formulated which defines the 'pollutant linkage' through source pathway and receptor methodology. All three must be present in order to pose a risk to the end users and to the environment; i.e. if there is no pathway between the source and the receptor, then there is no 'pollutant linkage' and hence negligible risk to the receptor.

### 6.2 Risk Assessment Methodology

- 6.2.1 The purpose of a Phase I Preliminary Risk Assessment (Desk Study) is to obtain information regarding the site or property to gain a preliminary understanding of potential environmental issues. This information includes existing and proposed use, site history, and environmental setting. The information obtained is used to develop a Conceptual Site Model (CSM), which describes potential hazards (sources), pathways, and receptors, which may be relevant to a property or site. The following definitions have been adapted from Part IIA of the Contaminated Land Regulations 2000:

- 6.2.2 **Source** – A source can be defined as a potential contaminant, substance, or condition that has the potential to cause harm to the environment, humans or other flora and fauna.
- 6.2.3 **Pathway** – A pathway is defined as the route by which a source is brought into contact with a receptor. This can include the transport of contamination via groundwater, wind borne dust, vapours, excavation and deposition, dermal contact, ingestion and inhalation.
- 6.2.4 **Receptor** – Receptors are defined as anything that can be affected by a source such as human beings, flora and fauna, other living organisms, groundwater and surface water, physical systems and built structures.
- 6.2.5 Some of the above such as groundwater, surface water, flora, and fauna can be considered as both pathways and receptors.
- 6.2.6 A risk may be considered significant if all three of the above stages are present and thereby forming a pollutant linkage.

### 6.3 Outline Conceptual Site Model (CSM)

- 6.3.1 The potential risks based on the collated information gathered as part of this Phase I Preliminary Risk Assessment are discussed below.

#### Potential Sources:

- 6.3.2 The following potential sources of contamination have been identified:-

-  Reworked / made ground beneath the site associated with construction and demolition on site and of the surrounding residential area.
-  Potential for contamination to have occurred at the site as a result of historical and contemporary industrial processes at the site.

- ✚ Potential for mobile hydrocarbon contamination at the site associated with historical and contemporary industrial uses / processes within influencing distance.
- ✚ Potential for hazardous ground gasses associated with areas of potential made ground within influencing distance to the site.
- ✚ Potential for PCB's from nearby electrical substations.

#### Potential Pathways

6.3.3 The following potential pathways have been identified at the site:

- ✚ Ingestion and inhalation of site generated dust.
- ✚ Ingestion of vegetables produced on site.
- ✚ Dermal contact with contaminated materials.
- ✚ Inhalation, suffocation, and potential of explosion from hazardous ground gasses from off-site sources.
- ✚ Leaching of contaminants present in any made ground beneath the site into underlying soils, nearby surface waters and groundwater beneath the site.

#### Potential Receptors

6.3.4 The following potential receptors have been identified:

- ✚ Site end users and construction workers could be at risk from exposure to contaminated soils/materials at the site via ingestion, direct contact, and inhalation of contaminated dust/vapours. Members of the public off site could also be at risk from inhalation of contaminated dust.
- ✚ End users of the site could be at risk from hazardous concentrations of ground gases via inhalation.
- ✚ Principle aquifer beneath the site could be at risk from potential leachable contaminants at the site.
- ✚ Nearby surface water courses could be at risk from potential leachable contaminants at the site.
- ✚ Other ecosystems could also be at risk from potential contamination at the site.
- ✚ Any effluent 'aggressive' groundwater leaching contaminating substances from the made ground across the site has the potential to attack below ground structures and services.

6.3.5 Table 6.1 Preliminary Conceptual Site Model, overleaf shows the preliminary conceptual site model and potential pollutant linkages for the site.

**Table 6.1: Preliminary Conceptual Site Model (CSM)**

| Source of Contamination                                                                                                                                                                                                                                                                                            | Pathway                                                                                                                         | Receptor                                                                        |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| Metals and metalloids (possibly contained within any Made Ground beneath the site)                                                                                                                                                                                                                                 | Ingestion of soil                                                                                                               | Current and future site users<br>Neighbouring residents<br>Construction workers |
|                                                                                                                                                                                                                                                                                                                    | Inhalation of dust                                                                                                              |                                                                                 |
|                                                                                                                                                                                                                                                                                                                    | Dermal contact                                                                                                                  |                                                                                 |
|                                                                                                                                                                                                                                                                                                                    | Consumption of home grown vegetables                                                                                            |                                                                                 |

## 6.4 Discussion

### Human Health

- 6.4.1 Current and future end users of the site are likely to be low to moderate risk of being affected by the soils and groundwater beneath this site.
- 6.4.2 From the information available, the site itself has had some historical use. There is a potential for made ground to be present at the site associated with the past construction and demolition at the site and the surrounding city centre area.
- 6.4.3 The potential for contamination to have migrated on to the site from the historical and contemporary site uses within influencing distance of the site is considered to be low to moderate. historical and contemporary site uses within the surrounding area include: - cotton mills; public house; school; unspecified building; smithy; soap works; upholstery works; firewood yard; cabinet factory; mirror warehouse; coal yard; ice factory; timber yard; paper works; printing works; garages; electric substation; clothing factory; clothing & fabrics manufacture; knitwear manufacturers & wholesalers; garage services; lithographic plate makers; printers; catering equipment; printers textile; coal & smokeless fuel merchants & distributors; cleaning materials & equipment; pallets, crates & packaging cases; car dealers; exhaust & shock absorber centres; car component manufacturers; car breakers & dismantlers; electrolysis; safes & vaults – suppliers & installers; photocopiers; furniture manufacturers; distribution services; and window frame manufacturers, along with any associated tanks and chimneys.

- 6.4.4 It should be noted that not all of the above site uses will be potentially contaminating.
- 6.4.5 The underlying geology of the site and surrounding area is indicated to be the Glacial Till overlying Chester Pebble Beds Formation, which are very low and high permeability respectively.
- 6.4.6 Therefore, the likelihood of a potential pollutant linkage is considered to be low to moderate, and the risks to future end users are considered to be low to moderate at this stage.
- 6.4.7 Risks to neighbouring residents and construction workers posed by the soils and groundwater beneath this site are likely to be very low and low to moderate respectively.
- 6.4.8 There are several known electric substations within 250m of the site. It is likely that further electric substations or former electric substations that have not been identified are present within influencing distance to the site. Therefore, the risks from PCB's are considered to be low to moderate.

#### Ground Gasses

- 6.4.9 Information obtained from the Landmark Information Group indicates that there is one licensed waste management facility within 250m of the site, located approximately 152m to the north of the site, for end of life vehicles. This is considered to be waste management above ground rather than actual landfilling below ground.
- 6.4.10 There are no further landfill sites or other waste associated sites within 500m of the site boundary.
- 6.4.11 As the site is situated within a city centre, it is likely that there will be made ground present beneath the site and the surrounding area as a whole of unknown thickness.
- 6.4.12 Therefore, the risks of hazardous ground gasses affecting the site are considered to be low but possible.
- 6.4.13 Risks to neighbouring residents and construction workers from the site are considered to be very low and low respectively.
- 6.4.14 The site is not located in an area that may be affected by radon and further geological assessment is not required.

#### Surface Water

- 6.4.15 The nearest surface water course to the site is a pond feature located approximately 206m to the east. The Rochdale Canal is located approximately 242m to the southeast of the site.
- 6.4.16 There are no major surface water courses within 250m of the site.
- 6.4.17 There is no EA General Quality Assessment (GQA) data available within relevant distance to the site.
- 6.4.18 There are no licensed surface water abstraction points within 1000m of the site.
- 6.4.19 There are no discharge consents within 250m of the site.
- 6.4.20 There are three pollution incidents to controlled waters within 250m of the site. The closest to the site is located approximately 180m to the southeast of the site for unknown pollutant into the Rochdale Canal and has been classed as category 3 – minor incident. Remaining entries are both classed as category 3 – minor incidents.
- 6.4.21 Therefore, based on the above, the risks to surface waters are considered to be very low to negligible at this stage.
- 6.4.22 Envirocheck indicates that the site is not located within an area at risk of flooding, and is not within 250m of an area at risk of flooding.

#### Groundwater

- 6.4.23 The Environmental Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as unproductive strata, and the bedrock aquifer designation for the site is classed as a Principle Aquifer.
- 6.4.24 There is one licensed groundwater abstraction point within 1000m of the site, located approximately 997m to the southwest for industrial use. The nearest sensitive licensed abstraction point is located approximately 1112m to the northwest for breweries process water.
- 6.4.25 There are no known licensed public drinking water abstractions within 2000m of the site.
- 6.4.26 It is possible that there may be private unlicensed water abstractions that exist locally in the area.
- 6.4.27 There are no Source Protection Zones (SPZ) within 2000m of the site.
- 6.4.28 There will likely be a reasonable thickness of generally impermeable clay beneath the site and the depth to rock head in this area is anticipated to be around 10.00mbgl.
- 6.4.29 Therefore, based on the above, the risks to drinking water and groundwater are considered to be very low to negligible at this stage.

#### Plants and Native Grasses

- 6.4.30 Any plants that may be grown at the site in areas of landscaping may potentially be at risk from phytotoxic elements in any artificial soils beneath the site.

#### Water Supply/Plastic Pipes

- 6.4.31 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction. The risk of this is considered to be low to moderate at this stage.

#### Buried Concrete

- 6.4.32 Inadequately designed buried concrete would be at risk from potentially elevated sulphates and low pH in the soils and groundwater beneath the site.

#### Refined Conceptual Model

- 6.4.33 Table 6.2 overleaf shows the refined conceptual model and potential pollutant linkages for the site.

**Table 6.2: Refined Conceptual Site Model (CSM) and Potential Pollutant Linkages**

| Potential Sources                                                      | Potential Receptor                                                                                                                 | Potential Pathway                                                                                           | Likelihood | Severity | Pollutant Linkage             | Risk Classification    | Action / Mitigation                                                                                                                                              |

## **7.0 CONCLUSIONS AND RECOMMENDATIONS**

### **7.1 Conclusions**

#### Geoenvironmental

- 7.1.1 A review of the preliminary site investigation information reveals that current and future end users of the site are likely to be low to moderate risk of being affected by the soils and groundwater beneath this site. From the information available, the site itself has had some historical use. There is a potential for made ground to be present at the site associated with the past construction and demolition at the site and the surrounding city centre area. The potential for contamination to have migrated on to the site from the historical and contemporary site uses within influencing distance of the site is considered to be low to moderate. historical and contemporary site uses within the surrounding area include: - cotton mills; public house; school; unspecified building; smithy; soap works; upholstery works; firewood yard; cabinet factory; mirror warehouse; coal yard; ice factory; timber yard; paper works; printing works; garages; electric substation; clothing factory; clothing & fabrics manufacture; knitwear manufacturers & wholesalers; garage services; lithographic plate makers; printers; catering equipment; printers textile; coal & smokeless fuel merchants & distributors; cleaning materials & equipment; pallets, crates & packaging cases; car dealers; exhaust & shock absorber centres; car component manufacturers; car breakers & dismantlers; electrolysis; safes & vaults – suppliers & installers; photocopiers; furniture manufacturers; distribution services; and window frame manufacturers, along with any associated tanks and chimneys. It should be noted that not all of the above site uses will be potentially contaminating.
- 7.1.2 The underlying geology of the site and surrounding area is indicated to be the Glacial Till overlying Chester Pebble Beds Formation, which are very low and high permeability respectively.
- 7.1.3 Therefore, the likelihood of a potential pollutant linkage is considered to be low to moderate, and the risks to future end users are considered to be low to moderate at this stage.
- 7.1.4 Risks to neighbouring residents and construction workers posed by the soils and groundwater beneath this site are likely to be very low and low to moderate respectively.
- 7.1.5 There are several known electric substations within 250m of the site. It is likely that further electric substations or former electric substations that have not been identified are present within influencing distance to the site. Therefore, the risks from PCB's are considered to be low to moderate.
- 7.1.6 It is considered possible that the site would be classed as contaminated land under Part IIA of the Environmental Protection Act (EPA) 1990.

#### Ground Gasses

- 7.1.7 Information obtained from the Landmark Information Group indicates that there is one licensed waste management facility within 250m of the site, located approximately 152m to the north of the site, for end of life vehicles. This is considered to be waste management above ground rather than actual landfilling below ground. There are no further landfill sites or other waste associated sites within 500m of the site boundary. As the site is situated within a city centre, it is likely that there will be made ground present beneath the site and the surrounding area as a whole of unknown thickness. Therefore, the risks of hazardous ground gasses affecting the site are considered to be low but possible.
- 7.1.8 Risks to neighbouring residents and construction workers from the site are considered to be very low and low respectively.
- 7.1.9 The site is not located in an area that may be affected by radon and further geological assessment is not required.

### Controlled Waters

- 7.1.10 The nearest surface water course to the site is a pond feature located approximately 206m to the east. The Rochdale Canal is located approximately 242m to the southeast of the site. There are no major surface water courses within 250m of the site. There is no EA General Quality Assessment (GQA) data available within relevant distance to the site. There are no licensed surface water abstraction points within 1000m of the site.
- 7.1.11 Therefore, based on the above, the risks to surface waters are considered to be very low to negligible at this stage.
- 7.1.12 Envirocheck indicates that the site is not located within an area at risk of flooding, and is not within 250m of an area at risk of flooding.
- 7.1.13 The Environmental Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as unproductive strata, and the bedrock aquifer designation for the site is classed as a Principle Aquifer. There is one licensed groundwater abstraction point within 1000m of the site, located approximately 997m to the southwest for industrial use. The nearest sensitive licensed abstraction point is located approximately 1112m to the northwest for breweries process water. There are no known licensed public drinking water abstractions within 2000m of the site. It is possible that there may be private unlicensed water abstractions that exist locally in the area. There are no Source Protection Zones (SPZ) within 2000m of the site. There will likely be a reasonable thickness of generally impermeable clay beneath the site and the depth to rock head in this area is anticipated to be around 10.00mbgl.
- 7.1.14 Therefore, based on the above, the risks to drinking water and groundwater are considered to be very low to negligible at this stage.

### Plants and Native Grasses

- 7.1.15 Any plants that may be grown at the site in areas of landscaping may potentially be at risk from phytotoxic elements in any artificial soils beneath the site.

### Water Supply/Plastic Pipes

- 7.1.16 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction. The risk of this is considered to be low to moderate at this stage.

### Geotechnical

- 7.1.17 Any proposed structures would be at risk of total and differential settlement without any geotechnical information being made available. The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development. Inadequately designed buried concrete would be at risk from potentially elevated sulphates and low pH in the soils and groundwater beneath the site.
- 7.1.18 The site is not considered to be affected shallow coal mining. Therefore, risks from shallow coal mining are considered to be unknown at this stage.
- 7.1.19 The site is not considered to be affected by brine extraction. Therefore, risks from brine extraction are considered to be negligible.

### Sustainable drainage

- 7.1.20 In accordance with PPS25 (2007) the Planning Authority are likely to insist that surface water drainage from any new-build or redevelopment complies with current design practices for Sustainable Urban Drainage (SUD's) construction of separate drainage systems for foul and surface water. Surface water shall be required to be attenuated reducing the discharge of water from the site requiring treatment and disposal. A 20% reduction in surface water discharge rates off the site is to be expected – allowing for the 1 in 100 year storm event and allowing for climate change.
- 7.1.21 Based on the anticipated ground conditions it is considered unlikely that sustainable drainage would be suitable at the site. If sustainable drainage is to be considered, it is recommended that soak-away testing is carried out in accordance with BRE 365 at the site to establish the sites suitability for sustainable drainage.

## **7.2 Recommendations**

- 7.2.1 It is therefore recommended that a combined Phase II Geoenvironmental and Geotechnical Site Investigation is carried out at the site to establish the type, nature and extent of any potential contamination present with subsequent recommendations, and to provide details of the engineering properties of the soils beneath the site in order to facilitate foundation design for the proposed development.

- 7.2.2 A recommended scope of works for the intrusive site investigation would be as follows:

- ✚ Two cable percussion boreholes to a nominal depth of 15.00mbgl or rock head (anticipated to be at around 8.00mbgl)
- ✚ Windowless sample boreholes across the site at approximately four to six locations to a nominal depth of up to 6.00mbgl or refusal.
- ✚ Insitu geoenvironmental and geotechnical sampling and testing.
- ✚ Full supervision of all works by engineering geologist including sampling and detailed geotechnical descriptions to BS5930, EN ISO 14688-1 EN ISO 14688-2 and EN ISO 14689 of all strata types encountered within the exploratory holes.
- ✚ The installation of combined gas and groundwater monitoring wells, with subsequent gas and groundwater monitoring in accordance with CIRIA 665.
- ✚ A suite of chemical testing, which should include the following:
  - Heavy metals and inorganics
  - Speciated PAH
  - TPH CWG
  - PCB's
  - Asbestos Screen
- ✚ Geotechnical Testing, which should include:

#### Soils:

- BRE SD 1 Reduced Suite for concrete design
- Atterberg Limits and Moisture Content

➤ Undrained Triaxial Testing

- ✚ Provision of interpretive report to provide a Generic Quantitative Risk Assessment (GQRA) for the site, and to provide details of the engineering properties of the soils beneath the site in order to facilitate foundation design for the proposed development.

7.2.3 It is recommended that the above conclusions and recommendations are agreed in principle with the Local Authority and the Environment Agency to gain their approval prior to commencement of the development to avoid unnecessary complications or delays at a later stage.

#### Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

|        | <b>Coal Mining Affected Areas</b><br>Description: In an area which may be affected by coal mining activity. It is recommended that a coal mining report is obtained from the Coal Authority. Contact details are included in the Useful Contacts section of this report.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | A13NE (NE)                             | 0                            | 5       | 384831<br>398691 |

Russian Military Mapping Legends

1:5,000 and 1:10,000 mapping

a. Not drawn to scale    b. Drawn to scale

Government and Administrative Buildings    Military and Industrial Buildings

Military and Communication Areas    Subway Entrance

Fireproof Building    Prominent Fireproof Building

Non-fireproof Building    Non-fireproof Building (non-dwelling)

Factory, mill, and flour mill, with chimneys    Factory, mill, and flour mill, without chimneys

Power Station, drawn to scale    Hydroelectric Power Station

Radio Station, drawn to scale    Telephone Station, drawn to scale

Abandoned Open-pit Mine or Quarry    Open-pit Salt Mine

Pit    Oil Deposit or Well    Oil Seepage

Tailings Pile    Fuel Storage Tanks    Natural Gas Tank

Bench Mark    Drill Hole    Burial Mound    Triangulation Point on Burial Mound

Single-track Railroad    Double-track Railroad and Station Building

Coniferous Forest    Deciduous Forest    Mixed Forest

Lawns    Citrus Orchard    Wet Ground    Scattered Vegetation

243.8    Values for prominent elevations

186.0    Numbers for spot elevations, depth soundings, contour lines, etc.

0.2    Velocity of the current, width of river bed, depth of river

180/12    Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

Russian Alphabet (For reference and phonetic interpretation of map text)

1:25,000 mapping

a. Not drawn to scale    b. Drawn to scale

Government and Administrative Buildings    Military and Industrial Buildings

Military and Communication Areas    Subway Entrance

Partly Demolished Buildings    Demolished Buildings

Built-Up Area with Fireproof Buildings Predominant    Built-Up Area with Non-Fireproof Buildings Predominant

Individual Fireproof Building    Prominent Industrial Building

Individual Dwelling, Fireproof    Ruins of an Individual Dwelling

Factory or Mill Chimney    Factory or Mill with Chimney    Factory or Mill without Chimney    Mine or Open Pit Mine

Operating Shaft or Mine    Non-Operating Shaft or Mine    Salt Mine    Tailings Pile

Pit    Stone Quarry    Gas Pump or Service Station    Fuel Storage or Natural Gas Tank

Oil or Natural Gas Derrick    Small Hydroelectric Power Station    Power Station    Transformer Station

Cemetery    Burial Mound (height in metres)    Triangulation Point on Burial Mound    Triangulation Point

Bench Mark    Bench Mark (monumented)    Telegraph Office    Telephone Station

Radio Station    Radio Tower    Airfield or Seaplane Base    Landing Strip

Telegraph/Telephone Lines    Main Highway    Highway under Construction    Improved Dirt Road (former truck road)

Double-track Railroad with First Class Station    Dismantled Railroad    Railroad Under Construction

Shore Embankment    River or Ditch with Embankment    Direction and velocity of current    Water Gauge    Water Level Mark

Well    Water Reservoir or Rain Water Pit    Spring    Isobath with value

Heavy (Index) Contour Line    Contour Line and Value    Half Contour Line    Spot Elevation Value

Coniferous    Deciduous    Mixed    Scrub

## Lancashire And Furness

### Published 1848

### Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.

They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

## Ordnance Survey Plan

Published 1980 - 1986

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

## 10k Raster Mapping

Published 2006

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

## VectorMap Local

Published 2015

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

### Supply of Unpublished Survey Information

#### Published 1973 - 1974

#### Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

## Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.
