I propose to carry out Crown reduction on a mature Sycamore at the location identified to a height of 25FT and 15FT width after the work.

My reason for this work is that the tree is far higher than my house and if it fell would demolish it, also branches have been falling off and damaging my property, as well as being a danger to anyone in the garden.

Also it takes a lot of light, and I can only use half of the garden as nothing will grow under the tree.

When you carry out your site visit I would be pleased if you could look at this tree from my garden.

Many Thanks
