
Waste Management

Bins Proposed

It is proposed to provide three separate refuse bins to sort the waste generated into easily recycle materials. The provision is estimated on the anticipated demand of the business and will be reviewed after the premises are opened. It is anticipated that plastic and general refuse generation will be increased from the existing use but cardboard quantity will be reduced. The refuse disposal from the current use is well managed.

- 1 bin for plastic bottles
- 1 bin for cardboard
- 1 bin for general rubbish

Bin Storage Area

The three refuse bins will be located at the rear of the premises within the secure rear yard. Refuse will be collected internally within the premises and transferred to the refuse bins as required. Management procedures will be put into place to avoid the build up of waste within the building and to avoid overflowing of refuse bins.

Bin Collection Arrangements

The refuse bins will be presented for collection from Tennyson Street on collection days.
