WASTE MANAGEMENT STRATEGY

IN CONNECTION WITH PLANNING APPLICATION

1 RIPPINGHAM ROAD

WITHINGTON M20 3FX

DEMOLITION PROCESS – This project will involve a considerable amount of demolition more accurately referred to as dismantling. Demolition implies the complete removal from site a building or part of a building whereas; in this case, there will be a degree of dismantling due to the unsafe condition of the gable wall.

It is intended that the facing bricks generated by this dismantling will be re-cycled by either re-using on site in the construction of the gable wall or by negotiating with a specialist company to take the brick arising for crushing to create hardcore or for cleaning for re-use.

OTHER ARISINGS will be removed from site by a combination of refuse skips and grab waggon whichever is more appropriate at any particular stage.

THERE WILL BE NO BURNING ON SITE.

END USER STRATEGY: When fully occupied, the property will provide accommodation for the refuse generated by the commercial and residential units. Each unit will be afforded access to the secure Amenity area where council supplied bins will facilitate refuse removal with special acknowledgement of the specified re-cycling strategy currently in place.
