

TOOTAL COURTYARD LOADING BAY ELECTRICAL CABLING REMOVALS FOR OPTION 1 LINEAR FITTINGS

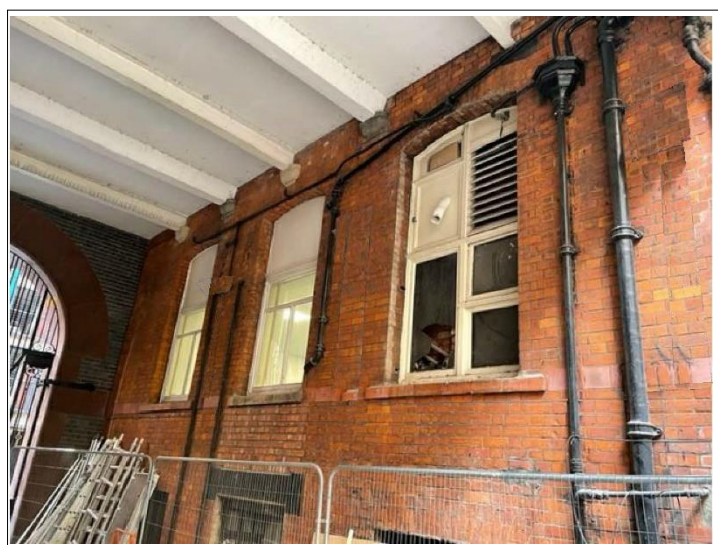

In this option, the flood lights and associated cables fixed to the façade will be removed. In doing so reducing the amount of visible fixings into the original fabric, along with unsightly cable runs.

As evidenced below, the removal of these cables makes for a much cleaner and more original appearance to the façade.

TOOTAL COURTYARD LOADING BAY ELECTRICAL CABLING REMOVALS FOR OPTION 1 LINEAR FITTINGS

In addition to the removal of the cables and fixings associated with the upward facing flood lights. We will remove the redundant metal trunking as shown below.

Further evidence of our intention to clear the area of any cables and systems that are not for critical operational purposes or regulatory compliance.

As evidenced elsewhere in this submission, the propose linear fittings which are hidden within the I-beams as soffit level, and fixed using removable clamps matched to the approved colour, would appear to be the best option.
