**Proposed Extension to; 10 Dernford Avenue
 Manchester
 M19 1DU**

INTRODUCTION

This design and access statement has been prepared as part of a Full Planning Application for the construction of new Ramp to front at; **10 Dernford Avenue, Manchester, M19 1DU.**

Design

Following the recent assessment for equipment and adaptations, the extension works are considered to be necessary and appropriate. This extension has been designed for a disabled occupant who resides at the property and ground floor facilities would greatly assist in their daily needs and care.

Use

The property is not located within a conservation area.
The location plan highlights the boundary of the site. Scale 1:1250

Layout

The location and design of the extension has been highlighted individually by explanatory names on the plans provided.

Scale

The Ramp will project forward 3.6m to the front elevation of the property to enable level access for a disabled person.

The proposed ramp will be visible from the main road due to the layout of the site and position of the premises.

The Scale sizes are advised on each plan.

Appearance

The ramp is to be constructed with pre-cast concrete flags and other materials that will blend in and match the existing property in respect to size and colour as near as possible.

Access

All access is as existing, Public highway not affected.

Access for the purpose of emergency services will not be affected by the proposed ramp and all existing vehicular access points will be maintained.

Time scales

As previously discussed, our client has specific medical needs that requires urgent attention and the speed and time of this adaptation / ramp in our opinion is paramount.

I am asking if this case could be looked at earlier than normal or at least the time scale for approval be significantly reduced considering the above points so that we can proceed.

Yours sincerely

Neil Brickles MSc (Hons)
