Executive Summary

Client	Victor (M1) Limited
Location	Adjacent to the Ashton Canal at Paradise Wharf, Manchester.
Description	The site currently comprises a car parking area associated with offices and residential apartment buildings to the north and west and is surfaced with tarmac and block paving. A two-storey masonry office building is present to the north and a seven-storey apartment building to the west. A retaining wall forms the eastern boundary of the site, beyond which is Paradise Walk and a diecasting factory.
Development	It is proposed to develop the site with a four-storey residential scheme, marketed as Paradise Mews.
Site History	Current site use as a car park is not considered to represent a potentially significant source of contaminants of concern. However, the site was formerly used as a loading shed. The area surrounding the site has had a significant industrial history, which may also represent potentially significant sources of contamination. Neighboring land use has included various works and factories, timber yards, wharves, mills and a goods rail station. An infilled canal basin is also present adjacent to the western boundary of the site.
Geology	A previous investigation of the site by Geo Research in January 2000 recorded Made Ground to depths of up to 4.70m below ground level (bgl), overlying Till. British Geological Survey (BGS) mapping indicates that the site is underlain by Till, overlying the Chester Formation. Historical borehole records in the vicinity of the site did not prove the base of the Till and indicate it is likely to be at least 20m in thickness.
Radon	The radon guidance on protective measures for new dwellings indicates that the site is in a 'low' probability radon area where less than 1% of homes are estimated to be at or above the Action Level. Radon gas protection measures are therefore not required in the construction of new dwellings or extensions.
Mining & Ground Stability	Following a review of the CON29M Coal Mining Report obtained for the site, significant risks associated with coal mining were not considered to be present and no further assessment considered to be required. The environmental database report indicates that the site represents a low risk with regard ground stability issues relating to running sands, collapsible ground, landslides, compressible ground, ground dissolution features and shrinking/swelling clays.
Flood Risk	According to the Flood Map for Planning, available on the gov.uk website, the site is located within Flood Zone 1, whereby there is between a 1 in 1000 chance of flooding from rivers or the sea occurring each year.
Environmental Setting	The site is underlain by Till, classified as an Undifferentiated Secondary Aquifer. However, the site is not located within a groundwater Source Protection Zone (SPZ) and the nearest licensed groundwater abstraction is located approximately 650m to

© Clancy Consulting 2021

the southeast, used for process cooling. Therefore, this aquifer is not considered to represent a sensitive controlled water receptor.
The cohesive nature of the Till beneath the site is likely to restrict the vertical migration of potential contaminants of concern beneath the site towards the deeper Chester Formation Principal Aquifer. Therefore, this has not been considered further as a receptor.

The nearest surface water feature is the Ashton Canal, located immediately beyond the southern boundary of the site. The Rochdale Canal is located approximately 135m to the northwest. The River Medlock is located approximately 600m to the southeast. Given its distance, the River Medlock is not considered to be at significant risk from contamination sourced from the subject site.

There is considered to be potential for any contaminants present beneath the site to migrate off-site towards neighbouring residential properties. However, these comprise multistorey apartment buildings with little or no soft landscaping at ground level. The potential risk of neighbouring site users to come into contact with contaminants sourced from the site is therefore not considered to be significant.

UXO

A review of publicly available bomb risk mapping from Zetica indicates the site to be in an area of moderate bombing density during the Second World War. A Detailed UXO Desk Study is therefore recommended to assess the potential risk posed by UXO, prior to intrusive works.

Conclusions and Recommendations

Potential pollutant linkages associated with the site have been identified which may be active following the proposed redevelopment of the site. A Phase 2 Environmental Site Investigation is therefore recommended to determine the contamination status of soil beneath the site and to assess the potential risk poses by ground gas. Geotechnical testing is also recommended in order to provide parameters to enable foundation, floor slab and road pavement design.

On the basis of the above, the following further works are recommended:

- Procurement of a Detailed UXO Threat Assessment report.
- Carry out an intrusive site investigation to confirm ground conditions beneath the site. Any new structures will likely require a piled foundation solution and selected boreholes should be taken to sufficient depth to allow detailed pile design.
- Installation of wells in boreholes to allow the assessment of the potential risk to future site users posed by ground gases.
- Soil samples should be recovered from selected exploratory holes and tested for potential contaminants of concern.
- In-situ testing and geotechnical soil sampling should be carried out during intrusive investigation to allow recommendations to be made for foundation and pavement design.
- The stability of the retaining wall forming the eastern boundary of the site should also be considered when designing foundations for the proposed development.

1.0 Introduction

1.1 Background

Clancy Consulting Limited has been instructed by Victor (M1) Limited to carry out a Phase 1 Preliminary Risk Assessment at as site located adjacent to the Ashton Canal at Paradise Wharf, Manchester. The site currently comprises a car park associated with an existing residential development.

It is proposed to develop the site with a four-storey residential scheme, marketed as Paradise Mews.

A site location plan and proposed development layout are included in Appendix I.

1.2 Objectives

The objectives of this investigation are summarised below:

- Provide a review of the site's land use history by reference to ordnance survey maps of the area.
- Assess the environmental setting, geology, hydrology, hydrogeology, mining and subsidence history of the site and surrounding area.
- Consider the potential risk to end users of the site from unexploded ordnance (UXO).
- Consider the potential risk to end users of the site from hazardous ground gas.
- Consider potential geotechnical constraints for the proposed development.
- Develop a preliminary risk assessment and a detailed 'conceptual site model' with regard to potential contamination sources, pathways and receptors.
- Provide recommendations regarding the requirement for further investigations, if required, to satisfy the Local Planning Authority.

1.3 Limitations of the Study

Clancy Consulting Limited cannot be held responsible for any omissions, misrepresentation, errors or inaccuracies with the supplied third-party report information. The report is written in the context of an agreed scope of work and budget and should not be used in a different context. New information or improved practices and changes in legislation may require a reinterpretation of the report in whole or in part.

Clancy Consulting Limited reserves the right to amend either conclusions or recommendations in light of any further information that may become available. The report is provided for the sole use of Victor (M1) Limited for the objectives discussed previously only and is confidential to them.

The report may not be relied upon by any other party without prior written consent of Clancy Consulting Limited. Those using this information in subsequent assessments or evaluations do so at their own risk.

© Clancy Consulting 2021

2.0 Desk Study

2.1 General

Background information was sought from the following sources:

- Ordnance Survey historical maps (selected copies included in Appendix II).
- Zetica UXO Preliminary Risk Map (Appendix III).
- British Geological Survey (BGS) sheets (Appendix IV).
- Coal Mining Report (Appendix V)
- Environment Agency site sensitivity & flood risk maps (Appendix VI).
- Environmental datasheets (Appendix VII).

2.2 Site Setting and Description

The site covers an area of approximately 0.04 hectares and is located approximately 300m to the north of Manchester Piccadilly train station at Ordnance Survey (OS) Coordinates 384960, 398140. A site location plan is included in Appendix I.

The site currently comprises a car parking area associated with offices and residential apartment buildings to the north and west and is surfaced with tarmac and block paving. A two-storey masonry office building is present to the north and a seven-storey apartment building to the west. A retaining wall forms the eastern boundary of the site, beyond which is Paradise Walk and a diecasting factory.

2.3 Site History

In order to investigate the development history and previous land uses at the site and surrounding area, historical OS maps were examined. Copies of the maps are presented in Appendix II.

Table 1 below is not intended to provide a comprehensive review of all the changes which have occurred at the site and instead provides a summary of the most salient points relating to the development history of the site. The most significant historical land uses are highlighted in bold text for ease of reference.

Table 1 – Site History

Date(s)	Site	Surrounding Land
1848 to 1951	The site was occupied by **commercial / industrial type buildings** and labelled as a wharf. Goad insurance plans from 1889 indicated that the site was occupied by a **loading shed**. A **canal basin** encroached onto the far western corner of the site.	Ancillary buildings or **stables** were present immediately to the north of the site, beyond which was a building labelled as **Junction Lead Mills**. Terraced **residential properties** were located beyond Paradise Walk to the east. A **canal basin and loading shed** extended beyond the site boundary to the west. The **Ashton Canal** formed the southern boundary of the site, beyond which were the **Store Street Mills**. A **clothing factory** was present approximately 50m to the northeast of the site, beyond which was an **iron and steel warehouse**. A **garage** was present approximately 60m to the west. A **packing case manufactory** was present approximately 80m to the southeast of the site and a **timber yard** approximately 90m to the south. A **timber yard and sawmill** were present from approximately 90m to the northwest. A **goods station** and a **wharf** were present from approximately 80m to the west of the site. A **brass and iron works** were present from approximately 100m to the southeast.
1954 to 1955	The eastern portion of the site only was occupied by a likely **commercial type structure**.	The loading shed no longer extended westwards from the site and the canal basin appeared to have been **infilled**. Junction Works to the north was indicated to produce **'gowns, etc'**.
1969 to 1985	Unlabeled **ancillary type buildings** had been constructed in the west of the site.	Store Street Mills, the clothing factory, packing case manufactory, brass and iron works and goods station were no longer indicated to be present and the sites appeared to be **vacant** with no structures indicated,

© Clancy Consulting 2021

Date(s)	Site	Surrounding Land
1990 to 1999	The site appeared to be vacant and may have been used for **car parking**.	**Office buildings** labelled 'the stables' were indicated beyond the northern boundary of the site. A **works** had been constructed from approximately 40m to the east of the site, beyond Paradise Walk.
2006 to present	The site layout was predominantly unchanged.	**Apartment buildings** were indicated to be present beyond the western boundary of the site.

2.4 UXO Risk Assessment

A review of publicly available bomb risk mapping from Zetica indicates the site to be in an area of moderate bombing density during the Second World War. A Detailed UXO Desk Study is therefore recommended to assess the potential risk posed by UXO, prior to intrusive works.

The Zetica report is included in Appendix III.

2.5 Geology

A previous investigation of the site by Geo Research in January 2000 (reference 4721/PWH) recorded Made Ground to depths of up to 4.70m below ground level (bgl), overlying Till.

British Geological Survey (BGS) mapping indicates that the site is underlain by Till, overlying the Chester Formation. Historical borehole records in the vicinity of the site did not prove the base of the Till and indicate it is likely to be at least 20m in thickness.

Copies of the geological plans are provided in Appendix IV.

2.6 Mining and Ground Stability

The site is located within a Coal Mining Reporting Area. Therefore, a CON29M Coal Mining Report was obtained for the site. The report stated:

- The property is in a surface area that could be affected by underground mining in 2 seams of coal at 1,050m to 1,070m depth, and last worked in 1961. However, any movement in the ground due to coal mining activity associated with these workings should have stopped by now.
- Although coal reserves are present beneath the site which could potentially be worked in the future, the Coal Authority has received no information that this is planned.
- No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.
- There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.
- The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.
- The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.
- The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.
- There are no licence requests outstanding to remove coal by opencast methods within 800m of the boundary.
- The property is not within 800m of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.
- The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50m of the enquiry boundary, since 31st October 1994.
- The Coal Authority has no record of a mine gas emission requiring action.
- The property is not in an area where a notice to withdraw support has been given.

On the basis of the above, further assessment of the potential risk posed by coal mining is not considered to be required.

© Clancy Consulting 2021

A Copy of the Coal Mining Report is provided in Appendix V

The environmental database report indicates that the site represents a low risk with regard ground stability issues relating to running sands, collapsible ground, landslides, compressible ground, ground dissolution features and shrinking/swelling clays.

There are no BGS recorded mineral sites indicated to be present within 500m of the site.

2.7 Hydrogeology

The Till, indicated to be present beneath the site, is classified by the Environment Agency (EA) as an Undifferentiated Secondary Aquifer. The underlying Chester Formation is classified as a Principal Aquifer.

According to EA data, the site is not located within a groundwater Source Protection Zone (SPZ).

Information provided by the EA indicates that there are records of three potentially active licensed groundwater abstractions within 1km of the site. These relate to abstractions used for process cooling located approximately 650m to the southeast, 700m to the southwest and 860m to the west of the site.

Groundwater quality beneath the site has been classified as ‘poor’ under the EA Local River Basin Management Plan for the area.

2.8 Hydrology

The nearest surface water feature is the Ashton Canal, located immediately beyond the southern boundary of the site. The Rochdale Canal is located approximately 135m to the northwest. The River Medlock is located approximately 600m to the southeast.

The chemical quality of each of the above watercourses has been classified as ‘fail’ under the EA Local River Basin Management Plan for the area.

There are no records of active licensed surface water abstractions indicated to be present within 1km of the site.

There is one record of a potentially active discharge consent within 250m of the site. This relates to a consent located approximately 35m to the southeast, belonging to United Utilities Water Ltd and relating to the release of storm sewage overflow.

There is one record of a major pollution incident to controlled waters recorded within 500m of the site. This relates to the release of sewage into a tributary of the River Mersey 354m to the southwest of the site in March 1991. Other incidents within 500m of the site as classified as minor.

2.9 Soil Geochemistry

According to the BGS National Geoscience Information Service, the following background average soil concentrations can be expected within natural soils at the site:

- Arsenic – 15 - 25 mg/kg
- Cadmium – <1.8 mg/kg
- Chromium – 60 - 90 mg/kg
- Lead – 100 - 200 mg/kg
- Nickel – 30 - 45 mg/kg

These concentrations are not considered to be elevated.

It should be noted that the soil geochemistry has been estimated solely on the basis of published geology and not empirical data.

© Clancy Consulting 2021

2.10 Flood Risk

According to the Flood Map for Planning, available on the gov.uk website, the site is located within Flood Zone 1, whereby there is less than a 1 in 1,000 annual probability of river or sea flooding.

The environmental database report indicates that there is a limited potential for groundwater flooding to occur at the ground surface.

The site may be located within a critical drainage area. The appointed drainage engineer should consult with the Lead Local Flood Authority (LLFA) to confirm this.

Copies of the site sensitivity and flood risk maps are included in Appendix VI
.

2.11 Radon Risk Potential

The radon guidance on protective measures for new dwellings indicates that the site is in a 'low' probability radon area where less than 1% of homes are estimated to be at or above the Action Level.

Radon gas protection measures are therefore not necessary in the construction of new dwellings or extensions.

2.12 Landfill Sites

There are no records of landfill sites or waste management facilities within 500m of the site.

Historical mapping indicates that an infilled canal basin may be present adjacent to the western boundary of the site.

2.13 Industrial Land Uses

There are three potentially active Local Authority Pollution Prevention and Control permits recorded within 500m of the site. These appear to relate to the recycling of metals at the works present beyond Paradise Walk to the east of the site.

There are a large number of potentially active Contemporary Trade Directories recorded within 500m of the site. These include clothing manufacturers, die-casting, French polishing, crime scene cleaning services, upholstery cleaners, shutter manufacturers, recyclers, printers and builder's merchants. The closest entry (a clothing manufacturer) is indicated to be located approximately 170m to the southeast of the site.

Full details of the waste management and industrial land uses are detailed in the environmental database presented in Appendix VII.

2.14 Sensitive Land Uses

Natural England data indicates that there are no ecologically sensitive sites indicated within 1km of the site that constitute environmental receptors as defined within Table 1 of the DEFRA Environmental Protection Act 1990: Part 2A - Contaminated Land Statutory Guidance (2012).

2.15 Potential Geotechnical Constraints

A previous investigation of the site by Geo Research in January 2000 recorded Made Ground to depths of up to 4.70m bgl, overlying Till. Given the height of the proposed development (and associated heavy loads) and the thickness of Made Ground present beneath the site, it is likely that piled foundations will be required. A geotechnical site investigation would be required to confirm recommendations for foundations to support the proposed development.

The stability of the retaining wall forming the eastern boundary of the site should also be considered when designing foundations for the proposed development.

© Clancy Consulting 2021

3.0 Preliminary Risk Assessment

3.1 General

The “suitable for use” approach is adopted for the assessment of contaminated land and remedial measures are only undertaken where unacceptable risk to human health or the environment can be proven when taking into account the proposed use of the site and environmental setting.

A risk assessment process should be carried out to determine potential hazards to human health and the environment and be based on the “source” “pathway” “receptor” principal. For a potential risk to be present there must be a viable pollutant linkage whereby a contamination source may impact upon a receptor. The absence of one or more of these key components (source, pathway or receptor) prohibits a viable pollution linkage being formed.

3.2 Preliminary Conceptual Site Model

In accordance with the ‘Land contamination: risk management’ guidance on the gov.uk website (updated December 2019) and BSI 10175 “Code of Practice for Investigation of Potentially Contaminated Land” (2011), a Preliminary Conceptual Site Model was developed to identify potential contamination sources, migration pathways and receptors within the study area.

3.3 Potential Contaminant Sources

Current site use as a car park is not considered to represent a potentially significant source of contaminants of concern. However, the site was formerly used as a loading shed. Furthermore, a previous investigation of the site by Geo Research in January 2000 recorded Made Ground to depths of up to 4.70m bgl. Elevated concentrations of lead (in excess of current assessment criteria protective of human health receptors) were recorded in samples analysed from the Made Ground. Made Ground may also represent a potentially significant source of ground gas.

The area surrounding the site has had a significant industrial history, which may also represent potentially significant sources of contamination. Neighboring land use has included various works and factories, timber yards, wharves, mills and a goods rail station. An infilled canal basin is also present adjacent to the western boundary of the site.

A diecasting factory remains beyond Paradise Walk to the east of the site.

3.4 Potential Pathways

Following the proposed development, the potential risks to future site users via the dermal contact and ingestion pathways in areas of the site comprising building cover and hardstanding will be mitigated. Furthermore, the pathway for the airborne migration of soil/dust from these areas towards off-site receptors would not be active. These pathways may remain active in areas of soft landscaping. However, it is considered unlikely that these will be included as part of the development.

There is potential for the on or off-site migration of contaminants of concern within granular layers of the Made Ground.

There is potential for ground gas and volatile contaminants of concern in soil or groundwater (if present) to impact future site users via the pathway of inhalation within enclosed areas of the proposed development.

The cohesive nature of the Till beneath the site is likely to restrict the vertical migration of potential contaminants of concern beneath the site towards the deeper Chester Formation Principal Aquifer.

© Clancy Consulting 2021

3.5 Potential Receptors

Potential human health receptors include future site users and neighboring commercial and residential property occupiers.

Providing construction workers adopt appropriate levels of hygiene and personal protective equipment, they are not considered to be at significant risk from potential contaminants of concern and have not been considered further as part of this assessment.

The site is underlain by Till, classified as an Undifferentiated Secondary Aquifer. However, the site is not located within a groundwater SPZ and the nearest licensed groundwater abstraction is located approximately 650m to the southeast, used for process cooling. Therefore, this aquifer is not considered to represent a sensitive controlled water receptor.

The cohesive nature of the Till beneath the site is likely to restrict the vertical migration of potential contaminants of concern beneath the site towards the deeper Chester Formation Principal Aquifer. Therefore, this has not been considered further as a receptor.

The nearest surface water feature is the Ashton Canal, located immediately beyond the southern boundary of the site. The Rochdale Canal is located approximately 135m to the northwest. The River Medlock is located approximately 600m to the southeast. Given its distance, the River Medlock is not considered to be at significant risk from contamination sourced from the subject site.

3.6 Preliminary Risk Assessment

A preliminary risk assessment can be carried out using guidance outlined in Section 6.3 of CIRIA Document C552 “Contaminated Land Risk Assessment – A Guide to Good Practice” (2001). For a risk to be present there must be a viable pollutant linkage whereby a contamination source can impact on a receptor via a pathway. To carry out the risk assessment an estimate must be made of the potential severity of the risk and the likelihood of the risk occurring. The following Tables set out the criteria for this principal.

Table 2 - Severity of Risk

Severity	Description
Severe	Acute risk to human health likely to result in ‘significant harm’ i.e. very high concentrations of contamination or ground gases. Catastrophic damage to building i.e. by explosion from high gassing sites or VOC concentrations. Major pollution of controlled waters i.e. surface watercourses and Principal aquifers, source protection zones. Short term damage to ecosystems.
Medium	Long term risk to human health likely to result in ‘significant harm’ i.e. elevated concentrations of contaminants or ground gases. Pollution of sensitive controlled watercourses i.e. Principal or Secondary Aquifers. Significant effects on sensitive ecosystems or species.
Mild	Pollution of non-sensitive waters i.e. smaller surface watercourses or unproductive strata. Significant damage to crops, buildings, structures or services i.e. by explosion from sites with medium gassing potential, elevated concentrations of contaminants.
Minor	Non-permanent human health effects i.e. requirement for protective equipment during site works to mitigate health effects. Damage to non-sensitive ecosystems or species. Minor damage to buildings, structures or services.

© Clancy Consulting 2021

Table 3 - Probability of Risk Occurring

Probability	Description
High Likelihood	Pollutant linkage may be present that appears very likely in the short term and risk is almost certain to occur in long term or evidence of harm to receptor exists.
Likely	Pollutant linkage may be present and is likely that the risk will occur over the long term.
Low Likelihood	Pollutant linkage may be present and there is a possibility of the risk occurring although no certainty that it will do so.
Unlikely	Pollutant linkage may be present but the circumstances under which harm would occur even in the long term are improbable.

Table 4 - Comparison of Risk & Probability

Probability	Severity			
	Severe	Medium	Mild	Minor
High Likelihood	Very High	High	Moderate	Moderate/Low
Likely	High	Moderate	Moderate/Low	Low
Low Likelihood	Moderate	Moderate/Low	Low	Very Low
Unlikely	Moderate/Low	Low	Very Low	Very Low

A summary of potential pollutant linkages and perceived risks for this site are outlined in the Table below:

© Clancy Consulting 2021

Table 5 - Pollutant Linkages & Perceived Risk

Sources of Contamination	Pathways	Receptors	Severity	Probability	Risk	Justification	Further Action Required
On site: Use of the site as a loading shed. Made Ground and elevated lead concentrations recorded as part of the previous site investigation by Geo Research.	Inhalation, ingestion and dermal contact of soil	Future site users	**Medium** Long term risk to human health	**Low Likelihood**	**Moderate/Low**	Contaminants of concern may be present beneath the site, associated with the Made Ground and significant industrial history of the site. It is considered likely that these risks may be controlled via the provision of a hard surfacing and building footprint. However, this would need to be confirmed by intrusive site investigation and chemical laboratory analysis of soil samples.	Site investigation to confirm the contamination status of soils beneath the site.
		Construction workers during development	**Minor** Non-permanent human health effects i.e. requirement for protective equipment during site works to mitigate health effects	**Likely**	**Low**	If construction workers come into contact with potential contaminated soils during the construction phase, such contact would be short term, limiting potential exposure. Construction workers are expected to undertake good working practices including regular hand washing and other hygiene techniques which would reduce the likelihood of long-term exposure to any contamination. A watching brief should be in place for encountered asbestos containing material (ACM).	
	Acidic ground conditions affecting future site buildings	Building infrastructure	**Minor** Minor damage to buildings	**Low Likelihood**	**Very Low**	Made Ground and natural soils beneath the site may contain elevated concentrations of sulphates and low pH. Chemical testing for water soluble sulphate and pH should be undertaken to inform concrete classification.	
	Vertical and lateral migration	Neighbouring residential properties	**Medium** Long term risk to human health	**Unlikely**	**Low**	There is considered to be potential for any contaminants present beneath the site to migrate off-site towards neighbouring residential properties. However, these comprise multistorey apartment buildings with little or no soft landscaping at ground level. The potential risk of neighbouring site users to come into contact with contaminants sourced from the site is therefore not considered to be significant.	
		Controlled waters	**Medium** Pollution of sensitive controlled water receptors	**Low Likelihood**	**Moderate/Low**	The cohesive nature of the Till beneath the site is likely to restrict the vertical migration of potential contaminants of concern beneath the site towards the deeper Chester Formation Principal Aquifer. Furthermore, the site is not located within a groundwater SPZ and the nearest licensed groundwater abstraction is located approximately 650m to the southeast. However, there may be potential for contaminants of concern beneath the site to impact the adjacent Ashton Canal.	
Off site - Historical: Various works and factories, timber yards, wharves, mills and a goods rail station. **Off-site – Current:** Die-cast factory	Lateral migration onto site with subsequent dermal contact of soils	Future site users	**Medium** Long term risk to human health	**Low Likelihood**	**Moderate/Low**	Surround land has had a significant industrial history. There is considered to be potential for contaminants of concern from these sources to migrate onto site within groundwater in granular horizons of the Made Ground.	
Potential hazardous ground gas and vapours from deep Made Ground, including infilled canal basin to the west	Migration of ground gas	Future site users	**Severe** Acute risk to human health (asphyxiation)	**Low Likelihood**	**Moderate**	Previous investigations have recorded a significant thickness of Made Ground beneath the site. Made Ground may represent a potential source of ground gas and volatile contaminants of concern which could impact future site users via the inhalation pathway in enclosed areas.	Monitoring wells should be installed in boreholes and an assessment of the risk posed by ground gasses undertaken as part of the intrusive site investigation.
		Building Infrastructure	**Severe** Significant damage to buildings (explosion)	**Low Likelihood**	**Moderate**		

© Clancy Consulting 2021

4.0 Conclusions and Recommendations

CCL was instructed by Victor (M1) Limited to carry out a Phase 1 Preliminary Risk Assessment at as site located adjacent to the Ashton Canal at Paradise Wharf, Manchester. The site currently comprises a car park associated with an existing residential development.

It is proposed to develop the site with a four-storey residential scheme, marketed as Paradise Mews.

Current site use as a car park is not considered to represent a potentially significant source of contaminants of concern. However, the site was formerly used as a loading shed. Furthermore, a previous investigation of the site by Geo Research in January 2000 recorded Made Ground to depths of up to 4.70m bgl. Elevated concentrations of lead (in excess of current assessment criteria protective of human health receptors) were recorded in samples analysed from the Made Ground. Made Ground may also represent a potentially significant source of ground gas.

The area surrounding the site has had a significant industrial history, which may also represent potentially significant sources of contamination. Neighboring land use has included various works and factories, timber yards, wharves, mills and a goods rail station. An infilled canal basin is also present adjacent to the western boundary of the site.

Contaminants of concern may be present beneath the site, associated with the Made Ground and significant industrial history of the site. It is considered likely that these risks may be controlled via the provision of a hard surfacing and building footprint. However, this would need to be confirmed by intrusive site investigation and chemical laboratory analysis of soil samples. Made Ground may also represent a potential source of ground gas and volatile contaminants of concern which could impact future site users via the inhalation pathway in enclosed areas.

British Geological Survey mapping indicates that the site is underlain by Till, overlying the Chester Formation. Till beneath the site is classified as an Undifferentiated Secondary Aquifer. The underlying Chester Formation is classified as a Principal Aquifer. Therefore, this has not been considered further as a receptor.

The cohesive nature of the Till beneath the site is likely to restrict the vertical migration of potential contaminants of concern beneath the site towards the deeper Chester Formation Principal Aquifer. Furthermore, the site is not located within a groundwater SPZ and the nearest licensed groundwater abstraction is located approximately 650m to the southeast. However, there may be potential for contaminants of concern beneath the site to impact the adjacent Ashton Canal.

A previous investigation of the site by Geo Research in January 2000 recorded Made Ground to depths of up to 4.70m bgl, overlying Till. Given the height of the proposed development (and associated heavy loads) and the thickness of Made Ground present beneath the site, it is likely that piled foundations will be required. A geotechnical site investigation would be required to confirm recommendations for foundations to support the proposed development. The stability of the retaining wall forming the eastern boundary of the site should also be considered when designing foundations for the proposed development.

Elevated concentrations of lead have historically been recorded at the site which along with the presence of deep filled ground may preclude the use of soakaways. Depending on the views of the LPA soakaways may still be needed as part of the drainage strategy and SuDS assessment.

Potential pollutant linkages associated with the site have been identified which may be active following the proposed redevelopment of the site. A Phase 2 Environmental Site Investigation is therefore recommended to determine the contamination status of soil beneath the site and to assess the potential risk poses by ground gas. Geotechnical testing is also recommended in order to provide parameters to enable foundation, floor slab and road pavement design.

© Clancy Consulting 2021

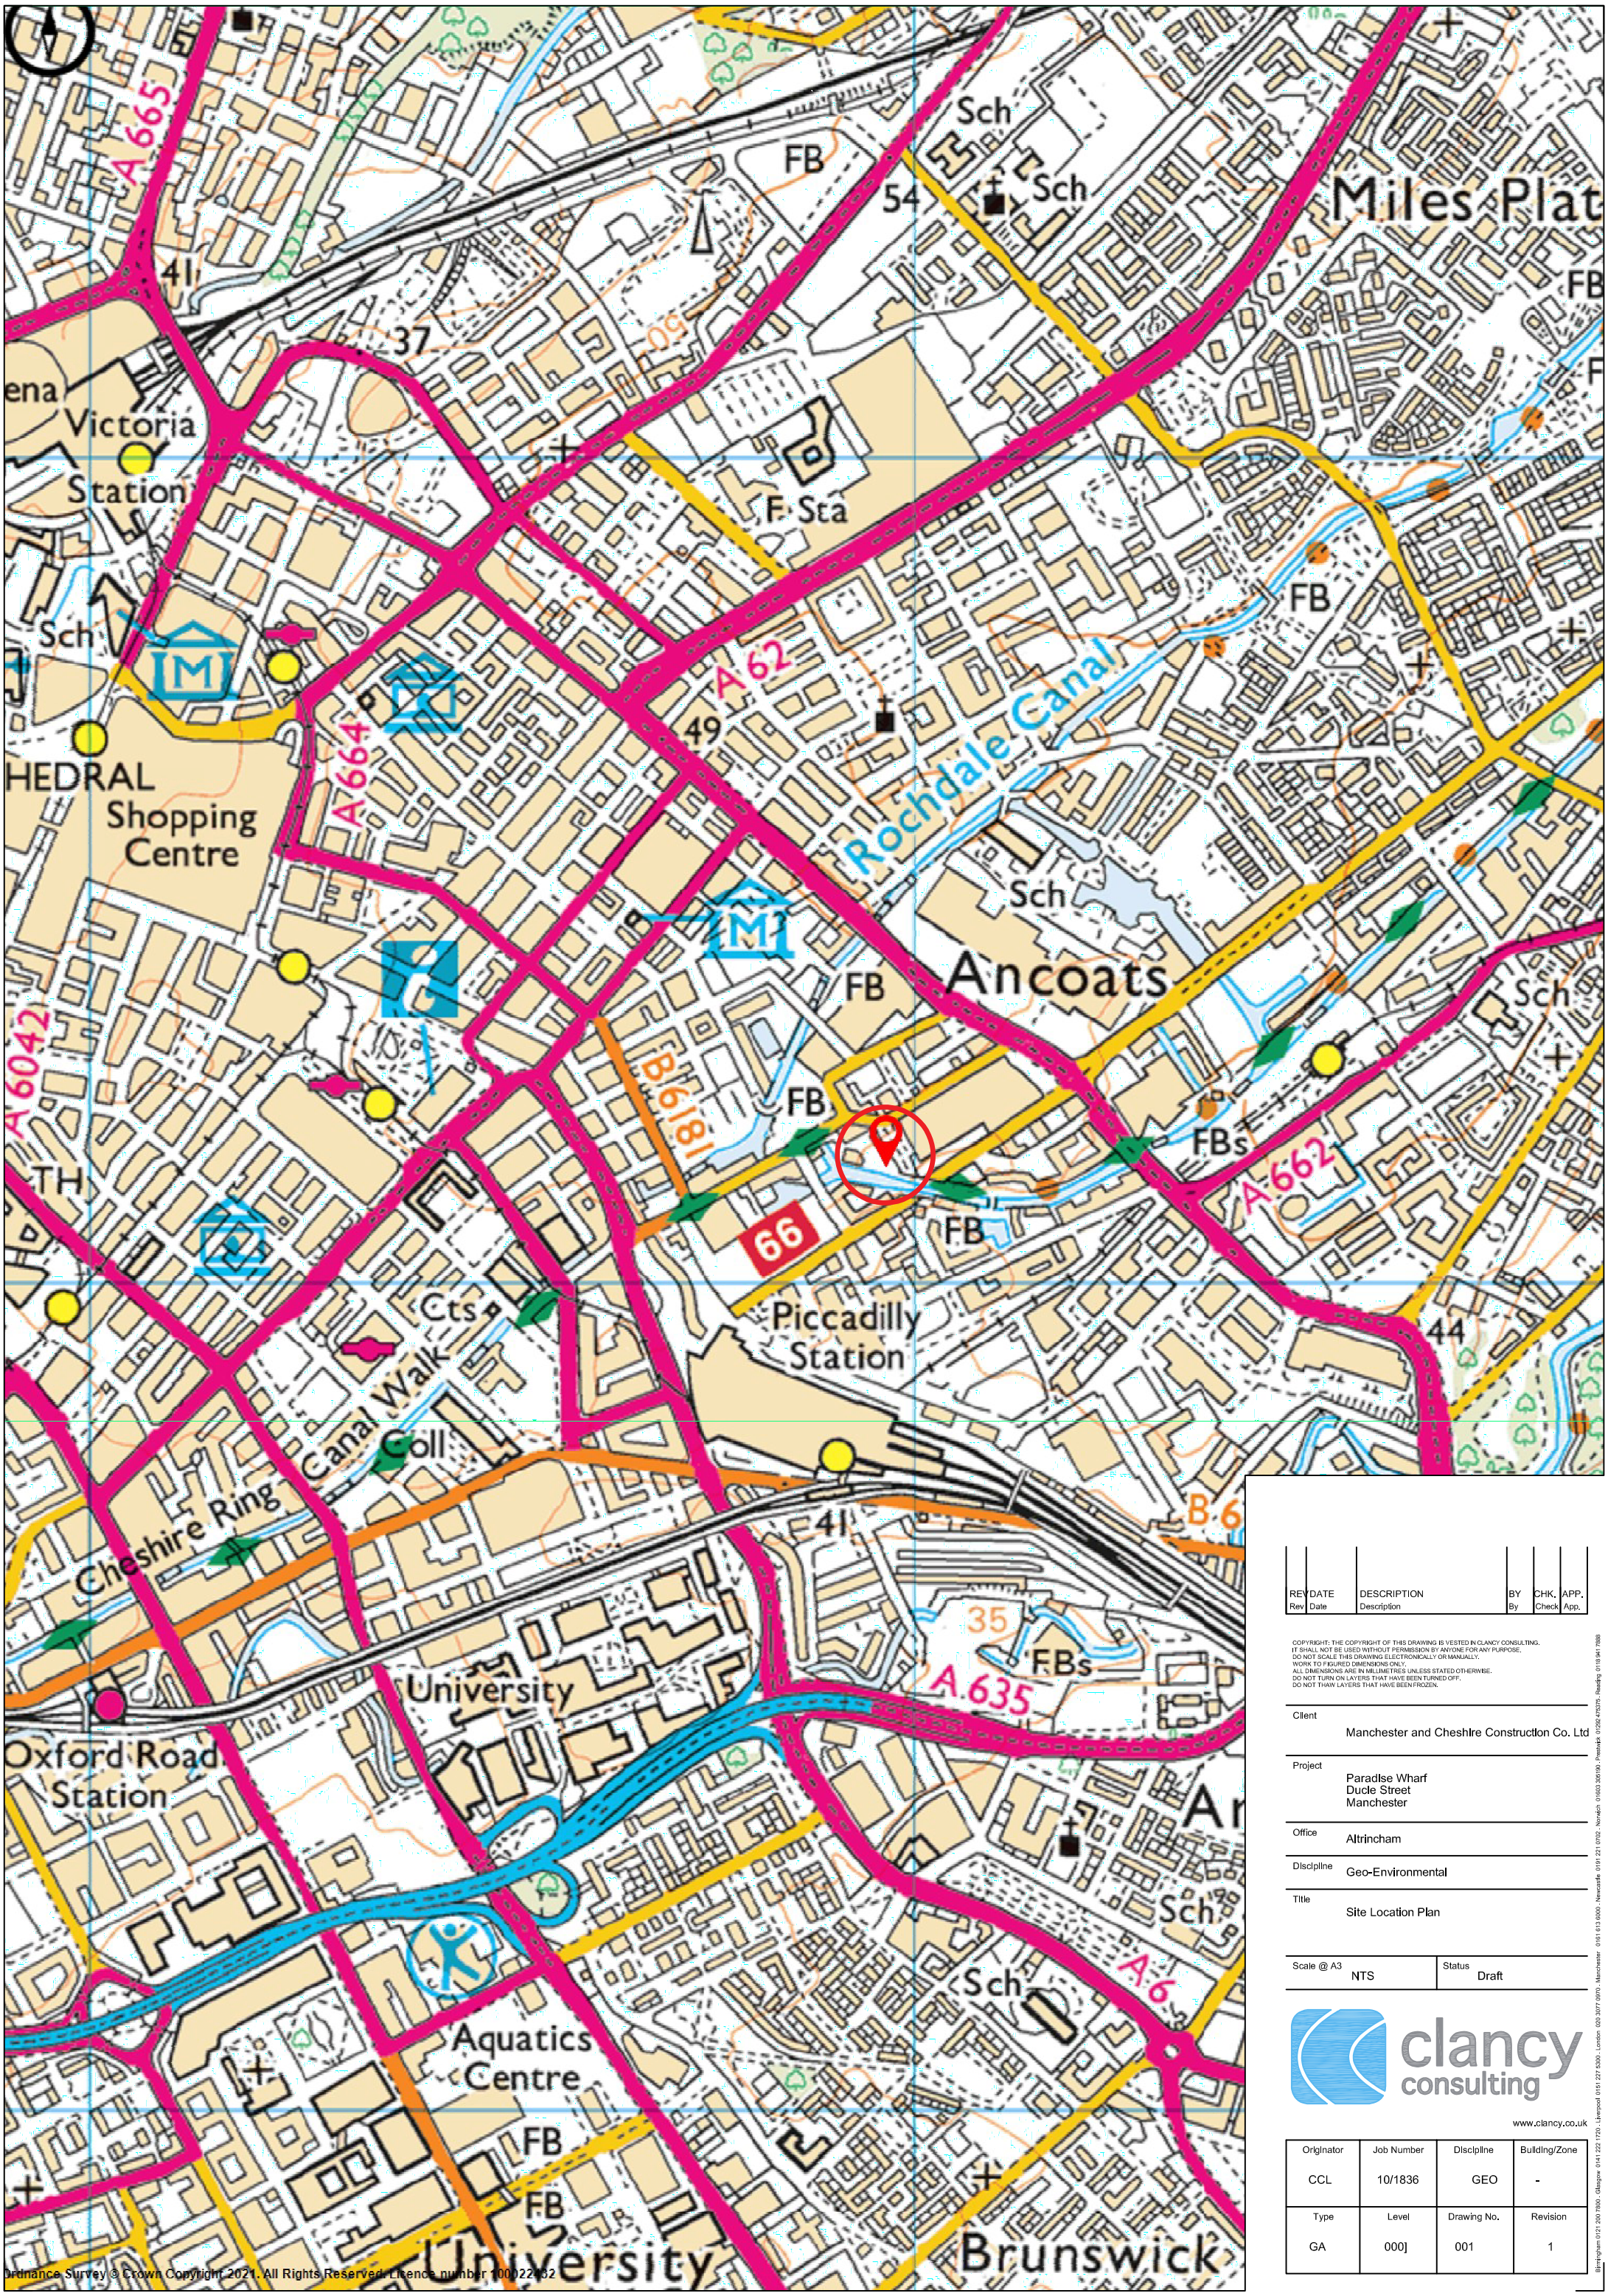

On the basis of the above, the following further works are recommended:

- Procurement of a Detailed UXO Threat Assessment report.
- Carry out an intrusive site investigation to confirm ground conditions beneath the site. Any new structures will likely require a piled foundation solution and selected boreholes should be taken to sufficient depth to allow detailed pile design.
- Installation of wells in boreholes to allow the assessment of the potential risk to future site users posed by ground gases.
- Soil samples should be recovered from selected exploratory holes and tested for potential contaminants of concern.
- In-situ testing and geotechnical soil sampling should be carried out during intrusive investigation to allow recommendations to be made for foundation and pavement design.
- The stability of the retaining wall forming the eastern boundary of the site should also be considered when designing foundations for the proposed development.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

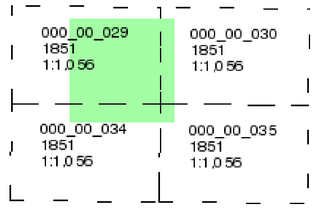

Published 1851

Source map scale - 1:1,056

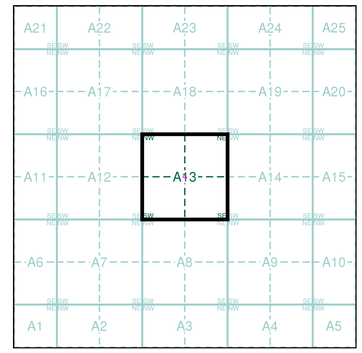

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891

Source map scale - 1:500

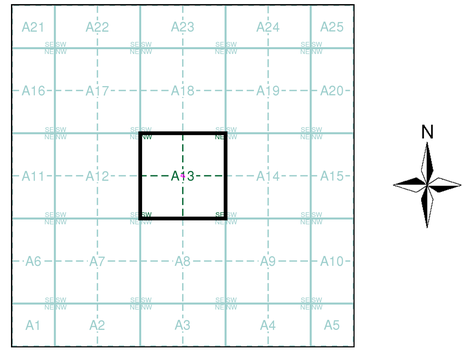

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Published 1893

Source map scale - 1:2,500

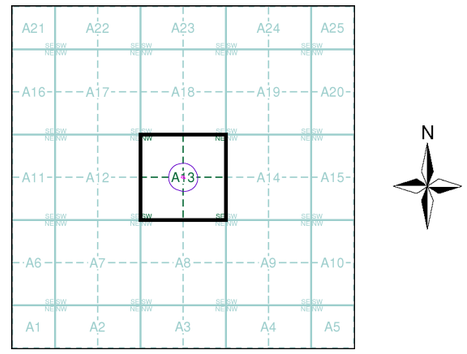

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Ordnance Survey Plan

Published 1971 - 1989

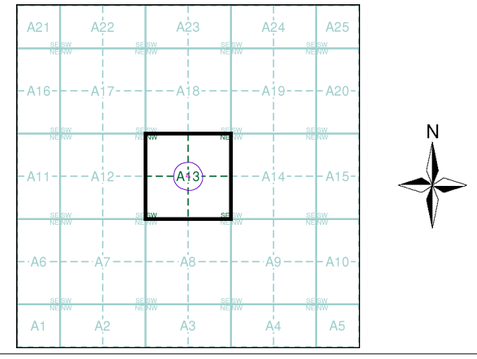

Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974 - 1976

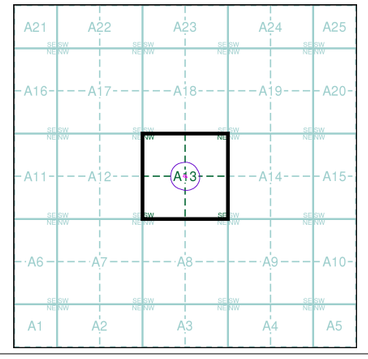

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Lancashire And Furness

Published 1848

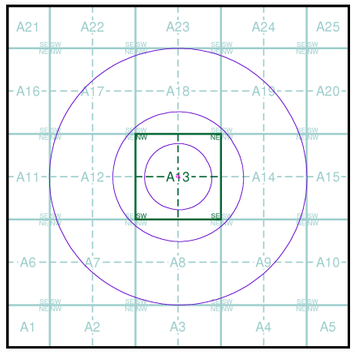

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Lancashire And Furness

Published 1909

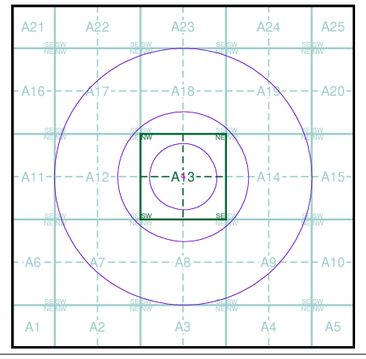

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LANDMARK INFORMATION GROUP®

Manchester

Published 1975

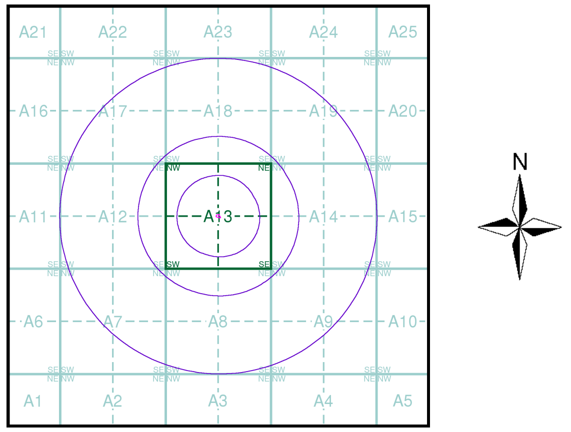

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2021

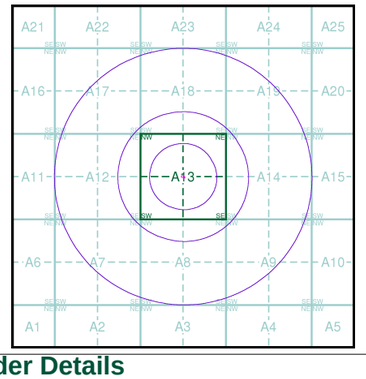

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

APPENDIX III

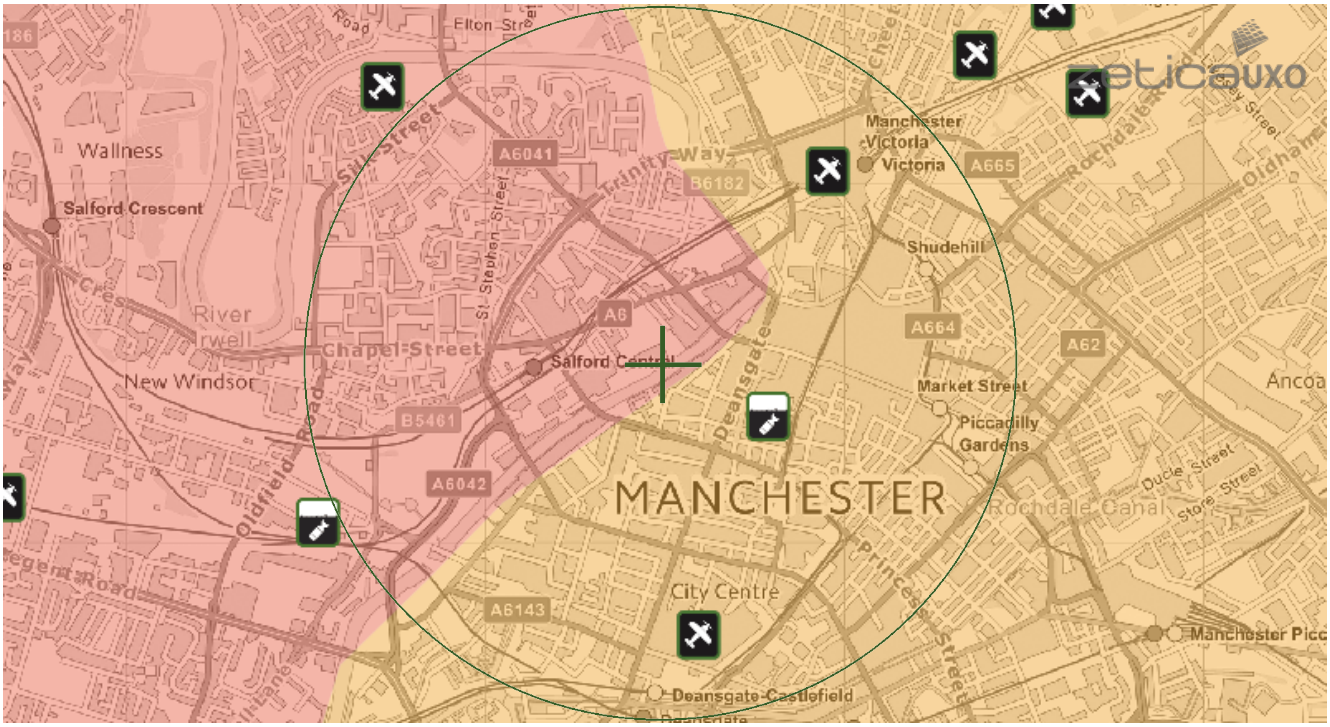

ZETICA UXO PRELIMINARY RISK MAP

UNEXPLODED BOMB RISK MAP

zeticaUXO

SITE LOCATION

Location: Manchester, Manchester
Map Centre: 383500,398500

LEGEND

High: Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.

Moderate: Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.

Low: Areas indicated as having 15 bombs per 1000acre or less.

miltary | **industry** | **UXO find**
transport | **dock** | **Luftwaffe targets**
utilities | **Bombing decoy** | **other**

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: **(https://zeticauxo.com/downloads-and-resources/risk-maps/)**

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

LANDMARK INFORMATION GROUP®

Artificial Ground and Landslip

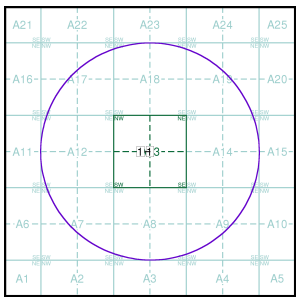

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Envirocheck®

LANDMARK INFORMATION GROUP®

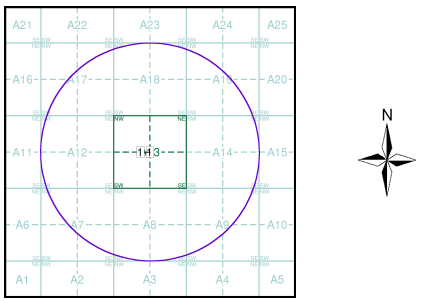

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Envirocheck®

LANDMARK INFORMATION GROUP®

Bedrock and Faults

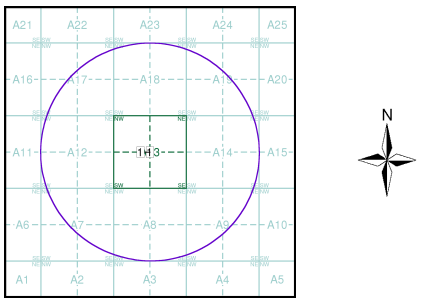

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

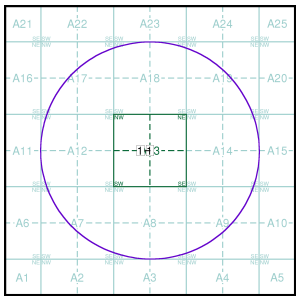

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

APPENDIX V

COAL MINING RISK ASSESSMENT

The Coal Authority

CON29M
coal mining report

PARADISE WHARF,DUCIE STREET,MANCHESTER,M1 2DE, LANCASHIRE

Known or potential coal mining risks

Past underground coal mining	Page 3
Future underground coal mining	Page 3

Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit www.groundstability.com

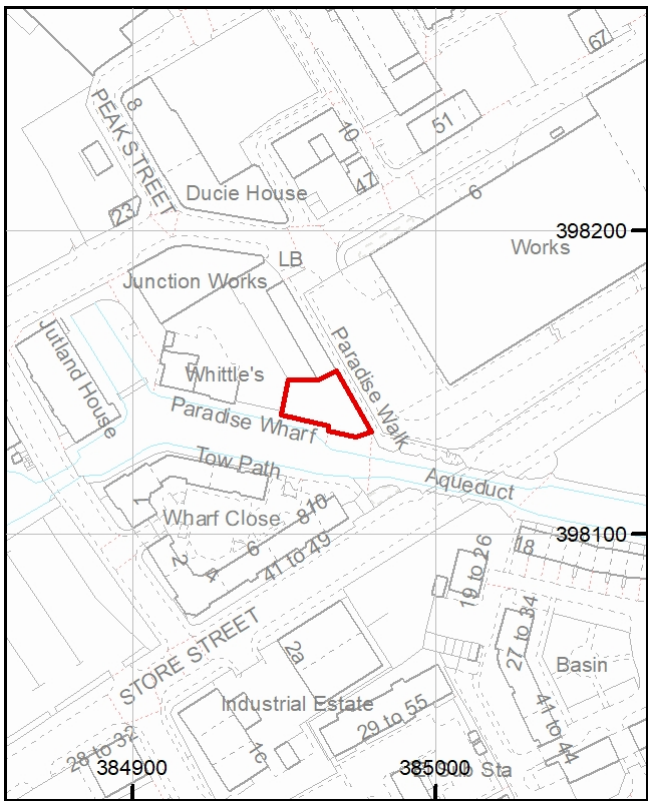

Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

Enquiry boundary

Key

Approximate position of enquiry boundary shown

We can confirm that the location is **on the coalfield**

Map data

This report is prepared in accordance with the latest Law Society's Guidance Notes 2018, the User Guide 2018 and the Coal Authority's Terms and Conditions applicable at the time the report was produced.

Accessibility

If you would like this information in an alternative format, please contact our communications team on 0345 762 6848 or email communications@coal.gov.uk.

Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 2 seams of coal at 1,050m to 1,070m depth, and last worked in 1961.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

12 Withdrawal of support

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Statutory cover

Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.
www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call 01623 646 333. Further information can be found on our website: www.gov.uk/coalauthority.

Glossary

Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

Coal Mining Subsidence Act 1991 - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

coal mining subsidence damage - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

future opencast coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

future underground coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

payments to owners of former copyhold land - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

site investigation - investigations of coal mining risks carried out with the Coal Authority's permission

stop notice - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

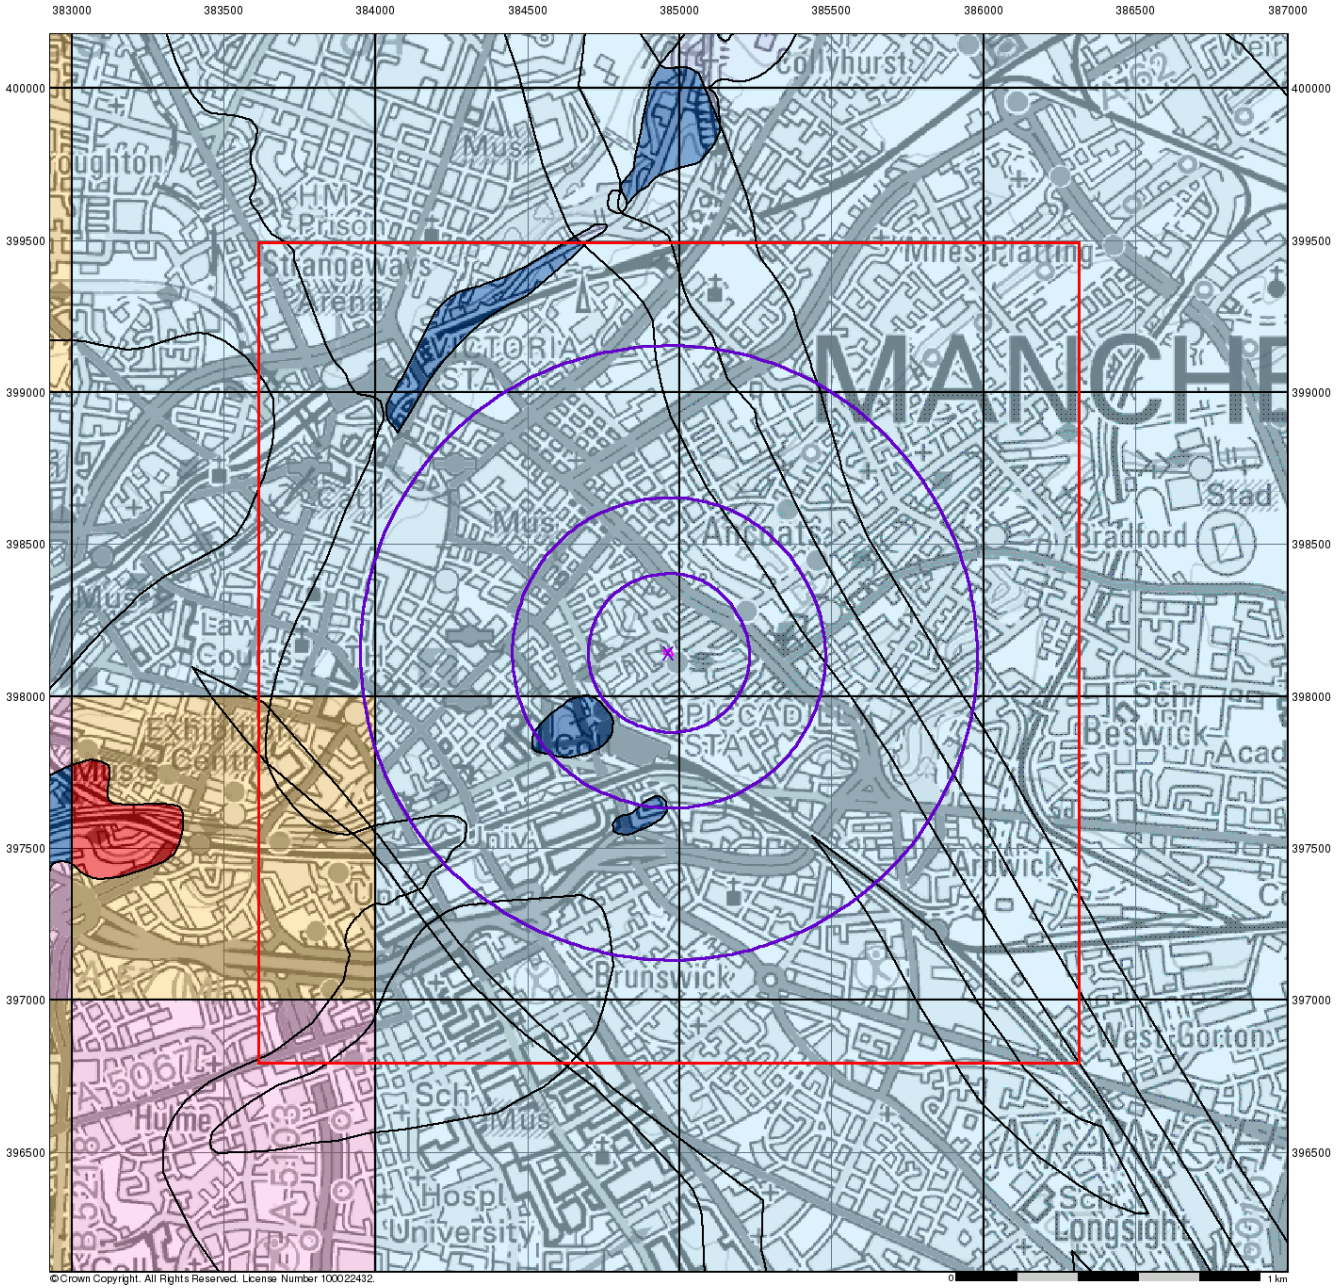

subsidence claim - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

withdrawal of support - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
