John,

636 Wilmslow Road Manchester M20 6AH - 131655/TCA/2021

The applicant has proposed to carry out the following pruning/ felling works:

T1 and T2 Beech (TPO'd) - Prune to obtain up to 3m ground clearance over the lawn and up to 2m clearance from the house walls/roof

T3 and T4 Beech - Prune to obtain up to 3m ground clearance over the lawn and public footpath. Carry out a radial crown reduction of 2-3m

What is the reasoning for the radial crown reduction?

If the radial crown reduction was to be approved, what would the estimated remaining crown spread be in metres?

T5 Lime - Remove epicormic shoots from stem and crown lift to 4m

T9 Holly - Fell to ground level. The tree is a poor specimen and has minimal future growth potential as a result of suppression from adjacent trees.

T10 Lime - Branches almost in contact with house roof - recommended 2-3m clearance by shortening of branches

I can confirm that the work would be considered general routine works and therefore we would have no objection, however, I would just like to understand the pruning spec for T3 and T4 a little better as they are highly prominent TPO worthy specimens.

Kind regards

Rudi Farghaly
