Insulated Panel Systems

QuadCore KS1000RW Roof Panel is a through-fix, trapezoidal insulated roof panel.

QuadCore KS1000RW Roof Panel is a through-fix, trapezoidal profiled insulated roof panel, which can be used for building applications with roof pitches of 4° or more after deflection. Trapezoidal is available in a width of 1000 mm.

Thanks to the prefabricated nature of the insulated panels, they are quicker to install than traditional roof structures, making the roof instantly wind and water-tight and significantly reducing construction risks.

- QuadCore Technology insulation core
- Suitable for pitched roof application of 4° or more after deflection
- Lengths from below 1.8m to 29.2m
- Optional factory-applied side and end lap weather seals
