1 INTRODUCTION

1.1 REPORT OBJECTIVE

WSP was commissioned by Russells Limited to provide a validation report for contamination-related remedial works completed during the construction phase at their 55 Portland Street site, Manchester M1 3HP (henceforth referred to as 'the site'). A site location plan is presented as Figure 1 in Appendix A.

The objective of the validation report is to demonstrate contamination-related remedial works have been completed broadly in accordance with the WSP Remediation Strategy (reference 70048672-004/11146, dated August 2018), to enable the local authority to discharge outstanding planning condition 13b, planning reference 119265/FO/218).

This report is predominantly based on information provided to WSP by Russells Construction.

1.2 CONSTRUCTION PROCESS

Site redevelopment has included demolition of the former 13-storey building and basement and construction of a 16-storey hotel with smaller basement. The former basement floor was removed, and the void backfilled with imported recycled aggregate to enable piling. Fill materials were then excavated from part of the infilled basement to generate the new slightly smaller basement.

Continuous flight auger piles (600mm diameter) were installed to depths of approximately 15 to 17m below ground level (m bgl).

All pile arising and excavated fill materials were removed from site with no segregation.

It is understood that there are no areas of soft landscaping within the new development.

Figure A below shows the former site layout (left) and recent aerial image during construction (right).

Figure A: Former (left) and New (right) Site Layout

1.3 GROUND CONDITIONS AND CONTAMINATION

Geological maps show the site is underlain by superficial deposits of Glacial Till (Boulder Clay) over sandstone of the Chester Formation.

Previous investigations (completed by others) proved Made Ground to depths of between 1.5m bgl and 5.0m bgl along the north-eastern edge of the site (outside the former building footprint).

Beneath the former basement floor Made Ground was proven to depths of 1.7m below basement floor level (m bbf) and 1.8m bbf respectively (approximately 5.8m bgl).

Along the north-eastern boundary the Made Ground comprised gravel of concrete, brick and sandstone with localised coal and 'tar' fragments. Beneath the basement, the Made Ground comprised brick cobbles. The Made Ground is likely to comprise demolition materials from previous structures on and around the site. The 'tar' recorded in the Made Ground in the eastern part of the site was considered likely to comprise fragments of asphalt / Tarmac from historical demolition.

Superficial deposits, where proven, comprised firm and stiff clay. Sandstone bedrock was encountered as weathered deposits at depths of between 9.2m bgl and 10.7m bgl and competent bedrock at depths of between 13.5m bgl and 15.0m bgl.

The following soil and groundwater conditions were identified as requiring remedial action:

- i The presence of asbestos fibres in Made Ground beneath the basement slab and beneath the north-eastern site boundary.
- i Backfilling parts of the existing basement with imported material (potential source of ground gas).
- i Disposal of excess soils to landfill.
- i Possible presence of previously unidentified contamination.

1.4 REMEDIAL REQUIREMENTS

The remedial requirements set out in the WSP Remediation Strategy and addressed in this Validation Report are summarised below:

During Ground Works

- i Awareness of potential for asbestos in Made Ground
- i Dust suppression measures to prevent exposure

Unforeseen Contamination

- i Vigilance to; and
- i Appropriate assessment of

Backfilling Basement

- i Material from a reputable supplier
- i Inert and uncontaminated materials
- i Structurally suitable

Waste Material Disposal

- i Excess arisings from piling works
- i Arisings from basement construction

Potable Water Pipes

- i Risk assessment to confirm appropriate pipe material

Validation Report

Required to include the following:

- i Details of measures taken to prevent exposure to asbestos fibres within Made Ground materials during construction
- i Information regarding unexpected contamination encountered and action taken to assess and mitigate associated risk
- i Details of imported material used to backfill the basement (volume, source, material type, confirmatory testing results)
- i If completed, details of soils imported for use in landscaped areas (volume, source, material type, confirmatory testing, depth check records)
- i Details of material re-use / treatment / off-site disposal
- i Details of potable water pipe material and justification

1.5 CONFIDENTIALITY

This report is addressed to and may be relied upon by Russells Limited.

This assessment has been prepared for the sole use of the above-named party. This report shall not be relied upon or transferred to any other parties without the express written authorisation of WSP.

No responsibility will be accepted where this report is used in its entirety, or in part, by any other party. Information provided by other is taken in good faith as being accurate. WSP cannot and will not accept liability for any deficiencies in third party information. General limitations are presented in Appendix G.

2 REMEDIATION VALIDATION

2.1 MEASURES TO PREVENT EXPOSURE TO ASBESTOS FIBRES DURING CONSTRUCTION

At the time of the WSP visit (31 May 2019), the site was observed to be surrounded by wooden hoarding, which would have provided some protection to neighbouring sites and passing pedestrians from fugitive dust generated during ground works.

At the time of the WSP visit, access to the site and groundworks areas was noted to be strictly controlled and numbers of operatives working on the site during ground works was limited, with most operatives working within excavators, lorries or other plant.

2.2 UNEXPECTED CONTAMINATION

WSP is not aware of suspected contamination being encountered during ground works.

On 13 May 2019, a brick-built well was encountered at approximately 5m below street level, extending to a depth of 24m bgl. Groundwater was resting at between 9m and 15m below the top of structure. The well was documented and reported in the University of Salford Archaeological Watching Brief Report SA/2019/43 dated May 2019. WSP provided advice in relation to the backfilling of the well, included in Appendix B. It is understood that the well was backfilled with recycled 6F2 material and topped off with two loads of gravel imported on 16 May 2019 (J. Handford and Son delivery tickets within Appendix C).

2.3 DETAILS OF IMPORTED BACKFILL MATERIAL

Demolition of the former 55 Portland Street building was completed by Northbank Demolition, Hayes Road, Cadishead, Manchester M44 5BU.

It is understood that Northbank Demolition imported recycled 6F2 materials for backfilling the basement in May 2019 and the material was obtained from:

Manchester Waste Recycling Limited
A1 waste transfer station
Agecroft Commerce Park
4 Overman Way
Swinton
Manchester
M27 8BQ

The Delivery Notes for the imported materials used to infill the basement are provided in Appendix C along with a list of reference numbers in order of appearance in the appendix. There are duplicate scans for 10 notes and two notes are for deliveries of 20mm gravel (used for backfill of the well).

Approximately 225 loads were imported to the site. Assuming 20 tonnes per load this is 4500 tonnes. At an assumed density of 1.8 tonnes per cubic metre, this works out at approximately 2500 cubic metres of fill.

WSP visited the site on Friday 31 May 2019 to observe placed fill materials and the operational piling rig. Photographs from the visit are presented in Appendix D. WSP observed tightly controlled site access and a limited number of workers within the boundary during piling rig operation.

The fill materials observed at the surface were consistent with a recycled aggregate with no obvious evidence of putrescible content (e.g. wood) or asbestos containing materials.

2.4 DETAILS OF SOILS IMPORTED FOR USE IN LANDSCAPED AREAS

WSP has been informed that there are no areas of soft landscaping within the redeveloped site.

2.5 EXCAVATIONS / PILE ARISING RE-USE / TREATMENT / OFF-SITE DISPOSAL

Arisings from piling and basement excavation were transported from site by J O'Shea & Sons Ltd (Waste Carrier Number: CBDU90839, Waste Transfer Note 3032) between June and July 2019 to the J O'Shea & Sons Ltd waste management facility at Orchard Street, Pendleton, Salford, Manchester M6 6FL (Waste Management Licence Number: EAWML50093).

The tickets for the exported materials are provided in Appendix E, along with a summary table prepared by WSP and the Waste Transfer Note. Based on the number of tickets provided, approximately 230 loads were exported from the site (4600 tonnes, 2556 cubic metres). Given the smaller basement volume and additional pile arisings, this would seem to be a sensible number.

2.6 DETAILS OF POTABLE WATER PIPE MATERIAL AND JUSTIFICATION

WSP United Utilities Pipeline Risk Assessment reference 70048672, dated 2 September 2019, is provided in Appendix F.

2.7 CONCLUSION

Based on information provided to WSP the basement infilling, pile mat construction and subsequent disposal of arisings from piling and new basement construction works have been completed as reported herein. It is understood there are no areas of soft landscaping at the redeveloped site.

Deliveries are made by our transport to the nearest point on the road to where machinery are required. Properties are made on the road and no liability is accepted for the machine after it has got on the way. If the customer requires our driver to take his vehicle over paying, on to private drives or anywhere not on the highway the customer does so at his first risk and we do hold liable for any damage to property caused by our vehicle.

No Claims for damages or lost deliveries can be entertained unless reported to us within 3 days of delivery.
Deliveries are made by our transport to the nearest point on the road to where materials are required.
Deliveries are made on the understanding that we disclaim any responsibility for the material after it has left our lorry.
The customer requires our driver to take his vehicle over paving, on to private drives or anywhere not on the highway.
The customer does so at his own risk and will be held liable for any damage to property incurred by our vehicle.

No Claims for damages or short deliveries can be entertained unless reported to us within 3 days of delivery. Deliveries are made by our transport to the nearest point on the road to where materials are required. Deliveries are made on the understanding that we disclaim any responsibility for the material after it has left our lorry. If the customer requires our driver to take his vehicle over parking, on to private drives or anywhere not on the highway, the customer does so at his own risk and will be liable for any damage to property incurred by our vehicle.

No Claims for damages or short deliveries can be entertained unless reported to us within 3 days of delivery.

Deliveries are made by our transport to the nearest point on the road to where materials are required.

Deliveries are made on the understanding that we disclaim any responsibility for the material after it has left our lorry.

If the customer requires our driver to take his vehicle over paving, on to private drives or anywhere not on the highway,

the customer does so at his own risk and will be held liable for any damage to property incurred by our vehicle.

Subject to our Terms and Conditions
