1 Introduction

1.1 Background

LK Consult Ltd (LKC) has been commissioned by BOI Trading Company Ltd to carry out a Phase 1 Preliminary Risk Assessment (PRA) for land Bury New Road / Fairy Lane, Manchester. The report was undertaken in support of a future planning application to redevelop the site for what is understood to be a mixed commercial and residential development. No proposed development plans have been provided at this stage.

According to guidance set out in CLR11[1] and the National Planning Policy Framework (NPPF)[2], a PRA with a site reconnaissance is required as a minimum to ascertain if there is a potential contamination risk.

In accordance with current guidance, the PRA will include a site reconnaissance, site history, geology, hydrogeology, hydrology, mineral search and a landfill search. Information gathered from the desk study and site reconnaissance will be used to develop a contamination conceptual model for the site, which will support the identification and assessment of any pollutant linkages.

In addition, the information gathered will be used to identify potential geotechnical constraints associated with the redevelopment of the site.

Based on the findings of this report, an appropriate site investigation can be derived, if required.

1.2 Site Details

A summary of the site details is presented in Table 1-1. Figures 1 and 2 indicate the site location and boundary.

Location	Southwest end of Fairy Lane, at the junction with Bury New Road, northwest of Manchester City Centre. Centred at approximate National Grid Reference 383340E 400050N.
Approximate Area	6500m^2.
Topography	31-34 metres Above Ordnance Datum (AOD). Site is uneven. Eastern area of site is situated higher than remainder of site.
Current Land Use	Site Site is currently comprises vacant, rough land with no buildings. A hardstood track is present in the north. Fly tipping was observed. Surrounding Area North: Fairy Lane and commercial buildings. East: Residential properties. South: Bury New Road and commercial buildings. West: Bury New Road and commercial buildings.
Proposed Development	Mixed use development comprising ground floor retail/commercial units with several storeys of one-bed and two-bed apartments above potentially extending up to 5/6 storeys. It is presumed that shared soft landscaping is proposed.

Table 1-1: Summary of the site details.

2 Site History

In compiling the site history, LKC consulted historical mapping provided by the Landmark Information Group Ltd. Copies of relevant historical plans are provided in Appendix A and are summarised Table 2-1. Notable potentially contaminated features within 100m of the site boundary have been presented (distances will be approximate). The exception to this will be potentially significant features within a 250m buffer that could be infilled historically.

Site Features	Location	Map Dates Present	Comments
Fountain Place and referenced Buildings	SW	1850 only	- Only annotated on 1820 Town Mapping - With associated gardens.
Brick Field / Old Clay Pits	NW-NE	1848-1938	- Site forms part of wider brick field on 1848 mapping. - Site is associated with an extensive area of clay pits associated with offsite brick works. - No longer annotated by 1952 mapping, potentially infilled
Footpath	NE	1890-1894	- No longer annotated by 1908 mapping.
Street	S	1890-1956	- Annotated as 'Bedford Street' between 1891-1908 mapping, - Annotated as 'Trafalgar Street East' by 1923 mapping.
Residential Terraces	SW & NE	1890-1968	- Row of residential terraces along SW boundary of site. - A further row of terraces noted by 1908 mapping in the NE of site. - No terraces annotated by 1973 mapping.
Cuttings	SE	1890-1992	- No longer annotated by 2003 mapping, potentially infilled.
Cannonsleigh Close	N	1983-present	- Road orientated in an approximate N-S direction on site.
Surrounding Area Features	**Distance / Location**	**Map Dates Present**	**Comments**
Reservoir	170m N	1848-1933	- Associated with 'Brick Works'. - Reduction in size noted on 1923 mapping. - No longer annotated by 1952 mapping, potentially infilled.
Pond	170m N	1848-1933	- Likely associated with 'Brick Works'. - No longer annotated by 1948 mapping, potentially infilled.
Reservoir	240m N	1848-1908	- No longer annotated by 1923 mapping, potentially infilled.
Brick Field / Old Clay Pits	Adj to N	1848-1938	- Associated with brick works with associated ponds. - No longer annotated by 1952 mapping, potentially infilled
Pond	25m NE	1890 only	- No longer annotated by 1893 mapping, potentially infilled.

Table 2-1: Summary of the historical features.

Surrounding Area Features	Distance / Location	Map Dates Present	Comments
Excavations	95m SE	1890-1894	- No longer annotated by 1908 mapping, potentially infilled.
Pond	75m NE	1890-1894	- No longer annotated by 1908 mapping, potentially infilled.
Stream	20m N	1890-1931	- Annotated as flowing SW and likely associated with 'Old Clay Pits'. - No longer annotated by 1933 mapping, potentially infilled.
Tramway	5m W	1890-1933	- Replaced by 'Bury New Road' by 1948 mapping.
Excavations / embankment	10m SE	1890-1992	- No longer annotated by 2003 mapping, potentially infilled.
Engraving Works	35m SW	1908-1933	- Annotated as 'Albert Works' on 1890-1893 mapping. - No longer annotated by 1948 mapping.
Clothing and Cabinet Works	80m W	1908-1964	- Annotated as 'Clothing and Cabinet Works' until 1948 mapping. - Annotated as 'Clothing Factory' by 1952 mapping, with associated tanks and chimneys. - No longer annotated by 1973 mapping.
Mantle Factory	90m SW	1933-1961	- Annotated as 'Factory' on 1961 mapping. - No longer annotated by 1964 mapping.
Bedding Factory	80m S	1951-1961	- No longer annotated by 1964 mapping.
Factory	55m S	1951-1961	- No longer annotated by 1964 mapping.
Electricity Sub Station	85m SW	1951-1996	- No longer annotated on 'Clothing Factory' on 1951 mapping only.
Gravel Pit	185m NE	1952-1956	- No longer annotated by 1964 mapping, potentially infilled.
Pond	135m NE	1952-1956	- No longer annotated by 1964 mapping, potentially infilled.
Gravel Pit	205m NE	1952-1964	- No longer annotated by 1978 mapping, potentially infilled.
Works	25m N	1964-1978	- No longer annotated by 1984 mapping.
Garage	15m NW	2020 only	- Footprint of building only present on 2020 mapping.

Table 2-1 Continued: Summary of the historical features.

3 Environmental Setting

In compiling this Section, LKC consulted environmental information provided by the Envirocheck Report (Appendix B), British Geological Survey (BGS) (Appendix C), the Coal Authority, Zetica UXO (Appendix D), Natural England and the Environment Agency. A summary is presented in Table 3-1.

Categories(data sources)			Details
Geology	Artificial[1]		- Infilled Ground recorded over most of the site. - Large area of Infilled Ground recorded immediately NE of site.
	Superficial[1]		- Till across majority of site. - Alluvium deposits (Clay, Silt, Sand and Gravel) in the southern corner of site. - Potential River Terrace Deposits (Sand and Gravel) along the NW boundary. - Potential Glaciofluvial Deposits (Sand and Gravel) along N site boundary.
	Bedrock[1,2]		- Chester Formation (Sandstone). - 1 fault (Ardwick Fault) on site along E site boundary, striking NW-SE with a downthrow to the E.
	BGS Logs[3]		- BH Ref: SD80SW368, onsite SW: made ground to 2.97mbgl, soft brown/yellow/grey mottled slightly sandy silty CLAY with occasional pebbles to 4.62mbgl. - BH Ref: SD80SW369, 8m NW: made ground to 1.67mbgl, very soft to soft brown/grey silty sandy CLAY with organic remains to 4.52mbgl.
Hydro-geology[1]	Aquifer Designation	- Superficial	- Secondary A / Undifferentiated Aquifer.
		- Bedrock	- Principal Aquifer.
	Source Protection Zone (SPZ)		- Site is not within an SPZ.
	Groundwater Abstractions		- None within 250m. - Nearest 541m SE: Operated by 'Lancashire Dairies Ltd'. Abstraction for dairies (drinking, cooking, sanitary, washing – small garden). No longer in use.
Hydrology[1]	Nearest Surface Water		- 300m SE, River Irwell.
	Water Quality Data		- 718m SW, River Irwell – River Quality E.
	Flooding		- No risk from rivers or sea. - Potential for groundwater flooding of property situated below ground level.
	Surface Water Abstractions		- None within the Envirocheck search area of 1km.
	Discharge Consents		- 2 within 250m. - Nearest 235m NW: Operated by 'United Utilities Water Limited'. Consent to discharge storm water overflow into an unknown receiving water. Surrounded under EPR 2010.

Table 3-1: Summary of the environmental setting.
Data Sources: **1** – Envirocheck Report (Appendix B); **2** – BGS Sheet 85 1:50,000; **3** – BGS GeoIndex http://mapapps2.bgs.ac.uk/geoindex/home.html (Appendix C);

Categories(data sources)		Details
	Pollution Incidents	- 1 within 250m. - 104m E: 3rd April 1996, Category 3 (Minor Incident) involving an unknown pollutant and unknown receiving water.
Minerals & Mining	Coal Report	- N/A.
	Coal Mining Development High Risk Area (DHRA)[4]	- Not within DHRA.
	Surface Extractions[1]	- 4no. recorded mineral sites within 500m of the site. - Nearest 154m NE: 'Fairy Lane Brickworks'. Involved the opencast extraction of common clay and shale. Operations have ceased.
	Cheshire Brine Compensation District[1,5]	- N/A.
	Mining Instability / Non-Coal Mining Area[1]	- Site is within an area that may be affected by coal mining activities. - No hazard from non-coal mining activities. - Natural Cavity recorded 444m W (piping in non-cohesive deposits).
Ground Stability (onsite)[1]	Collapsible Ground	- No to very low hazard.
	Compressible Ground	- No to moderate hazard. - Moderate hazard recorded in SE and SW of site.
	Ground Dissolution	- No hazard.
	Landslide	- Very low hazard.
	Running Sand	- Very low to low hazard.
	Shrinking / Swelling Clay	- No to very low hazard.
Landfill Sites[1]	Known / Registered	- 1 within 250m: - 55m N – 'Land Fairy Lane'. Deposited waste type including commercial and household waste. Operational dates not supplied.
	Potential	- 16 within 250m: - Brick Field/ old clay pits onsite and occupying large area immediately N of site potentially infilled by 1952 mapping. - 2no. reservoirs 170-240m, potentially infilled between 1923-1952 mapping. - 4no. ponds 25-170m, potentially infilled between 1908-1964 mapping. - 2no. gravel pits 195-205m, potentially infilled between 1964-1978 mapping. - Stream 20m N, potentially infilled by 1933 mapping. - Excavations / cuttings / embankments, onsite to 95m, potentially infilled between 1908-2003 mapping. - Infilled ground recorded on site, infill date unknown.
Radon[1]		- Probability of <1% of homes above Action Level. No further action required.

Table 3-1 Continued: Summary of the environmental setting.

Data Sources: **1** – Envirocheck Report (Appendix B); **2** – BGS Sheet 85 1:50,000; **3** – BGS GeoIndex http://mapapps2.bgs.ac.uk/geoindex/home.html (Appendix C); **4** - The Coal Authority Web Mapping Services (WMS) and Interactive Map Viewer http://coal.decc.gov.uk/en/coal/cms/publications/data/map/map.aspx **5** – Cheshire Brine Subsidence Compensation Board Compensation District & Consultation Areas http://www.cheshirebrine.com/wp-content/uploads/2016/11/NL08134-001-002.pdf;

Categories(data sources)	Details
Designated Sites[1]	- Nitrate Vulnerable Zone on site.
Contemporary Trade Directory[1]	- 3 within 100m. - Nearest 21m NW: 'Halford Autocentre' – garage services. Currently active.
Fuel Station Entries[1]	- None within 100m. - Nearest 144m S: 'Broughton Lane Service Station'. Currently open.
Unexploded Bomb Risk (UXO)[6]	- Moderate. - A Pre-Desk Study Assessment undertaken for the site concluded that a detailed study is recommended to further assess and potentially zone the risk (see Appendix D).

Table 3-1 Continued: Summary of the environmental setting.
Data Sources: **1** – Envirocheck Report (Appendix B); **6** – Zetica UXO Unexploded Bomb Risk Map and Pre-Desk Study Assessment (Appendix D).

4 Site Reconnaissance

A site reconnaissance was carried out on 21st February 2020. Hand dug trial holes were undertaken in accessible areas to confirm the shallow ground conditions.

An annotated plan with photographs, and trial hole descriptions is provided in Appendix E.

Relevant features identified on site are summarised below:

- The site is currently vacant and comprises rough ground with overgrown grass and brambles. A hardstanding track is present in the north of the site. Trees are present along the eastern boundary.
- The site is topographically higher than land to the south. The eastern area of the site is located slightly higher than the remainder of the site.
- The site surface was noted to be uneven with undulations across the surface of the site.
- Access to the site is via a gated entrance with no restrictions for site investigation noted. A key is required to access the site which is provided by the client.
- Fly tipping was noted across the site.
- A sewer is present in the north of the site (four manholes notes).
- Made ground was observed, which contained rootlets, brick, ash, clinker, glass, concrete and rubber to 0.40mbgl. Natural ground was not identified.

The surrounding area comprises:

- North: Fairy Lane and commercial buildings.
- East: Residential properties.
- South: Bury New Road and commercial buildings.
- West: Bury New Road and commercial buildings.

5 Preliminary Conceptual Model

5.1 Introduction

The aim of the conceptual model is to provide a preliminary assessment of the likelihood of a pollutant linkage for each potential combination of contaminant, pathway and receptor. A conceptual model can be used to make an informed decision on the contamination risks associated with the site and whether further site investigation work is required.

The Sections below are therefore divided into potential contaminant, potential pathway and potential receptor as described in CLR11[3], on the premise that, if there is no pollutant linkage, then there will be no risk to the receptor. The final Section provides an assessment of the potential pollutant linkages that may still be present on the site if redevelopment were to occur.

5.2 Potential Contaminants

Potential contamination sources are detailed in Table 5-1.

Source	Contaminants
Onsite former buildings	- Asbestos Containing Material (ACM).
Onsite made ground (former clay pits / brick fields, potentially infilled former basements, former road, footpath and Cannonsleigh Close, general made ground)	- Ash and clinker (e.g. from hearths and boilers, often historically used for site raising / levelling): Heavy metals, sulphates and PAHs. - Other unknown inorganic / organic contaminants (dependant on fill material source). - If significant depth of organic / putrescible material: Hazardous gas (principally carbon dioxide and methane).
Offsite and onsite potentially infilled ground within 250m (infilled ground recorded on site, large areas of brick fields / clay pits, potentially infilled basements from former terraces onsite, offsite and onsite brick fields, ponds, reservoirs, stream, excavations/cuttings/embankments, gravel pits)	- Hazardous gas (principally carbon dioxide and methane).
Offsite former electricity sub station	- Polychlorinated biphenyl (PCBs) and transistor oils. - Not expected to pose significant risk to site due to distance. PCBs are relatively immobile.

Table 5-1: Potential contamination sources.

[3] Defra (2004). “Model Procedures for the Management of Land Contamination”. R&D Publication CLR 11.

Source	Contaminants
Surrounding industries (former mantle works, former cabinet and clothing works, former factories, garage)	- Metals, inorganic compounds and organic compounds. - Not expected to be as significant as identified onsite sources.
Underlying Alluvium Deposits Onsite and Offsite	- Ground Gas (expected to be at low flow rates).

Table 5-1 Continued: Potential contamination sources.

5.3 Potential Receptors

Potential receptors are detailed in Table 5-2.

Receptors	
Human Health	- Future site users (including residents, visitors and site workers). - Offsite land users.
Controlled Waters	- Principal Aquifer (bedrock) - Secondary A / Undifferentiated Aquifer (superficial). - River Irwell 300m SE is not considered to be a significant receptor given the distance from the site.
Buildings and structures.	
Potable water pipes.	
Flora within future gardens and landscaping.	

Table 5-2: Potential receptors.

5.4 Potential Pathways

Potential pathways are detailed in Table 5-3.

Pathways		
Soil	Human Health[4] (mixed commercial and residential land use with assumed shared landscaping)	- Ingestion of soil. - Ingestion of soil-derived indoor dust. - Dermal contact with soil. - Dermal contact with soil-derived indoor dust. - Inhalation of soil-derived outdoor dust. - Inhalation of soil-derived indoor dust. - Inhalation of vapours outside. - Inhalation of vapours inside. - Omitted as no private gardens: ingestion of contaminated vegetables and ingestion of soil attached to vegetables.
	- Windblown dust and fibres to adjacent receptors.	
	- Direct contact with receptors (building foundations, services).	
	- Root uptake.	

Table 5-3: Potential pathways.

[4] EA (2008). "Updated Technical Background to the CLEA Model". Science Report – SC050021/SR3.

Pathways	
Water	- Surface run-off over impermeable surface.
	- Site is predominantly hardstood; therefore, infiltration is likely to be limited.
	- Migration through potentially permeable strata and preferential pathways. - Superficial (Till, sand, gavel, silt and clay) likely to be variably permeable. - Bedrock (sandstone) likely to be relatively permeable. - Preferential pathways: fault on site, services.
Gas	- Migration through potentially permeable strata and preferential pathways. - Superficial (Till, sand, gavel, silt and clay) likely to be variably permeable. - Bedrock (sandstone) likely to be relatively permeable. - Preferential pathways: fault on site, services.
	- Migration into buildings (e.g. via services) and accumulation of gases in confined spaces (potentially causing explosion if methane is present).

Table 5-3: Potential pathways.

5.5 Preliminary Contamination Conceptual Model

The Preliminary Contamination Conceptual Model is illustrated in Table 5-4 and has identified seven generic potential pollutant linkages.

Each linkage is described along with an assessment of the risk based upon guidance on probabilities and consequences outlined in CIRIA C552[5].

In order to assess the potential risk for each pollutant linkage, an assessment of the magnitude of the potential consequence (severity) of the risk occurring and the magnitude of the probability (likelihood) of the risk occurring has been considered and classified. This is based on the guidance provided in CIRIA C552 and further details including a risk matrix is provided in Appendix F.

Where LKC identified a low to very low risk, limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk, intrusive work or precautionary remedial measures will be recommended.

It should be noted that there may be risk from short term exposure from contaminated soil to site workers. The Preliminary Contamination Conceptual Model deals with long term exposure to key receptors. Acute risks can be easily mitigated by good environmental management of the site during site works. Standard health and safety precautions (as per HSE guidance[6]) should be adopted by all workers involved with site enabling and construction works. Therefore, this receptor is not considered in the contamination conceptual model.

[5] CIRIA (2001). “Contaminated Land Risk Assessment: A Guide to Good Practice”. C552.
[6] HSE (1991). “Protection of Workers and the General Public During Development of Contaminated Land”. London HMSO.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment & Recommendations
PL1	- Dermal contact. - Inhalation of soil, fibres and dust. - Ingestion of soils, dust. - Windblown dust.	- Future site users. - Offsite receptors.	- ACM (former buildings, potentially in made ground). - Heavy metals, PAHs, hydrocarbons, other inorganic and organic contaminants (made ground, former roads, footpath, recorded infilled ground, potentially filled clay pits/ brick field and excavations).	Likely	Medium	**Moderate**	- Likely given history of site, identified ashy made ground and deep made ground proven on site from historical BGS boreholes. - **Recommendation**: Intrusive investigation required to include soil sampling.
PL2	- Inhalation of vapours. - Migration through permeable strata and preferential pathways.	- Future site users. - Offsite receptors.	- Volatile contaminants such as hydrocarbons, solvents (made ground, former roads, footpath, recorded infilled ground, potentially filled clay pits/ brick field and excavations).	Likely	Medium	**Moderate /** Low	- Low likelihood as significant ant spillages / leakages of volatile contaminants not anticipated. - Moderate risk assumed as underlying non-cohesive deposits in the N may permit migration of volatile contaminants, and due to unknown nature of infilled ground on site. - **Recommendation**: Intrusive investigation required. No testing required unless evidence of volatile contaminants identified in the ground.
PL3	- Inhalation of gas. - Migration through permeable strata and preferential pathways. - Explosion in confined spaces.	- Future site users. - Buildings. - Offsite land users.	- Hazardous Gas: - Methane, carbon dioxide (potentially infilled features 250m of the site).	Likely	Severe	**High**	- Likely given significant viable onsite and offsite sources identified. Underlying sandstone bedrock and non-cohesive superficial deposits in S may permit migration of hazardous gas. - **Recommendation**: Gas monitoring required.
			- Ground gas: - Methane, carbon dioxide (underlying Alluvium deposits)	Low Likelihood	Severe	Moderate **/ Low**	- Low likelihood as flow rates from alluvium likely to be low. - Moderate risk assumed at this stage due to unknown ground conditions across majority of site. Organic ground proven in SW of site from BGS logs. - **Recommendation**: Gas monitoring is required to investigation the risk associated with hazardous gas, therefore any potential risk from ground gas will also be investigated as part of PL3 for hazardous gas.
PL4	- Surface run-off. - Migration through permeable strata and preferential pathways. - Perched waters migration.	- Groundwater (Principal Aquifer and Secondary A/ Undifferentiated). - Surface water (No significant receptor).	- Mobile contaminants such as metals, PAHs, hydrocarbons, volatile compounds (made ground, infilled clay pits, infilled brick field).	Likely	Medium	**Moderate**	- Likely given site history and as underlying sandstone bedrock and non-cohesive superficial deposits may permit migration of mobile contaminants. - **Recommendation**: Intrusive investigation required. Groundwater sampling recommended.

Table 5-4: Preliminary Contamination Conceptual Model.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment & Recommendations
PL5	- Sulphate attack on concrete.	- Building structure.	- Sulphate (ash identified in made ground).	Likely	Mild	**Moderate / Low**	- Likely as ash was identified in made ground, which may be in contact with concrete used in future buildings. - Moderate risk assumed at this stage. - **Recommendation**: Intrusive investigation required as part of PL1.
PL6	- Ingestion of tainted water supply.	- Future site users. - Water pipes.	- Organic contaminants such as hydrocarbons, solvents (made ground, infilled clay pits, infilled brick field).	Likely	Medium	**Moderate**	- Likely as significant contamination considered possible at pipeline depth (0.75-1.35m) given site history. Deep made ground (>2.00mbgl) identified in BGS borehole in SW of site. - **Recommendation**: Intrusive investigation to include soil sampling.
PL7	- Direct contact (plant uptake).	- Flora.	- Phytotoxic contaminants (made ground).	Likely	Minor	**Low**	- Likely as contamination considered possible, which may be taken up by flora in any proposed soft landscaping. - **Recommendation**: Investigation work as part of PL1.

Table 5-4 Continued: Preliminary Contamination Conceptual Model.

6 Preliminary Geotechnical Risk Assessment

The bedrock geology is mapped as sandstone overlain by mainly superficial Till deposits. Alluvium deposits (Clay, Silt, Sand and Gravel) are recorded in the southern corner of site. There is a potential for River Terrace Deposits (Sand and Gravel) along the NW boundary and Glaciofluvial Deposits (Sand and Gravel) along N site boundary according to BGS maps. A limited trial hole survey identified made ground comprising sandy clay with rootlets, brick fragments, ash, clinker, glass, rubber and concrete to 0.40mbgl. Natural ground was not identified. Given the history of the site and onsite historical BGS borehole logs, significant made ground is anticipated.

With regards to ground stability, the Envirocheck Report identified:

- Collapsible Ground: No to very low hazard.
- Compressible Ground: No to moderate hazard.
- Ground Dissolution: No hazard.
- Running Sand: Very low to low hazard.
- Shrinking / Swelling Clay: No to very low hazard.

A moderate risk of compressible ground was identified in the northwest of the site; this is likely to be associated with glaciofluvial and river terrace deposits (sand and gravel) in this area.

The following need to be considered and investigated before any construction work commences:

- Deep made ground and / or relic in-ground structures (from potentially infilled ground, former buildings, road) may be present on site which could affect groundworks (e.g. grubbing out of structures) and type of foundations required (e.g. deepening of foundations / pilling).
- The strength and variability of superficial deposits need to be confirmed. An allowable bearing pressure of the soils should be confirmed to allow the design of suitable foundations. Soft ground identified on site from historical BGS borehole (organic clays to 4.6mbgl)
- The depth of groundwater and variability of the water table should be confirmed as shallow / fluctuating groundwater can affect the strength of the soil, particularly in granular ground.
- Plasticity of clay deposits should be confirmed, particularly where trees are present or proposed, to identify the shrinkability risk.
- The CBR value of the ground for footpath and road design should be calculated. There is a potential for low / poor CBR values from underlying clay, therefore site roads may require the import of suitable granular material or modification of existing clay soils.
- Sulphate content of the made ground and natural ground should be confirmed to assess the concrete requirements.

7 Summary Conclusions and Recommendations

7.1 Summary Conclusions

No proposed plans have been provided at this stage, but it is understood that the development will likely comprise mixed commercial and residential use with retails units and residential apartments.

The site has historical been used for residential purposes, with rows of terraces identified across site between the late 1800's and mid 1900's. Prior to this, the site was vacant and formed part of wider brick field with and a clay pit occupying much of the eastern part of the site.

The surrounding area has mainly been development for industrial and commercial purposes. A large area to the east and northeast of the site was occupied by extensive brick fields and clay pits.

The site currently comprises vacant, rough open ground. Made ground was observed during the site reconnaissance as well as fly tipping.

Potential contamination sources affecting the site were identified as heavy metals, PAHs, sulphate, asbestos, hydrocarbons and gas (carbon dioxide and methane).

These contaminants may pose a risk to site users (via dermal contact, inhalation pathways and explosion), controlled waters (via migration through permeable strata and preferential pathways), buildings and structures (direct contact and explosion), water pipes (direct contact) and flora (root uptake).

A contamination conceptual model has been produced by LKC. This has identified the following risks summarised in Table 7-1.

	Pollutant Linkage	Risk	Recommendations
1	Contaminants posing a risk to future site users via dermal contact, ingestion and inhalation (of soil, dust, fibres and vegetables).	**Moderate** (ACM, PAHs, metals, hydrocarbons, other organic / inorganic)	Investigation work required to include soil sampling.
2	Volatile contaminants posing a risk to future site users via the inhalation of vapours.	**Moderate /** Low	Investigation work and sampling not required unless evidence of volatile contamination identified.
3	Gas posing a risk to buildings and future site users via the migration of gas into building causing explosion and asphyxiation.	**High** (Hazardous Gas) **Moderate /** Low (Ground Gas)	Gas monitoring required.
4	Mobile contamination posing a risk to controlled waters via the migration through permeable strata.	**Moderate**	Groundwater sampling required.
5	Sulphate posing a risk to building via direct contact (sulphate attack).	**Moderate /** Low	Investigation work required to include soil sampling.
6	Organic contaminants posing a risk to water pipes.	**Moderate**	Investigation work required to include soil sampling.
7	Phytotoxic metals posing a risk to flora via root uptake.	**Low**	Investigation work recommended as part of PL1.

Table 7-1: Summary risk table.

The preliminary geotechnical assessment has also identified the following potential risk which will need to be investigated:

- Possible deep made ground with in-ground structures. Possible soft / organic material.
- Unknown strength of superficial deposits for foundation design.
- Depth and variability of the water table.
- Plasticity of any clay deposits.
- CBR values of proposed access road.
- Unknown sulphate content of natural and made ground onsite.

Further work is recommended, which is detailed in the following Section.

7.2 Recommendations

7.2.1 General

In accordance with the NPPF, LKC consider that sufficient information on the potential contaminative status of the site is available in this Preliminary Risk Assessment report to allow the validation of any future planning application by the Local Planning Authority and for conditional planning approval to be granted. Such conditional approval will likely include standard prescriptive conditions requiring a site investigation, risk assessment and, if appropriate, a remedial strategy are completed to the satisfaction of the Local Planning Authority prior to the commencement of any development.

A Phase 2 intrusive survey should be carried out across the site to investigate the identified potential pollutant linkages further. LKC would recommend this can be undertaken pre-planning or once conditional planning approval is granted. The scope of this Phase 2 survey should be prior agreed with the Local Authority.

A copy of this report should be sent as part of the planning application.

7.2.2 Phase 2 Site Investigation

In order to address the potential pollutant linkages, a site investigation is recommended. The site investigation should be carried in accordance with relevant guidance documents (including BS10175[7] and BS5930[8]).

The investigation should include trial pits and / or boreholes at a sampling density of 1 sample per 25-50m square centres for an ‘exploratory investigation’ and 1 sample per 10-25m square centres for a ‘detailed investigation’. In addition, targeted sampling locations should be undertaken in areas of concern (e.g. areas of former terraces, area of potentially infilled ground, any areas of soft landscaping).

Soil samples should be collected from the trial pits / boreholes and tested for contaminants of concern based on the preliminary conceptual model and field observations (PID tests and visual / olfactory evidence).

In order to address potential Pollutant Linkage 3 (gas risk), gas monitoring is required.

Boreholes drilled on site should be installed with monitoring wells. Monitoring should be undertaken in accordance with CIRIA C665[9]. As a minimum, gas monitoring would

[7] British Standard (2017). “Investigation of Potentially Contaminated Sites – Code of Practice”. BS10175:2017.
[8] British Standard (2015). “Code of Practice for Ground Investigations”. BS5930:2015.
[9] CIRIA (2007). “Assessing Risks Posed by Hazardous Ground Gases to Buildings”. CIRIA C665.

likely be over a three month period with at least six gas monitoring visits under worst case temporal conditions.

If gas monitoring is not possible / practical, precautionary gas protection measures should be installed. Details of gas protection measures will be confirmed once ground conditions and foundation design are known.

In order to address Pollutant Linkage 4, groundwater samples should be collected from boreholes (monitoring wells). If no groundwater is present, soils can be subjected to leaching tests. Samples should be tested for contaminants of concern based on the preliminary risk assessment, field observations and results of the soil analysis.

It should be noted that boreholes and / or trial pits may also be utilised to provide appropriate geotechnical information on sub-surface conditions.

This investigation, in conjunction with appropriate geotechnical testing, will identify and characterise any contaminants encountered. Information from this investigation can then be used to provide a more detailed assessment of the identified pollutant linkages, provide appropriate foundation solutions and, if necessary, identify appropriate remedial measures to ensure that the site is made suitable for its proposed end use.

7.3 Further Considerations

7.3.1 Unexploded Ordnance

A moderate risk from unexploded ordnance (UXO) has been identified from regional UXO mapping.

It is recommended that a detailed UXO desk study is carried out to confirm the risk. The detailed desk study will confirm if any special precautions need to be considered before any intrusive work is carried out.

7.3.2 Flood Risk Assessment

A potential for groundwater flooding has been identified. A Flood Risk Assessment is being carried out and will be reported under separate cover by LKC.

Lancashire And Furness

Published 1848

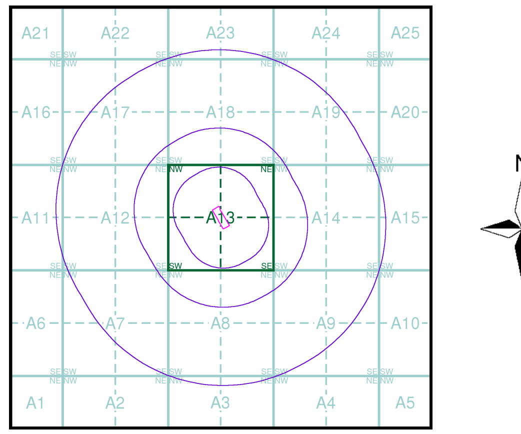

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Ordnance Survey Plan

Published 1956

Source map scale - 1:10,000

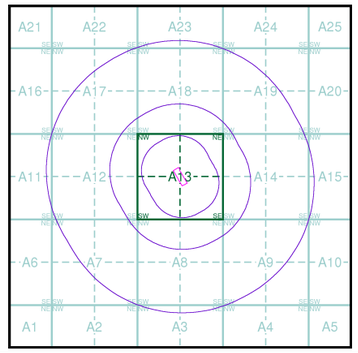

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

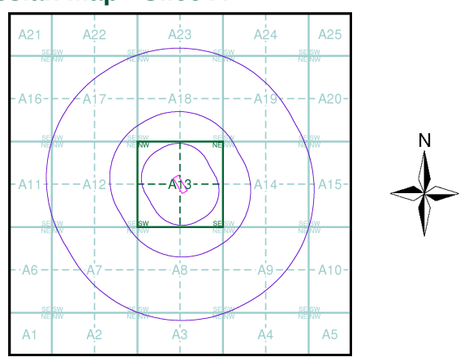

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

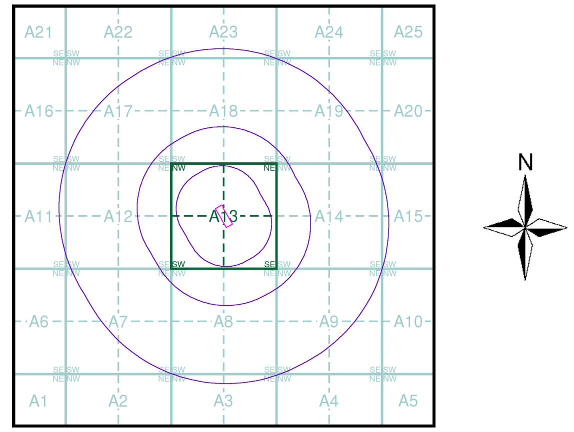

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2020

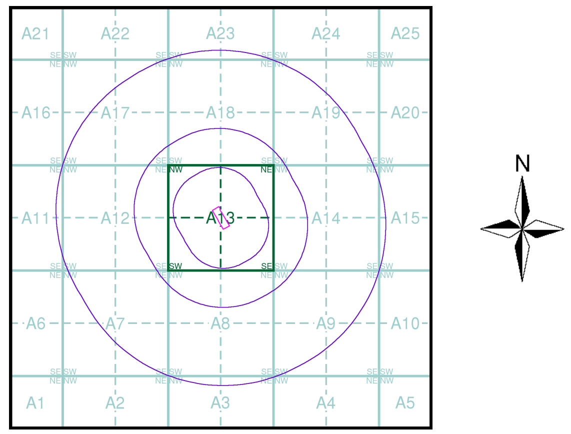

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

LK GROUP

Lancashire And Furness

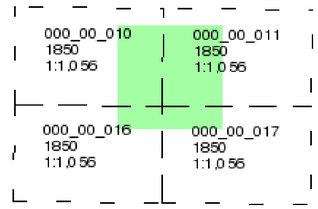

Published 1850

Source map scale - 1:1,056

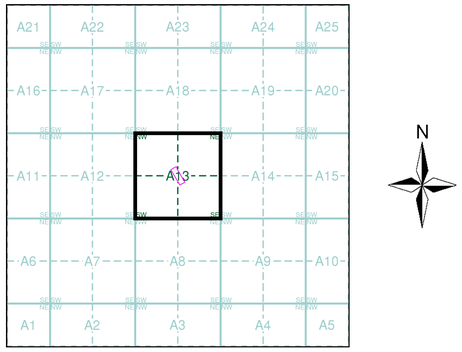

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LK GROUP

Lancashire And Furness

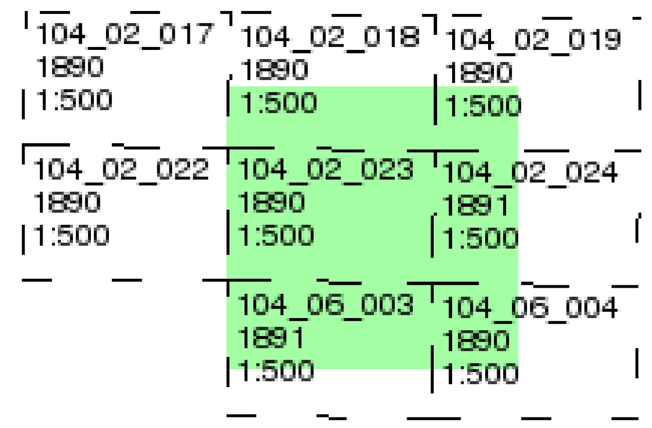

Published 1890 - 1891

Source map scale - 1:500

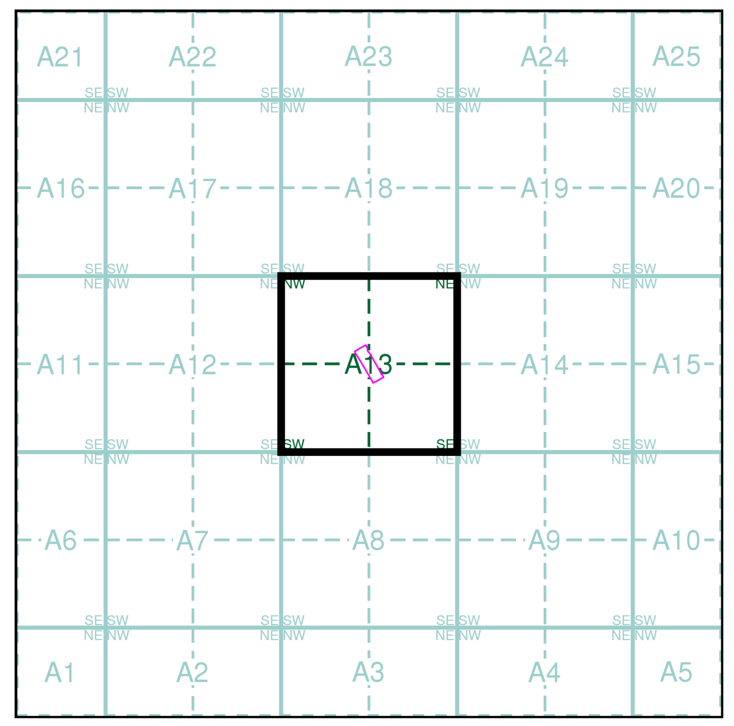

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Lancashire And Furness

Published 1933

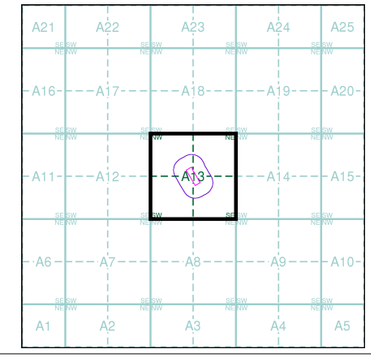

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1977

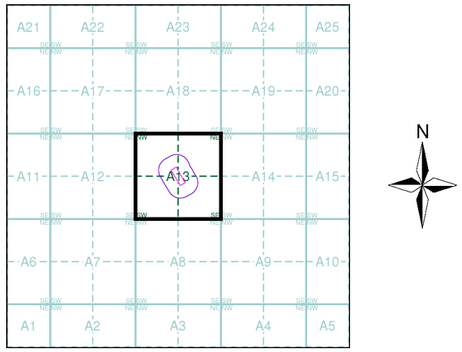

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

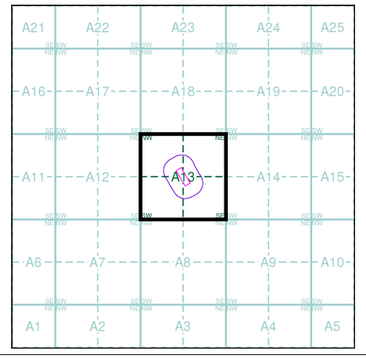

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

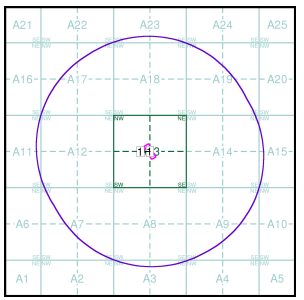

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

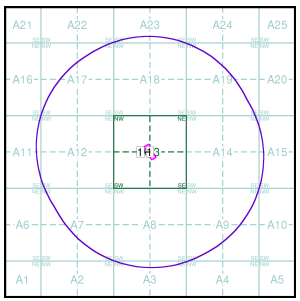

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

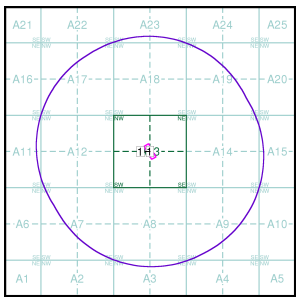

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Zetica UXO Unexploded Bomb Risk Map and Pre-Desk Study Assessment

UNEXPLODED BOMB RISK MAP

SITE LOCATION

Map Centre: 383343,400029

LEGEND

- **High:** Areas indicated as having a bombing density of 50 bombs per 1000acre or higher.
- **Moderate:** Areas indicated as having a bombing density of 15 to 49 bombs per 1000acre.
- **Low:** Areas indicated as having 15 bombs per 1000acre or less.

miltary	**industry**	**UXO find**
transport	**dock**	**Luftwaffe targets**
utilities	**Bombing decoy**	**other**

How to use your Unexploded Bomb (UXB) risk map?

The map indicates the potential for Unexploded Bombs (UXB) to be present as a result of World War Two (WWII) bombing.

You can incorporate the map into your preliminary risk assessment* for potential Unexploded Ordnance (UXO) for a site. Using this map, you can make an informed decision as to whether more in-depth detailed risk assessment* is necessary.

What do I do if my site is in a moderate or high risk area?

Generally, we recommend that a detailed UXO desk study and risk assessment is undertaken for sites in a moderate or high UXB risk area.

Similarly, if your site is near to a designated Luftwaffe target or bombing decoy then additional detailed research is recommended.

More often than not, this further detailed research will conclude that the potential for a significant UXO hazard to be present on your site is actually low.

Never plan site work or undertake a risk assessment using these maps alone. More detail is required, particularly where there may be a source of UXO from other military operations which are not reflected on these maps.

If my site is in a low risk area, do I need to do anything?

If both the map and other research confirms that there is a low potential for UXO to be present on your site then, subject to your own comfort and risk tolerance, works can proceed with no special precautions.

A low risk really means that there is no greater probability of encountering UXO than anywhere else in the UK.

If you are unsure whether other sources of UXO may be present, you can ask for one of our **pre-desk study assessments (PDSA)**

If I have any questions, who do I contact?

tel: **+44 (0) 1993 886682**

email: **uxo@zetica.com**

web: **www.zeticauxo.com**

The information in this UXB risk map is derived from a number of sources and should be used in conjunction with the accompanying notes on our website: **(https://zeticauxo.com/downloads-and-resources/risk-maps/)**

Zetica cannot guarantee the accuracy or completeness of the information or data used and cannot accept any liability for any use of the maps. These maps can be used as part of a technical report or similar publication, subject to acknowledgment. The copyright remains with Zetica Ltd.

It is important to note that this map is not a UXO risk assessment and should not be reported as such when reproduced.

*Preliminary and detailed UXO risk assessments are advocated as good practice by industry guidance such as CIRIA C681 'Unexploded Ordnance (UXO), a guide for the construction industry'.

Pre-Desk Study Assessment

Site:	Bury New Road/Fairy Lane, Manchester
Client:	The LK Group
Contact:	Hannah Moss
Date:	24th February 2020
Pre-WWI Military Activity on or Affecting the Site	None identified.
WWI Military Activity on or Affecting the Site	None identified.
WWI Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Salford Docks and Manchester Ship Canal. ■ Industries important to the war effort, including chemical and engineering works, and munitions factories. ■ Transport infrastructure and public utilities. ■ Anti-Aircraft (AA) guns.
WWI Bombing	None identified on the Site.
Interwar Military Activity on or Affecting the Site	None identified.
WWII Military Activity on or Affecting the Site	None identified.
WWII Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Salford Docks and Manchester Ship Canal. ■ Industries important to the war effort, including engineering and metal works, and aircraft and munitions factories. ■ Military barracks, camps, and training areas. ■ Transport infrastructure and public utilities. ■ AA defences.
WWII Bombing Decoys (within 5km of Site)	None.
WWII Bombing	During WWII the Site was located in the County Borough (CB) of Manchester, close to the boundary with Salford CB. Manchester CB officially recorded 737No. High Explosive (HE) bombs with a bombing density of 27.0 bombs per 405 hectares (ha). Salford CB officially recorded 451No. HE bombs with a bombing density of 86.7 bombs per 405 ha. Manchester and Salford were heavily bombed between the 22nd and 24th December 1940 (the 'Manchester Blitz'). Over 400No. HE bombs and more than 30,000 Incendiary Bombs (IBs) fell across the region. Readily available records have been found to indicate that several HE bombs fell in close proximity to the Site.
Post-WWII Military Activity on or Affecting the Site	None identified.
Recommendation	It is recommended that a detailed desk study is commissioned to assess, and potentially zone, the Unexploded Ordnance (UXO) hazard level on the Site.

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary.

It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further in-depth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.

Site Reconnaissance – Land at Bury New Road / Fairy Lane, Manchester, M8 9SG

Photograph 1 (P1)
Gated access to the site through a driveway off Bury New Road.

Photograph 2 (P2)
Hardstood track crossing the site in the eastern perimeter.

Photograph 3 (P3)
Rough ground with brambles present across the site.

Photograph 4 (P4)
Public sewer in the north of the site.

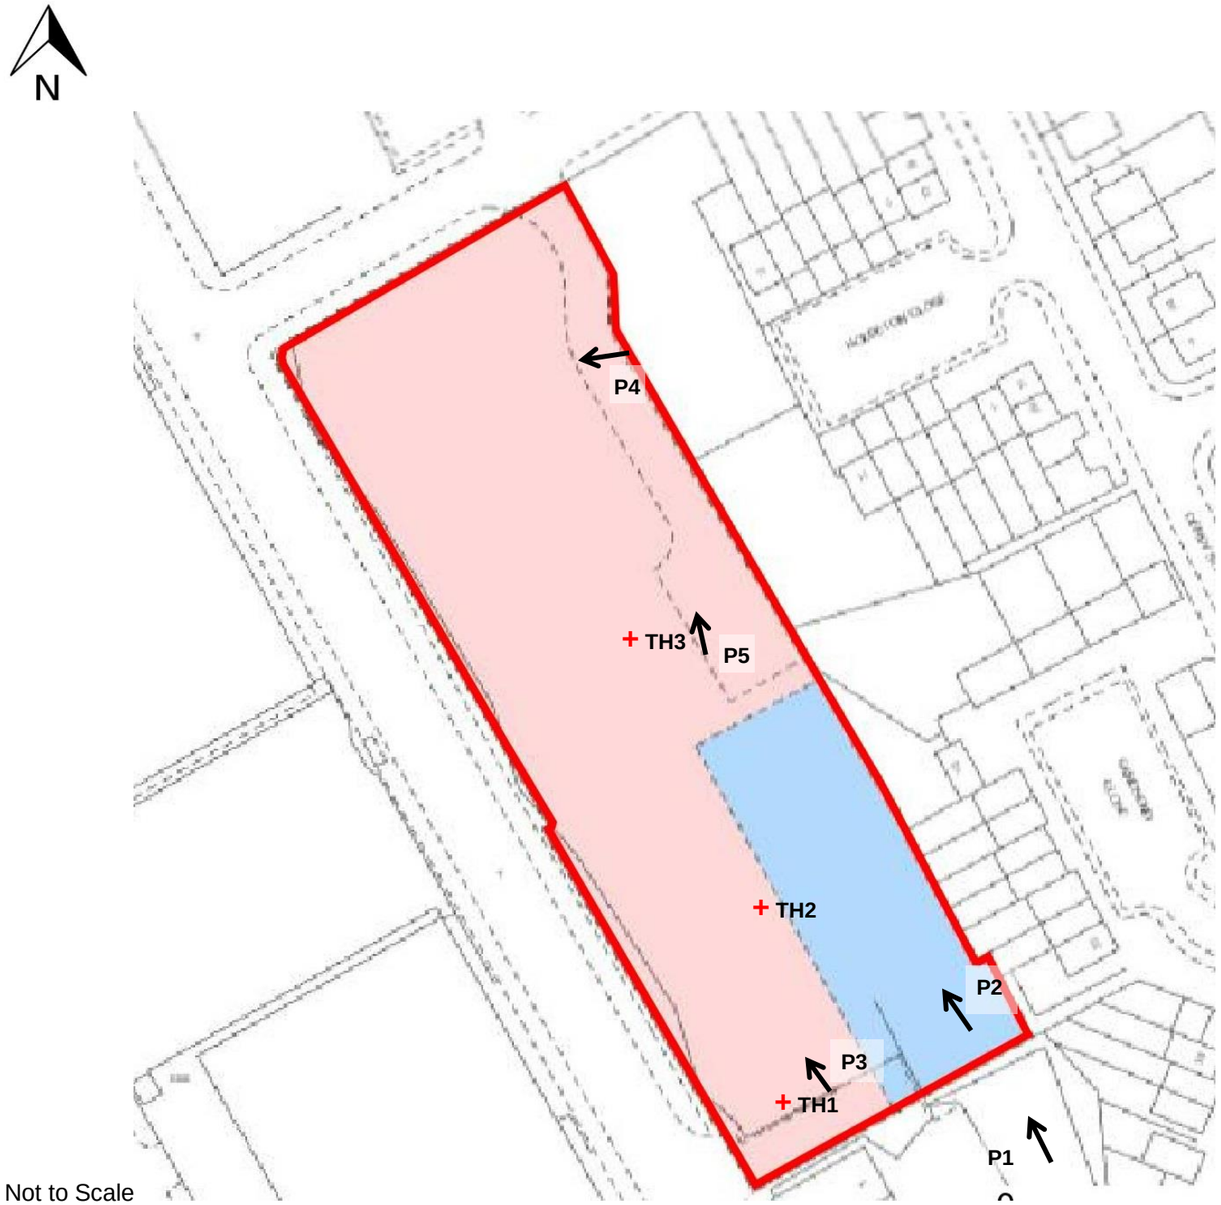

Photograph 5 (P5)
Areas of fly-tipping present in the east and north of the site.

Trial Hole 1 (TH1)
- Made ground (sandy clay with rootlets, brick, ash, clinker and glass fragments) to 0.4m
- Made ground (gravelly clay with rare ash and clinker) to >1m.

Trial Hole 2 (TH2)
- Made ground (sandy clay with rootlets, brick, ash, clinker and glass fragments) to 0.4m
- Made ground (concrete and bricks of buried structures) at 0.4mbgl.

Trial Hole 3 (TH3)
- Made ground (sandy clay with rootlets, brick, ash, clinker and rubber sheet) to 0.4m
- Made ground (concrete and bricks of buried structures) at 0.4mbgl.

Not to Scale

Appendix F

Risk Matrix

Risk Evaluation

The method for risk evaluation is a qualitative method of interpreting the output from the risk estimation stage of the assessment, based on CIRIA 552[10]. It involves the classification of the:

- Magnitude of the potential consequence (severity) of the risk occurring (Table A).
- Magnitude if the probability (likelihood) of the risk occurring (Table B).

Consequence (Severity)		
Classification	**Definition**	**Example**
Severe	- Short term (acute) risk to human health likely to results in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. - Short term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. - Catastrophic damage to buildings/properties. - A short term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definition of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	- High concentrations of cyanide on the surface of an informal recreation area. - Major spillage of contaminants from site into controlled waters. - Explosion, causing building collapse (can also equate to short term human health risk if buildings are occupied).
Medium	- Chronic damage to Human Health ('significant harm' as defined in DETR, 2000). - Pollution of sensitive water resources (note Water Resources Act contains no scope for considering significance of pollution). - A significant change in a particular ecosystem, or organism forming part of such ecosystem.	- Concentrations of a contaminant from site exceed generic, or site specific assessment criteria. - Leaching of contaminants from a site to a major or minor aquifer (Principal and Secondary). - Death of a species within a designated nature reserve.
Mild	- Pollution of non-sensitive water resources. - Significant damage to crops, buildings, structures and services ('significant harm' as defined in DETR, 2000). - Damage to sensitive buildings / structures / services or the environment.	- Pollution of non-classified groundwater. - Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	- Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. - Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.). - Easily repairable damage to buildings, structures and services.	- The presence of contaminants at such concentrations that protective equipment is required during site works. - The loss of plants in a landscaping scheme. - Discoloration of concrete.

Table A: Classification of consequence.

Probability (Likelihood)	
Classification	**Definition**
High likelihood	- There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	- There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. - Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low likelihood	- There is a pollutant linkage and circumstances are possible under which an event could occur. - However it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	- There is a pollutant linkage but circumstances are such that it is improbable that an event would occur in the very long term.

Table B: Classification of probability.

[10] CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

These classifications are then compared to indicate the risk presented by each pollutant linkage (Table C). It is important that this classification is only applied where there is a possibility (which can range from high likelihood to unlikely) of a pollutant linkage existing.

		Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability	**High likelihood**	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table C: Comparison of consequence against probability.

Once the risk has been determined the corresponding action can be assessed (Table D).

Risk	Action Required
Very High Risk	- There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that sever harm to a designated receptor is currently happening. - This risk, if realised, is likely to results in a substantial liability. - Urgent investigation (if not already undertaken) and remediation are likely to be required.
High Risk	- Harm is likely to arise to a designated receptor from an identified hazard. - Realisation of the risk is likely to present a substantial liability. - Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	- It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. - Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Low Risk	- It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	- There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Table D: Description of the classification and likely action required.

Where LKC identified a low to very low risk either limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk intrusive work or precautionary remedial measures will be recommended.
