1 Introduction

1.1 Background

LK Consult Ltd (LKC) has been commissioned by Golden Horse Ltd to carry out a Phase 1 Preliminary Risk Assessment (PRA) for land at Ashton Old Road, Manchester. The report was undertaken in support of a future planning application to redevelop the site for the construction of a food wholesalers with an associated car park.

According to guidance set out in CLR11[1] and the National Planning Policy Framework (NPPF)[2], a PRA with a site reconnaissance is required as a minimum to ascertain if there is a potential contamination risk.

In accordance with current guidance, the PRA will include a site reconnaissance, site history, geology, hydrogeology, hydrology, mineral search and a landfill search. Information gathered from the desk study and site reconnaissance will be used to develop a contamination conceptual model for the site, which will support the identification and assessment of any pollutant linkages.

In addition, the information gathered will be used to identify potential geotechnical constraints associated with the redevelopment of the site.

Based on the findings of this report, an appropriate site investigation can be derived once planning approval has been granted.

1.2 Site Details

A summary of the site details is presented in Table 1-1. Figures 1 and 2 indicate the site location and boundary. Figure 3 indicates the proposed development.

Location	Land between Staniforth Street, Gorton Road and Gable Street, to the south of Ashton Old Road, Manchester. Centred at approximate National Grid Reference 386570E 397520N.
Approximate Area	4800m^2.
Topography	Approximately 52 metres Above Ordnance Datum (AOD). Site is relatively level.
Current Land Use	Site Vacant land comprising the slab of the former warehouse and tarmac hardstanding of the former car parking areas. Surrounding Area North: Ashton Old Road with residences beyond. East: Commercial premises. South: Commercial premises. West: Commercial premises with vacant land beyond.
Proposed Development	Food wholesalers with associated car park.

Table 1-1: Summary of the site details.

2 Site History

In compiling the site history, LKC consulted historical mapping provided by the Landmark Information Group Ltd. Copies of relevant historical plans are provided in Appendix A and are summarised Table 2-1. Notable potentially contaminated features within 100m of the site boundary have been presented (distances will be approximate). The exception to this will be potentially significant features within a 250m buffer that could be infilled historically.

Site Features	Location	Map Dates Present	Comments
2no. ponds	NE & SW	1848 only	- Potentially infilled by 1891 mapping.
2no. roads	Centre S	1891-1975 1891-1975	- 'Clifford Street' runs E-W through centre of site. - 'Robinson Square' present to the S. - No longer present by 1979 mapping.
Residential houses	Whole Site	1891-1975	- Houses either side of Clifford Street and to the W of Robinson Square no longer present by 1963 mapping. - Houses to the E of Robinson Square no longer present by 1967 mapping. - Houses to the N of Clifford Street no longer present by 1979 mapping.
Large unreferenced building	Centre	1979-2017	- Large building split into 3 between 1979-1988 mapping. - Split into 4 between 1992-2017 mapping, labelled 1, 5, 7 & 9. - The original building is no longer present due to a fire on the 24th October 2017 and subsequent demolition[3].
Electrical substation	NE boundary	1979-present	- Building present from 1963 mapping. - Labelled from 1979 mapping onwards.
Surrounding Area Features	**Distance / Location**	**Map Dates Present**	**Comments**
2no. brick kilns	60m N 65m SW	1848 only	- No longer present by 1891 mapping.
3no. brick fields	145m NW 180m NE 194m NW	1848 only 1848 only 1891-1894	- Brick fields with associated cuttings. - Brick fields 145m NW & 180m NE no longer present by 1891 mapping. - Brick field 194m NW no longer present by 1908 mapping.
Tank	58m S	1891-1967	- No longer present by 1968 mapping.
Cattle pens	59m W	1891-1973	- No longer present by 1975 mapping.

Table 2-1: Summary of the historical features.

[3] Manchester Evening News: https://www.manchestereveningnews.co.uk/news/greater-manchester-news/it-raging-inferno-wing-fat-13807440

Site Features	Location	Map Dates Present	- Comments
Coal and mineral depot	52m SW	1891-1987	- Marked as 'Coal & Mineral Depot' between 1891-1894 mapping. - Marked as 'Ashton Road Goods, Mineral & Cattle Depot' from 1948 mapping. - Associated with railway lines and travelling cranes. - Including warehouses 80m SE, 85m W, 160m W & 220m W. - Extends to beyond 250m from the site boundary. - No longer present by 1992 mapping. - Railway lines 88m and 180m SW still present.
Cuttings	42m S 82m S 105m SW 115m S 155m S	1891-1908 1891-1983 1891-1983 1891-1983 1891-1983	- Cuttings 42m S potentially infilled by 1909 mapping. - Cuttings 82m-155m of the site potentially infilled by 1987 mapping.
Coach works	40m NW	1932-1973	- No longer present by 1981 mapping.
Gas works	175m SW	1908-1938	- No longer present by 1948 mapping.
Works	48m E	1908-present	- Named as 'Burlington Engraving Works' between 1908-1932 mapping. - Named 'Burlington Works (Engineering)' between 1948-1967 mapping. - Named 'Works' by 1975 mapping.
Tramway	7m N	1908-1932	- Replaced by road by 1938 mapping.
Wagon repairing shed	16m SW	1932-1987	- Building remains, however rail lines entering the area no longer present by 1992 mapping.
Scrap metal yard	48m E	1948-1984	- No longer present by 1992 mapping.
Works	20m N	1967-1968	- No longer present by 1979 mapping.
Garage	22m W	1967-present	
Electrical substation	70m W	1983-1995	- No longer present by 2000 mapping.

Table 2-1 (cont.): Summary of the historical features.

3 Environmental Setting

In compiling this Section, LKC consulted environmental information provided by the Envirocheck Report (Appendix B), British Geological Survey (BGS) (Appendix C), the Coal Authority, Zetica UXO (Appendix D), Natural England and the Environment Agency. A summary is presented in Table 3-1.

Categories(data sources)			Details
Geology	Artificial[1]		- Made ground recorded in the south of the site.
	Superficial[1]		- Till (Diamicton).
	Bedrock[1,2]		- Great Mine Limestone in the east of the site. - Halesowen Formation (mudstone, siltstone and sandstone) in the west.
	BGS Logs[3]		- BH Ref: SJ89NE191, 80m N: made ground and glacial deposits to 9.45mbgl, grey sandy clay with irregular harder mudstone fragments, some coal fragments and occasional brown laminae to 10.67mbl, mudstone to >40mbgl with coal at 10.97mbgl.
Hydro-geology	Aquifer Designation	- Superficial	- Secondary Aquifer - Undifferentiated.
		- Bedrock	- Secondary A Aquifer.
	Source Protection Zone (SPZ)[1]		- Site is not within an SPZ.
	Groundwater Abstractions[1]		- None within 1km.
Hydrology[1]	Nearest Surface Water		- Un-named surface water 544m SE.
	Water Quality Data		- No water quality data within 500m.
	Flooding		- No risk from rivers or sea. - Limited potential for groundwater flooding to occur in the E of site. - Potential for groundwater flooding to occur at surface and for groundwater flooding of property situated below ground level in the S.
	Surface Water Abstractions		- None within the Envirocheck search area of 1km.
	Discharge Consents		- 1 within 250m: 67m SE, operated by United Utilities Water Limited. Discharge of public sewage (storm sewage overflow) into a Black Brook. Effective from 21st January 2014.
	Pollution Incidents		- 2 within 250m: - 41m W, 16th March 1995, release of crude sewage into the River Goyt. Category 3 – Minor Incident. - 208m SE, 22nd July 1997, release of fire water/foam into Manchester Ship Canal. Category 3 - Minor Incident.

Table 3-1: Summary of the environmental setting.
Data Sources: **1** – Envirocheck Report (Appendix A & B);
2 – BGS Sheet 85 1:50,000;
3 – BGS GeoIndex http://mapapps2.bgs.ac.uk/geoindex/home.html (Appendix C).

Categories(data sources)		- Details
Minerals & Mining	Coal Report	- Site within Coal Mining Reporting Area.
	Coal Mining Development High Risk Area (DHRA)[4]	- Not within a DHRA.
	Surface Extractions[1]	- 12 mineral extraction sites within 500m. - Nearest 125m SW - 'Ardwick Brick Field'. Status listed as ceased.
	Cheshire Brine Compensation District[1,4,5]	- N/A.
	Mining Instability / Non-Coal Mining Area[1]	- Site is within an area of conclusive rock mining and inconclusive coal mining.
Ground Stability (onsite)[1]	Collapsible Ground	- Very low hazard.
	Compressible Ground	- Very low to no hazard.
	Ground Dissolution	- No hazard in the SW. - Very low hazard in the S.
	Landslide	- Very low hazard.
	Running Sand	- Very low hazard.
	Shrinking / Swelling Clay	- Very low hazard.
Landfill Sites[1]	Known / Registered	- None within 500m.
	Potential	- 5 within 250m. - 2no. ponds on site, potentially infilled by 1891 mapping. - 3no. brick fields 145-194m, potentially infilled by 1891-1901 mapping.
Radon[1]		- Intermediate probability radon area (1-3% of homes at or above Action Level). - No radon protection measures are necessary in the construction of new dwellings or extensions.
Designated Sites[1]		- None within 250m.
Contemporary Trade Directory[1]		- 8 within 100m: 'Gorton Autos' (car breakers and dismantlers) and 'Universal' (scrap metal merchants) previously onsite. Status listed as inactive.
Fuel Station Entries[1]		- None within 500m.
Unexploded Bomb Risk (UXO)[6]		- Moderate.

4 Site Reconnaissance

A site reconnaissance was carried out on 20th February 2019. Hand dug trial were not possible as hardstanding was present across the site.

An annotated plan with photographs is provided in Appendix E.

Relevant features identified on site are summarised below:

- Access to the site is via a locked gate off Stainforth Street. A security bund is also present.
- The site is surrounded on all sides by a metal palisade fence, with low brick wall present along the eastern and southern boundaries.
- An adjacent electricity substation forms part of the boundary in the north east corner of the site.
- The site is relatively level, with only a small downwards gradient towards the south.
- The site comprises the slab of the former warehouse and tarmac hardstanding of the former car parking areas.
- Two shipping containers are present in the southern corner of the site (contents unknown) and another three empty shipping containers are in the north western corner of the site. Two small, empty tool sheds are present in the northern corner of the site.
- Numerous examples of former foundations and building structural elements are present. Evidence identified included several apparent concrete pad foundations with in-situ steelwork, former floor slabs and remnant concrete pile caps.
- There is evidence of the presence of underground services on site including several manhole covers, trenches and exposed and cable.
- No evidence of significant ground contamination was identified.

The surrounding area comprises:

- North: Ashton Old Road with residences beyond.
- East: Commercial premises.
- South: Commercial premises.
- West: Commercial premises with vacant land beyond.

5 Preliminary Conceptual Model

5.1 Introduction

The aim of the conceptual model is to provide a preliminary assessment of the likelihood of a pollutant linkage for each potential combination of contaminant, pathway and receptor. A conceptual model can be used to make an informed decision on the contamination risks associated with the site and whether further site investigation work is required.

The Sections below are therefore divided into potential contaminant, potential pathway and potential receptor as described in CLR11[4], on the premise that, if there is no pollutant linkage, then there will be no risk to the receptor. The final Section provides an assessment of the potential pollutant linkages that may still be present on the site if redevelopment were to occur.

5.2 Potential Contaminants

Potential contamination sources are detailed in Table 5-1.

Source	Contaminants
Onsite former building	- Asbestos Containing Material (ACM).
Onsite made ground (general made ground, potentially infilled ground)	- Ash and clinker (e.g. from hearths and boilers, often historically used for site raising / levelling, noted in the site walkover): Heavy metals, sulphates and PAHs[5]. - Other unknown inorganic / organic contaminants (dependant on fill material source). - If significant depth of organic / putrescible material: Hazardous gas (principally carbon dioxide and methane).
Offsite potentially infilled ground (within 250m)	- Hazardous gas (principally carbon dioxide and methane). - Given age and size of potentially infilled features, not considered to be a significant source.
Adjacent current electricity sub station	- Polychlorinated biphenyl (PCBs) and transistor oils. - Due to relatively recent age and assumed ongoing maintenance, significant leakages / spillages not expected. PCBs not used after early 80's.
Offsite industry (current garage, former wagon repairing shed, works, scrap metal yard)	- Spillages/leakages: petroleum hydrocarbons, oils (source expected to be minimal and localised). - Metals, inorganic compounds and organic compounds. - Not expected to be a significant source due to distance from site

Table 5-1: Potential contamination sources.

[4] Defra (2004). "Model Procedures for the Management of Land Contamination". R&D Publication CLR 11.
[5] Defra (2002). "Potential Contaminants for the Assessment of Land". R&D Publication CLR 8.

5.3 Potential Receptors

Potential receptors are detailed in Table 5-2.

Receptors	
Human Health	- Future site users (including visitors and site workers). - Offsite land users.
Controlled Waters	- Secondary A Aquifer (bedrock) and Secondary Aquifer – Undifferentiated (superficial). - Un-named surface water 544m SE not considered a significant receptor due to distance from site.
Buildings and structures.	
Potable water pipes.	
Flora within future gardens and landscaping.	

Table 5-2: Potential receptors.

5.4 Potential Pathways

Potential pathways are detailed in Table 5-3.

Pathways		
Soil	Human Health[6] (commercial land use with soft landscaping)	- Ingestion of soil. - Ingestion of soil-derived indoor dust. - Dermal contact with soil. - Dermal contact with soil-derived indoor dust. - Inhalation of soil-derived outdoor dust. - Inhalation of soil-derived indoor dust. - Inhalation of vapours outside. - Inhalation of vapours inside. - Omitted: ingestion of contaminated vegetables and ingestion of soil attached to vegetables.
	- Windblown dust and fibres to adjacent receptors.	
	- Direct contact with receptors (building foundations, services).	
Water	- Surface run-off over impermeable surface. - Site is predominantly hardstood; therefore, infiltration is likely to be limited.	
	- Infiltration into the ground, through potentially contaminated material (contamination possibly going into solution). - Site is predominantly hardstood; therefore, infiltration is likely to be limited.	
	- Migration through potentially permeable strata and preferential pathways. - Bedrock (limestone, sandstone, siltstone and mudstone) likely to be variably permeable. - Preferential pathways: services.	
Gas	- Migration through potentially permeable strata and preferential pathways. - Bedrock (limestone, sandstone, siltstone and mudstone) likely to be variably permeable. - Preferential pathways: services.	
	- Migration into buildings (e.g. via services) and accumulation of gases in confined spaces (potentially causing explosion if methane is present).	

Table 5-3: Potential pathways.

[6] EA (2008). "Updated Technical Background to the CLEA Model". Science Report – SC050021/SR3.

5.5 Preliminary Contamination Conceptual Model

The Preliminary Contamination Conceptual Model is illustrated in Table 5-4 and has identified seven generic potential pollutant linkages.

Each linkage is described along with an assessment of the risk based upon guidance on probabilities and consequences outlined in CIRIA C552[7].

In order to assess the potential risk for each pollutant linkage, an assessment of the magnitude of the potential consequence (severity) of the risk occurring and the magnitude of the probability (likelihood) of the risk occurring has been considered and classified. This is based on the guidance provided in CIRIA C552 and further details including a risk matrix is provided in Appendix F.

Where LKC identified a low to very low risk, limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk, intrusive work or precautionary remedial measures will be recommended.

It should be noted that there may be risk from short term exposure from contaminated soil to site workers. The Preliminary Contamination Conceptual Model deals with long term exposure to key receptors. Acute risks can be easily mitigated by good environmental management of the site during site works. Standard health and safety precautions (as per HSE guidance[8]) should be adopted by all workers involved with site enabling and construction works. Therefore, this receptor is not considered in the contamination conceptual model.

[7] CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.
[8] HSE (1991). "Protection of Workers and the General Public During Development of Contaminated Land". London HMSO.

Pollutant Linkage	Pathway	Receptor	Contaminant (source)	Probability	Consequence	Risk	Assessment & Recommendations
PL1	- Dermal contact. - Inhalation of soil, fibres and dust. - Windblown dust.	- Future site users. - Offsite receptors.	- ACM (former buildings, potentially in made ground). - Heavy metals, PAHs (made ground).	Low likelihood	Medium	**Moderate/** Low	- Low likelihood due to limited areas of soft landscaping. - Moderate risk assumed at this stage. - **Recommendation**: Intrusive investigation required to include soil sampling.
			- Heavy end hydrocarbons, other organic and inorganic contaminants (oils from offsite garage and former offsite industry).	Unlikely	Medium	**Low**	- Unlikely as minimal spills / leakages expected from offsite former industry and the limited areas of soft landscaping. - Moderate risk assumed at this stage. - **Recommendation**: Sampling required if evidence of contamination identified.
PL2	- Inhalation of vapours. - Migration through permeable strata and preferential pathways.	- Future site users. - Offsite receptors.	- Volatile contaminants such as hydrocarbons (former offsite garage, industry)	Unlikely	Medium	**Low**	- Unlikely as minimal spills / leakages expected from offsite former industry. **Recommendation**: Sampling required if evidence of contamination identified.
PL3	- Inhalation of gas. - Migration through permeable strata and preferential pathways. - Explosion in confined spaces.	- Future site users. - Buildings. - Offsite land users.	- Hazardous Gas: - Methane, carbon dioxide (potentially infilled features 250m of the site).	Unlikely	Severe	Moderate/ **Low**	- Unlikely given the age of potentially infilled features. - Till expected below the site may limit migration from offsite sources. - **Recommendation**: No remediation required Anticipated building foundations considered likely to provide suitable gas protection measures.
PL4	- Surface run-off. - Migration through permeable strata and preferential pathways. - Perched waters migration.	- Groundwater (Secondary A Bedrock Aquifer and Superficial Secondary Aquifer – Undifferentiated).	- Mobile contaminants such as metals, PAHs, hydrocarbons (made ground, offsite garage, other offsite former industry).	Unlikely	Medium	**Low**	- Unlikely given site history. - Till expected below the site will also prevent migration and site mainly hardstood. - Moderate risk assumed at this stage. - **Recommendation**: Precautionary groundwater sampling recommended.
PL5	- Sulphate attack on concrete.	- Building structure.	- Sulphate (possible ash in made ground).	Likely	Mild	**Moderate /** Low	- Likely given the site history. - Moderate risk assumed at this stage. - **Recommendation**: Intrusive investigation required as part of PL1.
PL6	- Ingestion of tainted water supply.	- Future site users. - Water pipes.	- Organic contaminants such as hydrocarbons (made ground, offsite garage, other offsite former industry).	Low likelihood	Medium	**Moderate/** Low	- Low likelihood as significant contamination not anticipated at pipeline depth (0.75-1.35m). - Risk is considered moderate at this stage due to unknown depth of made ground. - **Recommendation**: Sampling required if made ground present at pipeline installation depths.
PL7	- Direct contact (plant uptake).	- Flora.	- Phytotoxic contaminants (made ground).	Low likelihood	Minor	**Very Low**	- Low probability as contamination considered possible, which may be taken up by flora in areas of soft landscaping. - **Recommendation**: Investigation work as part of PL1.

Table 5-4: Preliminary Contamination Conceptual Model.

6 Preliminary Geotechnical Risk Assessment

Geology is mapped as Great Mine Limestone in the east of the site, Halesowen Formation (mudstone, siltstone and sandstone) in the west, overlain by superficial Till (Diamicton) deposits. Given the history of the site, significant made ground is anticipated.

The following need to be considered and investigated before any construction work commences:

- Deep made ground and / or relic in-ground structures (from former buildings, road) may be present on site which could affect groundworks (e.g. grubbing out of structures) and type of foundations required (e.g. deepening of foundations / pilling).
- The strength and variability of superficial deposits need to be confirmed. Till is anticipated which is likely to be at least medium strength however softer ground / organic ground / granular pockets may reduce this strength.
- The depth of groundwater and variability of the water table should be confirmed as shallow / fluctuating groundwater can affect the strength of the soil, particularly in granular ground.
- The CBR value of the ground for footpath and road design should be calculated.
- Sulphate content of the made ground and natural ground should be confirmed to assess the concrete requirements.

7 Summary Conclusions and Recommendations

7.1 Summary Conclusions

The proposed development is for the construction of a food wholesalers with an associated car park.

The site was historically undeveloped until the 1890s, when it was developed for residential use. The site was cleared of the residential properties and streets by 1979 mapping and replaced by a large commercial building (food wholesalers), which is no longer present due to a fire that occurred in October 2017.

The surrounding area historically comprised brick fields to the north and railway land with coal and mineral depots to the south. The area to the north has since been developed for residential use. The site is currently vacant land comprising the slab of the former warehouse and tarmac hardstanding of the former car parking areas.

Potential contamination sources affecting the site were identified as heavy metals, PAHs, sulphate, asbestos, hydrocarbons and gas (carbon dioxide and methane).

These contaminants may pose a risk to site users (via ingestion, dermal contact, inhalation pathways and explosion), controlled waters (via migration through permeable strata and preferential pathways), buildings and structures (direct contact and explosion), water pipes (direct contact) and flora (root uptake).
A contamination conceptual model has been produced by LKC. This has identified the following risks summarised in Table 7-1.

Pollutant Linkage		Risk	Recommendations
1	Contaminants posing a risk to future site users via dermal contact, ingestion and inhalation (of soil, dust and fibres).	**Moderate/** Low (ACM, heavy metals, PAHs)	Investigation work required to include soil sampling.
		Low (Heavy end hydrocarbons, other organic and inorganic contaminants)	Sampling required if evidence of contamination identified.
2	Volatile contaminants posing a risk to future site users via the inhalation of vapours.	**Low**	Sampling required if evidence of contamination identified.
3	Gas posing a risk to buildings and future site users via the migration of gas into building causing explosion and asphyxiation.	**Moderate/** Low	No remediation required Anticipated building foundations considered likely to provide suitable gas protection measures.
4	Mobile contamination posing a risk to controlled waters via the migration through permeable strata.	**Low**	Intrusive investigation required to include groundwater sampling.
5	Sulphate posing a risk to building via direct contact (sulphate attack).	**Moderate/** Low	Intrusive investigation required as part of PL1.
6	Organic contaminants posing a risk to water pipes.	**Moderate/** Low	Sampling required if made ground present at pipeline installation depths.
7	Phytotoxic metals posing a risk to flora via root uptake.	**Very Low**	Limited investigation work recommended as part of PL1.

Table 7-1: Summary risk table.

The preliminary geotechnical assessment has also identified the following potential risk which will need to be investigated:

- Possible deep made ground with in-ground structures.
- Unknown strength of superficial deposits for foundation design.
- Depth and variability of the water table.
- Plasticity of any clay deposits.
- CBR values of proposed access road.
- Unknown sulphate content of natural and made ground onsite.

Further work is recommended, which is detailed in the following Section.

7.2 Recommendations

7.2.1 General

In accordance with the NPPF, LKC consider that sufficient information on the potential contaminative status of the site is available in this Preliminary Risk Assessment report to allow the validation of any future planning application by the Local Planning Authority and for conditional planning approval to be granted. Such conditional approval will likely include standard prescriptive conditions requiring a site investigation, risk assessment and, if appropriate, a remedial strategy are completed to the satisfaction of the Local Planning Authority prior to the commencement of any development.

A Phase 2 intrusive survey should be carried out across the site to investigate the identified potential pollutant linkages further. LKC would recommend this can be undertaken pre-planning or once conditional planning approval is granted. The scope of this Phase 2 survey should be prior agreed with the Local Authority.

A copy of this report should be sent as part of the planning application.

7.2.2 Phase 2 Site Investigation

In order to address the potential pollutant linkages, a site investigation is recommended. The site investigation should be carried in accordance with relevant guidance documents (including BS10175[9] and BS5930[10]).

The investigation should include trial pits and boreholes at a sampling density of 1 sample per 25-50m square centres for an 'exploratory investigation' and 1 sample per 10-25m square centres for a 'detailed investigation'. In addition, targeted sampling locations should be undertaken in areas of concern (e.g. potentially infilled ponds in the northeast and southwest of the site).

Soil samples should be collected from the trial pits and boreholes and tested for contaminants of concern based on the preliminary conceptual model and field observations (PID tests and visual / olfactory evidence).

In order to address Pollutant Linkage 4, groundwater samples should be collected from boreholes (monitoring wells). Samples should be tested for contaminants of concern based on the preliminary risk assessment, field observations and results of the soil analysis.

[9] British Standard (2017). "Investigation of Potentially Contaminated Sites – Code of Practice". BS10175:2017.
[10] British Standard (2015). "Code of Practice for Ground Investigations". BS5930:2015.

Boreholes and trial pits may also be utilised to provide appropriate geotechnical information on sub-surface conditions.

This investigation, in conjunction with appropriate geotechnical testing, will identify and characterise any contaminants encountered. Information from this investigation can then be used to provide a more detailed assessment of the identified pollutant linkages, provide appropriate foundation solutions and, if necessary, identify appropriate remedial measures to ensure that the site is made suitable for its proposed end use.

7.3 Further Considerations

7.3.1 Unexploded Ordinance

A moderate risk from unexploded ordnance (UXO) has been identified from regional UXO mapping. It is recommended that a detailed UXO desk study is carried out to confirm the risk. The detailed desk study will confirm if any special precautions need to be considered before any intrusive work is carried out.

Lancashire And Furness

Published 1891

Source map scale - 1:500

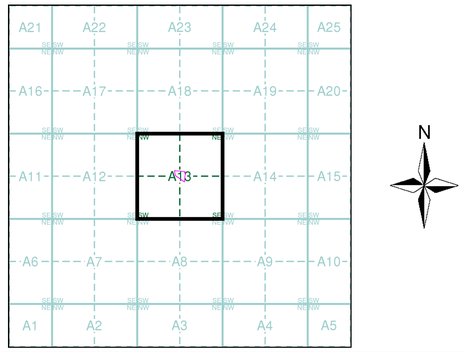

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1848

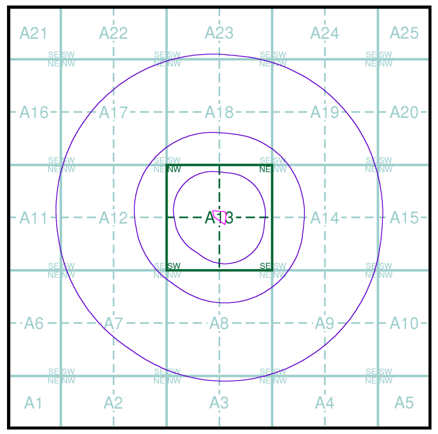

Source map scale - 1:10,560

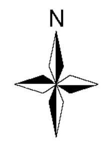

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LK GROUP

Ordnance Survey Plan

Published 1968

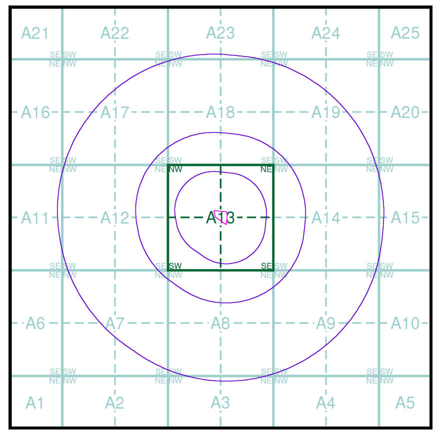

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LKC GROUP

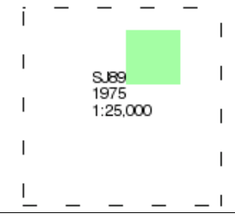

Manchester

Published 1975

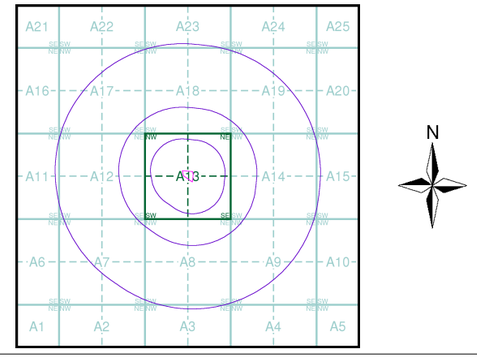

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

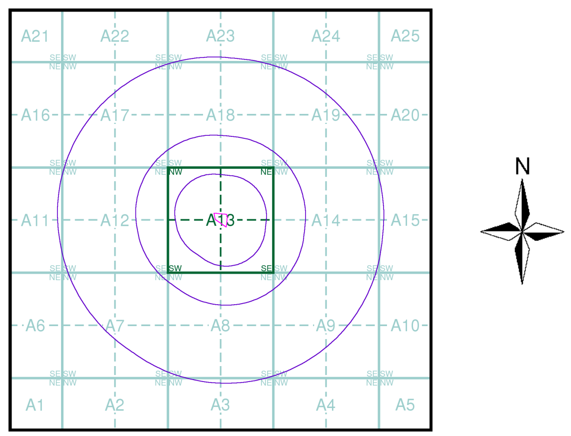

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2019

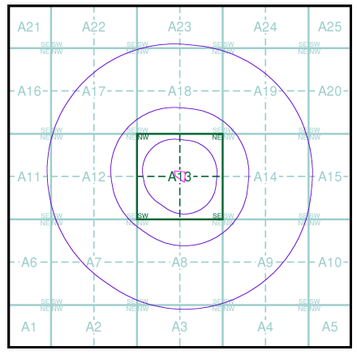

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1891

Source map scale - 1:500

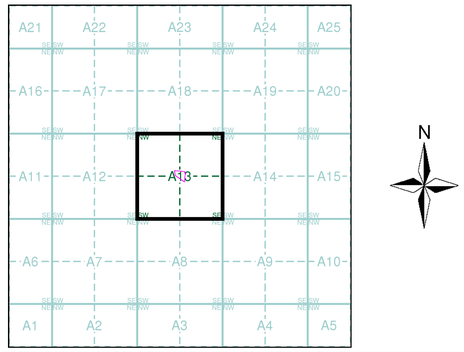

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Geology 1:50,000 Maps Coverage

Map ID: 1
Map Sheet No: 085
Map Name: Manchester
Map Date: 2010
Bedrock Geology: Available
Superficial Geology: Not Available
Artificial Geology: Not Available
Faults: Not Supplied

Artificial Ground and Landslip

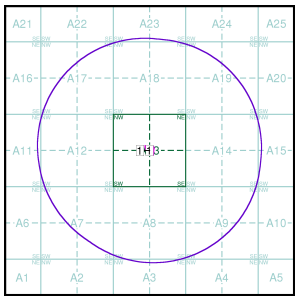

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

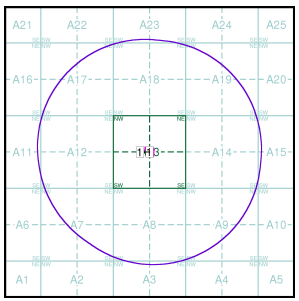

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

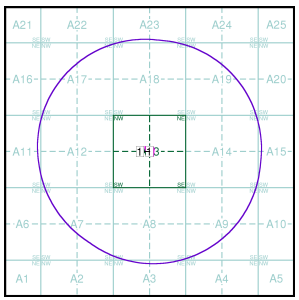

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Zetica UXO Pre-Desk Study Assessment

Pre-Desk Study Assessment

Site:	Land at Ashton Old Road, Manchester
Client:	The LK Group
Contact:	Ella McLeod
Date:	15th February 2019
Pre-WWI Military Activity on or Affecting the Site	None identified.
WWI Military Activity on or Affecting the Site	None identified.
WWI Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Salford Docks and the Manchester Ship Canal. ■ Transport infrastructure and public utilities. ■ Industry important to the war effort, including engineering, munitions and metal works. ■ Military barracks and training areas. ■ Royal Flying Corps (RFC) Alexandra Park. ■ Anti-Aircraft (AA) guns.
WWI Bombing	None identified on the Site.
Interwar Military Activity on or Affecting the Site	None identified.
WWII Military Activity on or Affecting the Site	None identified.
WWII Strategic Targets (within 5km of Site)	The following strategic targets were located in the vicinity of the Site: ■ Salford Docks and the Manchester Ship Canal. ■ Transport infrastructure and public utilities. ■ Industry important to the war effort, including engineering, munitions and metal works. ■ Military barracks, camps and training areas. ■ AA defences.
WWII Bombing Decoys (within 5km of Site)	None.
WWII Bombing	During WWII the Site was located in the County Borough (CB) of Manchester, which officially recorded 737No. High Explosive (HE) bombs with a bombing density of 27 bombs per 405 hectares (ha). The Manchester area was heavily bombed between the 22nd and 24th December 1940 (the 'Manchester Blitz'). Over 400No. HE bombs and more than 30,000 Incendiary Bombs (IBs) fell across the region. Most of the bombing was concentrated on the city centre, approximately 2.5km from the Site. No readily available records have been found to indicate that HE bombs fell on the Site.
Post-WWII Military Activity on or Affecting the Site	None identified.
Recommendation	A detailed desk study, whilst always prudent, is not considered essential in this instance.

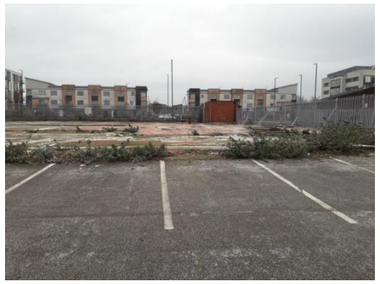

This summary is based on a cursory review of readily available records. Caution is advised if you plan to action work based on this summary.

It should be noted that where a potentially significant source of UXO hazard has been identified on the Site, the requirement for a detailed desk study and risk assessment has been confirmed and no further research will be undertaken at this stage. It is possible that further in-depth research as part of a detailed UXO desk study and risk assessment may identify other potential sources of UXO hazard on the Site.

Appendix F

Risk Matrix

Risk Evaluation

The method for risk evaluation is a qualitative method of interpreting the output from the risk estimation stage of the assessment, based on CIRIA 552[11]. It involves the classification of the:

- Magnitude of the potential consequence (severity) of the risk occurring (Table A).
- Magnitude if the probability (likelihood) of the risk occurring (Table B).

Consequence (Severity)		
Classification	**Definition**	**Example**
Severe	- Short term (acute) risk to human health likely to results in 'significant harm' as defined by the Environment Protection Act 1990, Part IIA. - Short term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. - Catastrophic damage to buildings/properties. - A short term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definition of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	- High concentrations of cyanide on the surface of an informal recreation area. - Major spillage of contaminants from site into controlled waters. - Explosion, causing building collapse (can also equate to short term human health risk if buildings are occupied).
Medium	- Chronic damage to Human Health ('significant harm' as defined in DETR, 2000). - Pollution of sensitive water resources (note Water Resources Act contains no scope for considering significance of pollution). - A significant change in a particular ecosystem, or organism forming part of such ecosystem.	- Concentrations of a contaminant from site exceed generic, or site specific assessment criteria. - Leaching of contaminants from a site to a major or minor aquifer (Principal and Secondary). - Death of a species within a designated nature reserve.
Mild	- Pollution of non-sensitive water resources. - Significant damage to crops, buildings, structures and services ('significant harm' as defined in DETR, 2000). - Damage to sensitive buildings / structures / services or the environment.	- Pollution of non-classified groundwater. - Damage to building rendering it unsafe to occupy (e.g. foundation damage resulting in instability).
Minor	- Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. - Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc.). - Easily repairable damage to buildings, structures and services.	- The presence of contaminants at such concentrations that protective equipment is required during site works. - The loss of plants in a landscaping scheme. - Discoloration of concrete.

Table A: Classification of consequence.

Probability (Likelihood)	
Classification	**Definition**
High likelihood	- There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution.
Likely	- There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. - Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low likelihood	- There is a pollutant linkage and circumstances are possible under which an event could occur. - However it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term.
Unlikely	- There is a pollutant linkage but circumstances are such that it is improbable that an event would occur in the very long term.

Table B: Classification of probability.

[11] CIRIA (2001). "Contaminated Land Risk Assessment: A Guide to Good Practice". C552.

These classifications are then compared to indicate the risk presented by each pollutant linkage (Table C). It is important that this classification is only applied where there is a possibility (which can range from high likelihood to unlikely) of a pollutant linkage existing.

		Consequence			
		Severe	**Medium**	**Mild**	**Minor**
Probability	**High likelihood**	Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk
	Likely	High Risk	Moderate Risk	Moderate / Low Risk	Low Risk
	Low likelihood	Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk
	Unlikely	Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk

Table C: Comparison of consequence against probability.

Once the risk has been determined the corresponding action can be assessed (Table D).

Risk	Action Required
Very High Risk	- There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that sever harm to a designated receptor is currently happening. - This risk, if realised, is likely to results in a substantial liability. - Urgent investigation (if not already undertaken) and remediation are likely to be required.
High Risk	- Harm is likely to arise to a designated receptor from an identified hazard. - Realisation of the risk is likely to present a substantial liability. - Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term.
Moderate Risk	- It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. - Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
Low Risk	- It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very Low Risk	- There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

Table D: Description of the classification and likely action required.

Where LKC identified a low to very low risk either limited intrusive investigation work, a watching brief (during construction work) or no investigation work will be recommended. This will be dependent on the nature of the site and the proposed development.

Where the risk falls into the moderate/low risk, LKC will undertake an assessment to establish what category the pollutant linkage will fall into (i.e. moderate or low risk will be chosen).

Where LKC identifies a moderate or higher risk intrusive work or precautionary remedial measures will be recommended.
