3. Brief

Survey & Engineering Projects were asked to carry out a Dilapidation Survey of the Manchester Aquatics Centre, Manchester M13 9SS and the surrounding roads. The survey was to include photos and videos within the site showing existing damage in these areas as well as time related degradation, for example rust or rot. This information would then be compiled into a report to provide the client with a reference as to the condition of the area at this time.

It is beyond the scope of the survey to provide structural information of the site and the structures within it such as corrosion testing, creep, fatigue, stress or wear. This survey is only observational. Although every effort has been made to cover the area in detail, issues such as access will inevitably lead to some areas not covered. The survey was to only include areas that can be visible from the ground.
