Waste & Deliveries Information

In respect of the proposed development at

Unit 1a, Tib St NQ MCR, Church Street, Manchester

On behalf of

Celebrity Ink

Prepared by: Lambert Smith Hampton
6th Floor Hardman Street
Spinningfields
Manchester M3 3HF

Tel: +(0)161 242 8055
Fax: +(0)161 242 7354
Date: 15/06/2021

1 Deliveries

- 1.1 Deliveries to the Celebrity Ink unit of building are to be received from Church Street entrance and will be managed by the in-store Celebrity Ink team. They expect a scheduling system for deliveries will be operated that will be fairly frequent and managed to reflect products required for the daily and weekly operations. Delivery will be handled by the main reception that will be located at the main entrance to the facility.
- 1.2 The below diagram displays the application site in relation to the refuse and delivery areas:

Source: JLL / LTL (2021)

2 Waste Collection

- 2.1 As shown above, the loading and waste bay is located on Joiner Street and functions as the waste storage area; this will contain Celebrity Ink's waste bins for two types of waste, general waste and any mixed recyclates as set out in the submitted waste proforma. The operator will generally store any waste bins in these areas during most of the trading week and then will leave the bins outside on the street on associated collection days in the week. LSH understand that refuse vehicles do move along Joiner Street to service other surrounding properties.

- 2.2 We can confirm that the applicant is committed to the use and application of sustainable products when available and this focuses on biodegradable single use plastic or other single use products to ensure that the impact on the sources of waste is tackled at the first stage of the waste process.
- 2.3 Given the nature of the operations there will be medical waste that will be disposed of through a private waste contractor and this will be procured in advance of opening. This will likely be managed on a daily basis and the applicant can provide more information in advance of opening as no procurement has yet been agreed. Given that medical waste is linked to needles and other disused medical material, this will be managed through a controlled medical waste strategy through secured storage that is concealed and unable to be opened freely.
