

Design Principles of Perimeter Services and Boxing

Following MUR works, further progression with Purcell / Ramboll which have now allowed the modules to sit on the timber floors, with less opening up of fabric

NGB was brought onto the OTH – modules were developed this allows better logistics cost and less waste.

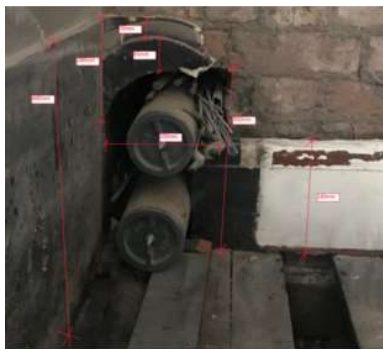

Purcell developed casing which would cover the services

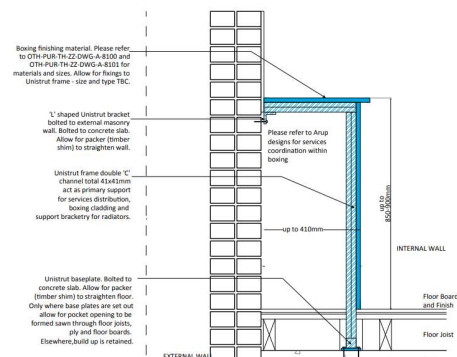

Design Start

Using the same service distribution routes as Waterhouse was agreed as a project.

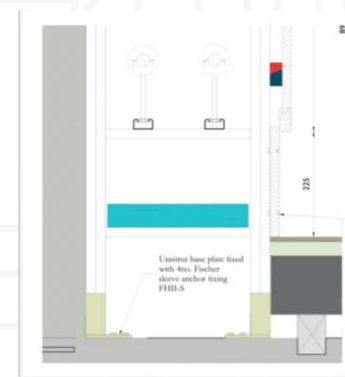

Unistrut frames were developed to fix the services to frames. The benefit were no fixing to the walls

LBC Issued

Modules were developed to sit on the existing concrete floor for stability

Justification Report (First Revision) issued

Present
