Contract: 42028v2

Date: October 2017

EXECUTIVE SUMMARY

On the instructions of Eckersley O'Callaghan, Consulting Engineers to Logik Developments (Arundel Street) Ltd, a Preliminary Risk Assessment in the form of a desk study and site reconnaissance has been carried out to assess the potential contamination hazards on and adjacent to the site and prepare a risk assessment for further consideration.

A new residential led development scheme is proposed for the site. The scheme will comprise a U-shaped building that will step 8 to 9 storeys from Arundel Street to Worsley Street, and 11 to 23 storeys along Mancunian Way. Development will also include the refurbishment and conversion of the existing 4 storey DOT building on the south side of the site.

The site is situated at Arundel Street, approximately 1.5km to the southwest of Manchester City Centre.

The history of the site and surrounding area reflects the rapid industrialisation of the area through the second half of the 19th century, the continuation of the area as an industrial heartland through the first half of the 20th century and the industrial decline through the 1960's. Terraced housing partly covered the site by 1848, predominantly covering the site by 1891. A sand pit may have occupied part of the site about 1848.

An engineering works occupied the southern part of the site by 1891, later occupied by DOT Motorcycles. This building currently remains on site. Terraced housing remained through the 1950's. By 1969 the site had been cleared of housing and was occupied by commercial units.

The site was surrounded by a variety of industrial buildings including engineering works, dye works, cotton works and corn mills reflecting the intense industrialisation of the area from the mid 1800's to the mid 1900's. These industrial sites were developed in tandem with extensive areas of terraced housing. The Mancunian Way was built adjacent to the site in the early 1960's and has remained until the present day.

The geological map indicates superficial deposits to be absent beneath most the site. The southern part of the site is underlain by Glaciofluvial Sheet Deposits comprised of Sand and Gravel. Bedrock comprises sandstone; part of the Chester Pebble Beds Formation of Triassic age.

The research has indicated the following potential sources of contamination which may form part of a pollutant linkage:

- Contamination associated with potential made ground due to previous development on-site
- Contamination associated with range of historical industrial processes around the site

The research has identified evidence of potential sources of contamination on or which may impact on the site. After construction, the site will be covered with buildings and hardstanding therefore the risk to end users are considered very low.

There may be a low risk to workers during the construction phase.

The development may alter the existing drainage routes or infiltration pathways and may therefore pose a low risk to the water environment.

It is recommended that further work be carried out to confirm the presence, nature or extent of any contamination which is anticipated to impact on the site.

The following scope of works is recommended to collect the required data:

- The sinking of boreholes to determine the ground conditions and for the recovery of samples for geotechnical analysis to aid foundation design.
- Soil sampling and analysis to inform contamination risks associated with the construction period.

An asbestos report may be required before undertaking demolition.

1.0 INTRODUCTION

1.1 General

- 1.1.1 On the instructions of Eckersley O'Callaghan, Consulting Engineers to Logik Developments (Arundel Street) Ltd, a Preliminary Risk Assessment in the form of a desk study and site reconnaissance has been carried out to assess the potential hazards on and adjacent to the site and prepare a risk assessment for further consideration.
- 1.1.2 It is understood that it is proposed to develop the site for a residential scheme. The scheme proposals are as follows:
- Clearance of existing industrial units.
 - Refurbishment and conversion of the four storey DOT motorcycle building for mixed commercial / residential use
 - New build to provide ground floor commercial units, residential units and a resident roof garden. This will comprise a U-shaped building that will step 8 to 9 storeys from Arundel Street to Worsley Street, and 11 to 23 storeys along Mancunian Way
- 1.1.3 This report has been prepared for the sole use of the Client for the purpose described and no extended duty of care to any third party is implied or offered. Third parties using any information contained within this report do so at their own risk.
- 1.1.4 It is recommended that a copy of this report be submitted to the relevant authorities to enable them to carry out their own site assessment and provide any comments.
- 1.1.5 The comments given in this report and the opinions expressed herein are based on the information obtained from the desk study and site reconnaissance. No intrusive investigation has been carried out to confirm the actual ground or environmental conditions.
- 1.1.6 Any risks identified in this report are perceived risks based on information reviewed. Actual risks can only be assessed following a physical investigation of the site.
- 1.1.7 This report has been based, in part, on information supplied by others. The report has been prepared based on that information being accurate.
- 1.1.8 The conclusions presented in this report are based on the guidance available at the time of preparation of the report. No liability can be accepted for the retrospective effects of any changes or amendments to legislation or guidance.
- 1.1.9 This Preliminary Risk Assessment has been conducted in general accordance with CLR 3, ref. 8.1, CLR 11, ref 8.2, BS 10175, ref 8.3, and GPLC 1, ref 8.4.

2.0 SITE

2.1 Site Location

- 2.1.1 The site is situated at Arundel Street, approximately 1.5km to the southwest of Manchester City Centre.
- 2.1.2 The site may be located by National Grid Reference 382830, 397360.
- 2.1.3 A site location plan and aerial photograph are included in Appendix 1, Figures A1.1 and A1.2.

2.2 Site Walkover and Description

- 2.2.1 A walkover survey of the site was conducted on 23rd January 2017. The walkover was carried out in general accordance with CLR 2, ref. 8.5.
- 2.2.2 The site was approximately 75m by 45m in size and is rectangular, elongated northwest to southeast.
- 2.2.3 The site boundaries comprised Mancunian Way to the northeast, Ellesmere Street to the southeast, Arundel Street to the southwest and an un-named pedestrian walkway to the northwest.
- 2.2.4 The site was sub-divided by Balmforth Street, a tarmac surfaced cul-de-sac extending towards the northeast from Arundel Street.
- 2.2.5 The northwest part of the site comprised a two-storey building in use as a gymnasium.
- 2.2.6 The southeast part of the site comprised two buildings; a two-storey warehouse / store trading as “Manchester Marble” on Balmforth Street and a four-storey building on Ellesmere Street sign written “DOT Motor Cycles.” These buildings were separated by a narrow service yard area.
- 2.2.7 Tarmac covered pay and display parking was in operation along Balmforth Street and across the front of the Gymnasium building.
- 2.2.8 The site area was sensibly level. A grassed bund, with occasional deciduous trees, separated the site area from Mancunian Way. A roughly vegetated strip separated the northern end of the DOT Motorcycle Building from the bund.
- 2.2.9 The surface area for the site is all hardstanding of tarmac with a small band of compacted gravel running along the north side of the building used as a gym.
- 2.2.10 There was no evidence of significant upfilling of ground on the site.
- 2.2.11 There was no visual or olfactory evidence of significant contamination sources noted on site.

2.2.12 Numerous surface set covers indicated a range of underground services including drainage, water supply and telephone.

2.2.13 There were no observable differences between the aerial photograph and the site conditions observed.

2.2.14 Photographs from the walkover survey are included within Appendix 2, Figures A2.1 to A2.6. A site plan is included in Appendix 1, Figure A1.3.

2.3 Historical Maps

2.3.1 A review of the history of the site has been conducted based on readily available historical maps. Details of the findings are provided in the table below. The maps referred to are provided in Appendix 4.

Map, Date and Scale	Site Description	Regional Setting
Lancashire and Furness 1848 1:10,560	Rectangular buildings located along northern part of the site. "Sandpit" labelled across site although extent is not clearly defined.	Egerton Street adjacent to northeast boundary. St George's Church is located 50m to the south. Chester Road is located 90m to the south of the site. Bridgewater Canal is located 100m to the northwest. River Irwell is located 200m to the northwest. Culvert located 35m to the south. Several mills are located around the site, the closest is a saw mill 150m to the west of the site. Canal wharves and warehouses 150m northeast. Brick field is located 700m to the northwest of the site. Western Railway is located 650m to the north of the site.
Lancashire and Furness 1851 1:500	The northern part of the site is occupied by terraced properties. These buildings are likely to be those noted on 1848 map. No sand pit marked. Worsley Street forms the northern site boundary.	Manchester South Junction and Altrincham Railway viaduct is located 40m to the north of the site. Gravel pit is located 50m to the east.
Lancashire and Furness 1891 1:500	Site is completely occupied by buildings, predominantly terraced housing. Arundel Street forms the western site boundary. Barton Street trends southwest to northeast through centre of site. Southeast corner of site occupied by "Ellesmere Works (Machinery)". Ellesmere Street forms the southern site boundary.	Ellesmere Brewery is located 10m west. Egerton Works (?Cabinet – labelling poorly legible), Hulme Corn Mills and Worsley Mills and canal basin along north side of Worsley Street. Grave yards adjacent to St George's Church is identified as disused. Extensive housing development through areas around site.
Lancashire and Furness 1894-1896 1:10,560	No significant change since 1891	Expansion of housing and commercial units to the north, west, east and south of the site. Pomona Docks is located 600m to the southwest. Infantry Barracks is located 800m to the west of the site. River Medlock is located 250m to the east.
Lancashire and Furness 1908 1:2,500	No significant change since 1891	Worsley Mills and Hulme Corn Mills are located 10m to the north. Trafford Dye Works is located 10m west within the location of the former Ellesmere Brewery. A school is located 20m to the southwest of the site. A bench mark located to the 20m southeast of the site indicates a level of 105.0feet (approx. 32.00mOD).

Map, Date and Scale	Site Description	Regional Setting
		St George's Iron works located 150m to the west. Tramway is located along Chester Road to the south of the site.
Lancashire and Furness 1909 1:10,560	No significant change since 1891	No significant change since 1909
Lancashire and Furness 1922 1:2,500	No significant change since 1891	Trafford Dye works identified as clothing factory.
Lancashire and Furness 1923 1:10,560 & Lancashire and Furness 1931-1932 1:10,560 & Lancashire and Furness 1938 1:10,560	No significant change since 1891	Recreation Ground has replaced the Cavalry Barracks.
Ordnance Survey Plan 1950 1:2,500	Motor cycle factory is located within the southwestern corner of the site occupying the former Ellesmere Works building.	A bench mark located to the 20m northeast of the site indicates a level of 101.66feet (approx. 30.98mOD). Mills to the north of the site changed usage, mills identified as fibreboard container factory, flour mill and warehousing. Clothing factory to the west of the site is identified as electrical engineering works.
Ordnance Survey Plan 1953-1963 1:1,250	Barton Street now re-named as Balmforth Street.	No significant change since 1950
Ordnance Survey Plan 1956 1:10,000 & Ordnance Survey Plan 1956-1965 1:2,500 & Ordnance Survey Plan 1960-1980 1:1,250	No significant change since 1953	No significant change since 1950
Ordnance Survey Plan 1969-1981 1:1,250	Terraced housing no longer present on site. Site occupied by commercial units reflecting current site layout.	Construction of the Mancunian Way 35m to the east. The industries around the site now identified as works, refer to mills is no longer observed.

Map, Date and Scale	Site Description	Regional Setting
Ordnance Survey Plan 1972 1:10,000 & Manchester 1975 1:25,000	No significant change since 1969	No significant change since 1969
Additional SIMs 1978-1982 1:1,250	Buildings identified as works.	Partially dismantled Railway located 550m to the north.
Ordnance Survey Plan 1980 1:10,000	No significant change since 1969	St George's Church identified at disused.
Additional SIMs 1984-1990 1:1,250 & Ordnance Survey Plan 1985 1:10,000m & Ordnance Survey Plan 1989 1:10,000 & Large-Scale National Grid Data 1992 1:1,250 & Large-Scale National Grid Data 1993-1995 1:1,250 & Ordnance Survey Plan 1994 1:10,000 & 10k Raster Mapping 1999 1:10,000	No significant change since 1969	No significant change since 1980
10k Raster Mapping 1999 1:10,000	No significant change since 1969	Construction of apartment blocks 5m west of the site. No.1 of Pomona Dock has been infilled.

Map, Date and Scale	Site Description	Regional Setting
VectorMap Local 2016 1:10,000	No significant change since 1969	No significant change since 1999

2.4 Summary

- 2.4.1 The history of the site and surrounding area reflects the rapid industrialisation of the area through the second half of the 19th century, the continuation of the area as an industrial heartland through the first half of the 20th century and the industrial decline through the 1960's.
- 2.4.2 Terraced housing partly covered the site by 1848, predominantly covering the site by 1891. A sand pit may have occupied part of the site about 1848.
- 2.4.3 An engineering works occupied the southern part of the site by 1891, later occupied by DOT Motorcycles. This building currently remains on site.
- 2.4.4 Terraced housing remained through the 1950's.
- 2.4.5 By 1969 the site had been cleared of housing and was occupied by commercial units. The DOT Motorcycle building remained on site.
- 2.4.6 The site has been bound to the north by Worsley Street since 1848, bound to the south by Ellesmere Street and to the west by Arundel Street since 1891.
- 2.4.7 The site was surrounded by a variety of industrial buildings including engineering works, dye works, cotton works and corn mills reflecting the intense industrialisation of the area from the mid 1800's to the mid 1900's. These industrial sites were developed in tandem with extensive areas of terraced housing. The Mancunian Way was built adjacent to the site in the early 1960's and has remained until the present day.

3.0 SITE SETTING

3.1 Geological Setting

- 3.1.1 Details of the geology underlying the site have been obtained from the relevant geological map of the area, ref. 8.6.
- 3.1.2 The geological map indicates superficial deposits to be absent beneath most the site. The southern part of the site is underlain by Glaciofluvial Sheet Deposits comprised of Sand and Gravel.
- 3.1.3 Bedrock comprises sandstone part of the Chester Pebble Beds Formation of Triassic age.
- 3.1.4 Although not indicated as present on the site from the geological maps, there is the possibility that Made Ground may exist on the site.

3.2 Hydrogeological Setting

- 3.2.1 The hydrogeological records, provided by the Environment Agency, indicate that the site is situated on bedrock of a Principal Aquifer, relating to the highly permeable sandstone of the underlying geology. The superficial deposits to the south of the site have been categorised as Secondary A Aquifer, relating to the Glaciofluvial Sheet Deposits.
- 3.2.2 The Environment Agency defines Principal aquifers as 'layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale'.
- 3.2.3 The Environment Agency defines Secondary A aquifers as 'permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers'.
- 3.2.4 The site is classified as being within an urban setting as designated by the Environment Agency, which therefore means that the soils are default classified as having a high leaching potential.
- 3.2.5 Soils of high leaching potential are soils that readily transmit liquid discharges because they are either shallow or susceptible to rapid by-pass flow directly to rock, gravel or groundwater.
- 3.2.6 The site is not located within a groundwater source protection zone.
- 3.2.7 There are no groundwater abstraction wells within 1km of the site.

3.3 Hydrological Setting

- 3.3.1 The nearest surface watercourse is the Bridgewater Canal, located approximately 33m to the north of the site at its closest point.
- 3.3.2 The site is not situated within an area defined by the Environment Agency as being at risk of flooding from rivers or the sea. The risk to the site is considered by the Environment Agency to be low.
- 3.3.3 The available river quality classification for the Bridgewater Canal is Grade B. The main parameters for this classification are provided below:

GQA Grade	Environmental Quality	Chemical Parameters			Biological Parameters	
		DO (%)	BOD (mg/l)	Ammonia (mgN/l)	EQI for ASPT	EQI for no. of taxa
B	Good	70	4	0.6	0.90	0.70
Ref: Landmark Envirocheck						

- 3.3.4 There are one surface water abstractions within 1km of the site. The closest abstraction at 288m to the west of the site relates to extraction of water from River Irwell for the use of general cooling at CDS Computer design systems.

3.4 Radon

- 3.4.1 The British Geological Survey, in conjunction with the Radiation Protection Division of the Health Protection Agency, ref. 8.7, indicates the site to lie within an area where there is a probability of <1% of present or future homes being above the action level of 200Bq/m³. As such, the site is not classified as a Radon Affected Area.
- 3.4.2 As such, no radon protective measures are deemed necessary for the proposed development. This is confirmed by the Building Research Establishment, Report BR211, ref 8.8.

3.5 Soil Geochemistry

3.5.1 The British Geological Survey data indicates the following concentrations of naturally occurring metals to be representative of background levels in natural soil underlying the site. The levels are based on those present in rural soils and are not necessarily representative of levels within Made Ground which may be encountered on site:

Element	Concentration (mg/kg)
Arsenic	15-25
Cadmium	<1.8
Chromium	60-90
Lead	100-200
Nickel	30-45

4.0 ASSESSMENT OF GEOTECHNICAL RISK

4.1 Geological Constraints

4.1.1 The following are brief findings relating to factors identified during the research from the Envirocheck data that may have a potential impact upon the engineering of the proposed development.

Potential Hazard	Assessed Risk	Comment
BGS Recorded Mineral Sites		None recorded
Brine Compensation Area		Outside Brine Compensation Area
Coal Mining / Mining Instability	None	
Quarrying	Moderate	Sand pit identified on historical 1848 map. Location unclear.
Collapsible Ground	Very low	
Compressible Ground	No hazard	
Ground Dissolution	No hazard	
Landslide	Very low	The site is sensibly level
Running Sand	No hazard	
Shrinking or Swelling Clay	No hazard	
Unconsolidated Made Ground	Moderate	Possible infilled sand pit.
Bearing Pressure	Moderate	Possible infilled sand pit with unknown made ground

4.2 Coal Mining Report

- 4.2.1 A Non-Residential Mining report, reference 51001346302001, has been obtained from the Coal Authority. A copy of this report is presented in Appendix 5.
- 4.2.2 The report indicates that the site is not located within the zone of likely physical influence on the surface from past underground workings.
- 4.2.3 The site is not within a zone of likely physical influence on the surface from any present underground coal workings.
- 4.2.4 Reserves of coal, however, do exist in the locality, which could be worked at some time in the future subject to feasibility, licences and planning consents.
- 4.2.5 The report indicates “the property does not lie within 200m of the boundary of an opencast site”. The site is also not within 800m of an opencast site that is awaiting determination or has been granted a licence to extract coal.
- 4.2.6 There are no records of any mine entries within or within 20m of the boundary of the site.

- 4.2.7 There is no record of a mine gas emission requiring action within the boundaries of the site.
- 4.2.8 The report shows that there has been no damage notice or claim for the site since 31st October 1994. However there have been six claims within 50m of the property boundary.
- 4.2.9 The site is not in an area in which a notice of entitlement to withdraw support under section 41 of Coal Industry Act 1994.
- 4.2.10 The site is not situated within the Cheshire Brine Subsidence Compensation District.

4.3 Geotechnical Risk Assessment

- 4.3.1 An assessment of the main hazards associated with the site is detailed below. Unless stated otherwise, the presence of such hazards are based on information from the research or reconnaissance and have not been confirmed by an intrusive investigation.

- Soil Conditions

A sand pit may have historically been located on site. This pit must have been infilled to support the development on site through the 19th and 20th centuries. The material may be unsuitable for the support of the proposed development. A moderate risk has therefore been assigned.

- Previous Use

Historical mapping indicates previous development on the site including structural and infrastructure changes. Therefore, the presence of buried structures such as services, basements and old foundations is a potential risk.

4.4 Conclusions of Geotechnical Risk Assessment

- 4.4.1 The research has identified evidence of potential hazards associated with underlying ground conditions, either natural or man-made, and therefore it is recommended that further work be carried out to confirm the presence, nature or extent of those hazards anticipated to impact on the site.

5.0 ENVIRONMENTAL SEARCHES

5.1 Potential Sources of Contamination

5.1.1 A search was made of records held by the various regulatory authorities and other statutory bodies to determine the presence or otherwise of past and current activities on or within 500m of the site which have the potential to give rise to the presence on site of contaminants. The findings are given in the table below:

Activity	On Site	Off Site (distance / direction)	Detail
Contaminated Land Register Entries	None	None within 500m	
Discharge Consents	None	Twelve up to 250m, twenty six at 250-500m	Closest at 109m north, of storm sewage overflow to unidentified receiving water. Remainder all for surface water or sewage effluent overflow discharge
Integrated and Local Authority Pollution Prevention and Controls	None	One at 175m north, one at 400m, east	Closest relates to an air pollution control for a blending and packing of bulk cement. Remainder relate to petrol filling station, paint spraying, metal coating, printing and textile processes.
Pollution Incidents to Controlled Waters	None	Five up to 250m, ten up to 500m	Closest relates (115m, southwest) to a category 3, minor incident of oils entering Bridgewater canal.
Prosecutions Relating to Authorised Processes or Controlled Waters	None	None within 500m	
Registered Radioactive Substances	None	None within 500m	
Substantiated Pollution Incident Register	None	None within 500m	
BGS Recorded Landfill Sites	None	None within 500m	
Historical Landfill Sites	None	One at 482m, north	Wilburn Street, Salford historical landfill.
Licensed Waste Management Facilities	None	Three at 250m to 500m	Closest related to mobile plant permit for soil and water remediation limited.
Local Authority Recorded Landfill Sites	None	None within 500m	
Registered Landfill Sites	None	None within 500m	
Registered Waste Transfer Sites	None	One at 358m, north	Spray shop supplies Limited
Registered Waste Treatment or Disposal Sites	None	One at 340m, north	Manchester Wharf Steel authorised scrapyard.
Hazardous Substances	None	None within 500m	
Explosive Sites	None	None within 500m	

Activity	On Site	Off Site (distance / direction)	Detail
Contemporary Trade Entries	Three	Thirty at 80-250m, forty four at 250-500m	The three trades comprised: - Manchester Radiators – boiler servicing – inactive - Futura Tech (uk) – Plastics – Inactive - Urban Angel Designs – stationery manufactures – inactive Remainder relate to a wide range of commercial and retail activities commonplace in an urban setting,
Fuel Station Entries	None	a) at 61m north b) at 377m, east	a) obsolete b) obsolete

5.2 Green Belt Areas

5.2.1 There are no designated areas or as yet un-adopted areas of Green Belt land within 1km of the site.

5.3 Designated Sites

5.3.1 A review of the Envirocheck Data was undertaken to assess whether there were any Sites of Special Scientific Interest (SSSI), National Nature Reserves (NNR) or Local Nature Reserves (LNR) which may be impacted by the development.

5.3.2 The enquiries indicated there are no SSSIs, NNRs or LNRs within 1km of the site.

5.4 Nitrate Vulnerable Zone

5.4.1 The site is not located within an area designated as a nitrate vulnerable zone.

5.4.2 The Nitrates Directive defines a nitrate vulnerable zone as:

- Surface freshwater which contains or could contain, if preventative action is not taken, nitrate concentrations greater than 50mg/l.
- Groundwater which contains or could contain, if preventative action is not taken, nitrate concentrations greater than 50mg/l.
- Natural freshwater lakes or other freshwater bodies, estuaries, coastal waters and marine waters, which are eutrophic or may become so in the near future if protective action is not taken.

6.0 ASSESSMENT OF GEOENVIRONMENTAL RISK

6.1 General

- 6.1.1 The definition of ‘contaminated land’, along with the relevant details on legislation and guidance is set out in Appendix 3.
- 6.1.2 The assessment of potential risk has been based on the guidelines given in CIRIA report C552, ref 8.9. These guidelines are summarised in Appendix 3.
- 6.1.3 The assessment of environmental risk is aimed at identifying the possible risk, if any, arising from substances used or deposited on the site, or from any other sources of land contamination, based on the principles of the pollutant linkage.
- 6.1.4 The assessment is based on the proposed development end use, taking account of present and previous use. It is based only on a review of historical maps, desk based data and site reconnaissance; therefore it contains some elements of conjecture based on professional judgement. A comprehensive risk assessment can only be made following an intrusive investigation and testing regime.
- 6.1.5 The proposed development comprises the construction of an 8 and 19 storey residential scheme with basement car parking.

6.2 Potential Sources of Contamination Identified

- 6.2.1 The research has identified the following potential sources of contamination which may form part of a pollutant linkage:
 - Contamination associated with potential made ground due to previous development on-site
 - Contamination associated with a range of historical industrial processes around the site

6.3 Potential Pathways Identified

- 6.3.1 The research has identified a number of potential pathways which are relevant to the potential sources of contamination identified above and may form part of a pollutant linkage.
- 6.3.2 Those identified are detailed within the Conceptual Site Model, along with the receptors relevant to the development on a site specific basis.

6.4 Hazard Identification

- 6.4.1 The research has identified a number of potential sources and pathways which are considered ‘likely’ to be present which, taking into account the potential receptors identified, form potential pollutant linkages and have been used in the formulation of the Conceptual Site Model.

6.5 Hazard Assessment

6.5.1 An assessment of the main sources of contamination and the potential for unacceptable risk to receptors is detailed below. Unless stated otherwise, it is considered 'likely' that a potential source is present at this stage, in order to provide a preliminary estimation of the risk and therefore determine the need for further work.

- Human Health

There is the potential for the presence of contamination associated with the former uses and Made Ground on site. The risk to end users of the site is considered to be very low due to the nature of the development comprising buildings and hardstanding. Risks may be limited to the construction period.

- Construction Material

A moderate risk has been assigned due to potential chemical attack on construction materials emplaced within the Made Ground.

- Controlled Waters

The hydrogeological records, provided by the Environment Agency, indicate that the site is situated on bedrock of a Principal Aquifer, relating to the highly permeable sandstone of the underlying geology. The superficial deposits to the south of the site have been categorised as Secondary A Aquifer, relating to the Glaciofluvial Sheet deposits as such, any consequence of contamination to the water environment is considered to be minor, and therefore a low risk level has been assigned.

6.6 Conceptual Site Model

6.6.1 The research has therefore identified the following pollutant linkages that require further consideration and have been used to formulate the Conceptual Site Model.

Potential Contamination Sources	Potential Contaminants of Concern	Potential Pathways	Receptor Group
Possible contamination associated with made ground	Inorganic Compounds •Metals •Cyanide Organic Compounds •TPH •PAH Others •Asbestos	• Dermal contact • Inhalation of contaminated dust • Vapour inhalation	Human Health • Construction workers
		• Lateral migration • Infiltration	Controlled Waters • Groundwater
		• Direct contact of contaminants with building materials	Building Materials or Services • Concrete • Plastic pipes and services • Structural iron & steel work

6.7 Conclusions of Geoenvironmental Risk Assessment

- 6.7.1 The research has identified evidence of potential sources of contamination on or which may impact on the site.
- 6.7.2 After construction, the site will be covered with buildings and hardstanding therefore the risk to end users are considered very low.
- 6.7.3 There may be a low risk to workers during the construction phase.
- 6.7.4 The development may alter the existing drainage routes or infiltration pathways and may therefore pose a low risk to the water environment.
- 6.7.5 It is recommended that further work be carried out to confirm the presence, nature or extent of any contamination which is anticipated to impact on the site.

6.8 Consultation

6.8.1 During development, consultation may be required for a number of reasons with a number of regulatory Authorities. The following provides an indication as to the most likely Authorities with which consultation may be required:

- **Local Authority.** There may be a planning condition regarding contamination and consultation will be required with a designated Contaminated Land Officer within the Environmental Health Department. The Local Authority is generally concerned with human health risks.
- **Environment Agency.** Where a site is within a groundwater protection zone or has been designated as a special site, the Environment Agency is likely to be involved to ensure that controlled waters are protected.
- **National House Building Council, NHBC.** Section 4.1 of the NHBC Standards, ref 8.10, requires land management to be addressed. For a new housing development to be approved by the NHBC, any contamination will require remediation accompanied by a validation report.

6.8.2 Based on the results of any consultation, there may be specific investigation and/or remediation requirements imposed by one or more of the Authorities.

7.0 RECOMMENDATIONS

7.1 Further Work

7.1.1 The following scope of works is recommended to collect the required data:

- Soil sampling and analysis to inform contamination risks associated with the construction period.
- The sinking of boreholes for the recovery of samples for geotechnical analysis to aid foundation design.

7.1.2 An asbestos report may be required before undertaking demolition.

7.2 Other Considerations

7.2.1 There are several other areas of research which are beyond the scope of this report. The following may be applicable to the site, either on the outcome of consultation with a regulatory body or as a result of the research for this Preliminary Risk Assessment. They include:

- **Unexploded Ordnance (UXO).** There may be a requirement for a UXO report, dependant on the site location, historical use and surrounding site history, as well as the type or size of the development. Areas of low potential for UXO may include rural greenfield sites, well away from any military installations; however this does not mean there is no risk in such areas. The risk increases within urban areas, particularly those with wartime installations and infrastructure (e.g. power stations, industrial centres). Clearly wartime military establishments and their close surroundings have to be classed as high risk. This requirement may be identified within a planning condition.

APPENDIX 3
ENVIRONMENTAL RISK

APPENDIX 3

ENVIRONMENTAL RISK ASSESSMENT

A3.1 STATUTORY FRAMEWORK AND DEFINITIONS

A3.1.1 The statutory definition of ‘contaminated land’ is defined in Part IIA of the Environmental Protection Act 1990, ref 8.11, which was inserted by Section 57 of the Environment Act 1995, ref 8.12, and came into force in England in 2000, as;

‘any land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

(a) significant harm is being caused or there is a significant possibility of such harm being caused; or

(b) pollution of controlled waters is being, or is likely to be, caused’.

A3.1.2 In Scotland, this has been amended by the Water Environment and Water Services (Scotland) Act 2003, ref 8.13, to *‘significant pollution of the water environment is being caused or there is a significant possibility of such pollution being caused’.*

A3.1.3 The purpose of Part IIA was to help address the problems caused by historical contamination, with the voluntary remediation of such land encouraged without the use of the Act. The planning regime assists in this, with Planning Policy Statement 23: Planning and Pollution Control (PPS23), ref 8.14, published in 2004, setting out the minimum requirements for the remediation of land affected by contamination as *‘after carrying out the development and commencement of its use, the land should not be capable of being determined as contaminated land under Part IIA of the EPA 1990’.*

A3.1.4 The UK guidance on the assessment of contaminated has developed as a direct result of the introduction of these two Acts. The technical guidance supporting the legislation was originally summarised in a number of key documents collectively known as the Contaminated Land Reports (CLRs), a proposed series of twelve documents. Seven were originally published in March 1994, four more were published in April 2002, while the final guidance document, CLR 11 was published in 2004. CLR7 to 10 were withdrawn in 2008, with CLR 9 and 10 effectively replaced by the Environment Agency in the form of Science Reports SR2, ref 8.15 and SR3, ref 8.16.

A3.1.5 CLR11 remains valid and sets out the framework of the investigation process, with the overall approach one of risk management, with risk given the definition of *‘a combination of the probability or frequency, of occurrence of a defined hazard and the magnitude of the consequences of the occurrence’.* In establishing whether a site fulfils the statutory definition of ‘contaminated land’ it is necessary to identify whether the three essential elements of risk exist. These are defined as:

- A contaminant - a substance which is in, on or under the land and has the potential to cause harm or to cause pollution of controlled waters;
- A receptor - something which could be adversely affected by a contaminant, such as people, an ecological system, property or a water body; and
- A pathway – a route or means by which a receptor can be exposed to, or affected by, a contaminant.

- A3.1.6 A ‘*pollutant linkage*’ may be defined as the link between a contaminant ‘*source*’ and a ‘*receptor*’ by means of a ‘*pathway*’. There may be none, one or many pollutant linkages existing on a site, which may utilise the same or different sources, pathways and receptors, which may change over the passage of time.
- A3.1.7 Each pollutant linkage that exists in respect of the land in question must fulfil one or more of the following criteria:
- significant harm is being caused to the receptor in the pollutant linkage,
 - there is a significant possibility of significant harm being caused to that receptor,
 - there is (significant) pollution of controlled waters (the water environment) which constitute the receptor, or
 - pollution of controlled waters is likely to be caused
 - (there is a significant possibility of such pollution being caused).
- A3.1.8 A pollutant linkage indicates that all three elements have been identified. The site can only be defined as ‘Contaminated Land’ under Part IIA if a pollutant linkage exists and the criteria above are met.
- A3.1.9 The main potential receptors include:
- 1) Humans – current site occupants, construction workers, future site users and neighbouring site users.
 - 2) Controlled Waters – surface water and groundwater resources
 - 3) Property – including buildings, crops, livestock and pets
 - 4) Ecological systems – including current/future site and neighbouring vegetation
- A3.1.10 The main potential pathways to be considered include:
- a) Ingestion and/or inhalation.
 - b) Uptake of contaminants via cultivated vegetables.
 - c) Dermal contact
 - d) Migration through permeable strata
 - e) Drains or services
 - f) Direct contact with building materials and services
 - g) Fire and explosion

A3.2 ASSESSMENT METHODOLOGY

- A3.2.1 The guidance proposes a four-stage assessment process for identifying potential pollutant linkages on a site. These stages are set out in the table below:

No.	Process	Description
1	Hazard Identification	Establishing contaminant sources, pathways and receptors (the conceptual model).
2	Hazard Assessment	Analysing the potential for unacceptable risks (what linkages may be present and what could be the effects?).
3	Risk Estimation	Trying to establish the magnitude and probability of the possible consequences (what degree of harm might result and to what receptors, and how likely is it).
4	Risk Evaluation	Deciding whether the risk is unacceptable.

- A3.2.2 Stages 1 and 2 develop a '*conceptual model*' based upon information collated from desk based studies, and reconnaissance of the site (a walkover survey). The walkover survey should be conducted in general accordance with CLR 2. The formation of a conceptual model is an iterative process and as such, it should be updated and refined throughout each stage of the project to reflect any additional information obtained.
- A3.2.3 The extent of the desk based research and enquiries to be conducted should be in general accordance with CLR 3. The information from these enquiries is presented in a preliminary risk assessment report with recommendations, if necessary, for further work based upon the conceptual model. In the absence of specific information on contamination anticipated to be encountered, specific DoE 'Industry Profiles' provide guidance on the nature of contaminants relating to a variety of industrial processes and should be used as the basis for determining which contaminants are more likely to be present on a site.
- A3.2.4 If potential pollutant linkages are identified within the conceptual model, an intrusive ground investigation and report will be recommended. The investigation should be planned in general accordance with CLR 4, and BS10175. The number of exploratory holes and samples collected for analysis should be consistent with the size of the site and the level of risk envisaged. This will enable a generic quantitative risk assessment (GQRA) to be conducted, at which point the conceptual model can be updated and relevant pollutant linkages can be identified.
- A3.2.5 A two-stage investigation may be more appropriate where time constraints are less of an issue. The first stage investigation may be conducted as an initial assessment for the presence of potential sources, with the second being more refined in order to delineate or further characterise any contamination or the physical properties of the site.

A3.3 RISK EVALUATION

A3.3.1 The risk evaluation is a qualitative method for interpreting the data from the hazard estimation stage. It involves the classification of the:

- magnitude of the potential ‘consequence’ (severity) of the risk occurring and:
- magnitude of the ‘probability’ (likelihood) of the risk occurring.

A3.3.2 These are defined in the following sections:

A3.4 CLASSIFICATION OF CONSEQUENCE

Classification	Definition	Examples
Severe	Short-term (acute) risk to human health likely to result in ‘significant harm’ as defined by the Environment Protection Act 1990, Part IIA. Short-term risk of pollution (note: Water Resources Act contains no scope for considering significance of pollution) of sensitive water resource. Catastrophic damage to buildings property. A short-term risk to a particular ecosystem, or organism forming part of such ecosystem (note: the definitions of ecological systems within the Draft Circular on Contaminated Land, DETR, 2000).	High Concentrations of cyanide on the surface of an informal recreation area. Major spillage of contaminants from site into controlled water. Explosion, causing building collapse can also equate to a short-term human health risk if buildings are occupied.
Medium	Chronic damage to Human Health (‘significant harm’ as defined in DETR, 2000). Pollution of sensitive water resources (note: Water Resources Act contains no scope for considering significance of pollution). A significant change in a particular ecosystem, or organism forming part of such ecosystem, (note: the definitions of ecological systems within Draft Circular on Contaminated Land, DETR, 2000).	Concentrations of a contaminant from site exceed the generic, or site-specific assessment criteria. Leaching of contaminants from a site to a major or minor aquifer. Death of a species within a designated nature reserve.
Mild	Pollution of non-sensitive water resources. Significant damage to crops, buildings, structures and services (‘significant harm’ as defined in the <i>Draft Circular on Contaminated Land</i> , DETR 2000). Damage to sensitive buildings/ structures/services or the environment.	Pollution of non-classified ground water. Damage to building rendering it unsafe to occupy (eg foundation damage resulting in instability).
Minor	Harm, although not necessarily significant harm, which may result in a financial loss, or expenditure to resolve. Non-permanent health effects to human health (easily prevented by means such as personal protective clothing etc). Easily repairable effects of damage to buildings, structures and services.	The presence of contaminants at such concentrations that protective equipment is required during site works. The loss of plants in landscaping scheme. Discoloration of concrete

- A3.4.1 In theory, both severe and medium classification can result in death. The differential is that severe relates to short term risk while medium relates to long-term risk. Therefore, the classification of severe requires urgent action while medium may require urgent action but usually long term action would be sufficient.

A3.5 CLASSIFICATION OF PROBABILITY

Classification	Definition
High likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term, or there is evidence at the receptor of harm or pollution
Likely	There is a pollution linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.
Low likelihood	There is a pollution linkage and circumstances are possible under which an event could occur However, it is by no means certain that even over a longer period such event would take place, and is less likely in the shorter term
Unlikely	There is a pollution linkage but circumstances are such that it is improbable that an event would occur even in the very long term

- A3.5.1 For the purposes of this preliminary risk assessment, any source of contamination that has been identified by professional judgement as potentially impacting on the site has been classified as being 'likely' to be present, unless proven otherwise by intrusive investigation.

A3.6 COMPARISON OF CONSEQUENCE AGAINST PROBABILITY

- A3.6.1 These classifications are compared to indicate the risk presented by each pollutant linkage. Once the consequence and probability have been classified they can be used to produce a risk category as below:

		Consequence			
		Severe	Medium	Mild	Minor
Probability	High likelihood	Very high risk	High risk	Moderate risk	Moderate/low risk
	Likely	High risk	Moderate risk	Moderate/low risk	Low risk
	Low likelihood	Moderate risk	Moderate/low risk	Low risk	Very low risk
	Unlikely	Moderate/low risk	Low risk	Very low risk	Very low risk

A3.6.2 The action required for the classified risks are as follows:

Very high risk	There is a high probability that severe harm could a risk to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realised, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required
High risk	Harm is likely to arise to a designated receptor from an identified hazard. Realisation of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short term and are likely over the longer term
Moderate risk	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term
Low risk	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realised, would at worst normally be mild.
Very low risk	There is a low possibility that harm could arise to a receptor. In the event of such harm being realised it is not likely to be severe.

APPENDIX 4
ENVIROCHECK REPORT

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Lancashire And Furness
Published 1908
Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Map Name(s) and Date(s)

Lancashire And Furness
Published 1848
Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local
Published 2016
Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Summary

Has the search report highlighted evidence or potential of		
1	Past underground coal mining	No
2	Present underground coal mining	No
3	Future underground coal mining	Yes
4	Mine entries	No
5	Coal mining geology	No
6	Past opencast coal mining	No
7	Present opencast coal mining	No
8	Future opencast coal mining	No
9	Coal mining subsidence	No
10	Mine gas	No
11	Hazards related to coal mining	No
12	Withdrawal of support	No
13	Working facilities order	No
14	Payments to owners of former copyhold land	No
15	Information from the Cheshire Brine Subsidence Compensation Board	No

For detailed findings, please go to page 4.

Detailed findings

1. Past underground coal mining

The property is not within a surface area that could be affected by past underground mining.

2. Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3. Future underground coal mining

The property is not in an area where the Coal Authority has plans to grant a licence to remove coal using underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4. Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

5. Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6. Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7. Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8. Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9. Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10. Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

11. Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

12. Withdrawal of support

The property is not in an area where a notice to withdraw support has been given.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13. Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14. Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

15. Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

Additional remarks

Information provided by the Coal Authority in this report is compiled in response to the Law Society's Con29M Coal Mining and Brine Subsidence Claim enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL. Please note that Brine Subsidence Claim enquiries are only relevant for England and Wales. This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions applicable at the time the report was produced.
