1.0 INTRODUCTION

1.1 Instruction

- 1.1.1 GeoCon Site Investigations Ltd (GeoCon) have been commissioned by Artal UK Ltd (AUK) on behalf of Penrose Manor Ltd (PML) to undertake a Phase I Preliminary Risk Assessment (PRA) on land at Snell Street, Manchester.
- 1.1.2 It is understood that a PRA is required to assist with a future planning application for a proposed residential development at the site.
- 1.1.3 This report is therefore provided to establish the potential for contamination at the site as a result of current and historic land uses both on site and within influencing distance of the site, to understand the potential type of contamination that may be present, and to identify the anticipated ground conditions and any potential geological and or geotechnical impact on the proposed development.
- 1.1.4 This report is written in accordance with the guidance set out in Land Contamination Risk Management (LCRM), Guiding Principles for Land Contamination (GPLC) 1 – 3, and the National Planning Policy Framework (NPPF).

1.2 Scope of Works

- 1.2.1 Prior to commencing the site works the proposed scope of investigation was as follows, however the proposed scope will be subject to change dependent upon site conditions, access, restrictions and obstructions. The actual works undertaken following the completion of the site works and any on site amendments are detailed in section 3.0.
- To undertake a site walkover and reconnaissance.
 - To appraise the land use history of the site by the examination of available historical plans.
 - To assess the environmental setting of the site with specific reference to geology, mining & quarrying, hydrogeology and hydrology.
 - To gain an understanding of any concerns of the regulatory authorities (Local Authority Planning, Building Control and Environmental Health departments and the Environment Agency) regarding local land filling, flooding, mining, quarrying and other concerns.
 - To produce a Preliminary Conceptual Site Model (CSM).

1.3 Previous Investigations

- 1.3.1 GeoCon have not been provided with any previous investigation reports and are unaware that any have been carried out to date.

1.4 Reliance and Limitations

- 1.4.1 This report has been prepared using published information and information provided by AUK and their professional advisers which has been made available to GeoCon at the time of writing only. GeoCon accepts no liability for any changes resulting from new information which has become available since this time.
- 1.4.2 This report is provided for the sole use of the client and their professional advisors and is confidential to them unless agreed otherwise in writing. This report may only be used and relied on once the work has been paid for in full. GeoCon owes no duty of care and has no liability to any third party who is not authorised by GeoCon to use this report. Any unauthorised third parties using information contained in this report do so at their own risk.

- 1.4.3 This assessment has been carried out to determine the potential risks posed to future end users, along with other key receptors, resulting from potential contamination at the site, based on the proposed development. Should any revisions in the development proposals result in a change any assessment parameters detailed in this report, a re-assessment of the risk should be carried out.
- 1.4.4 Whilst this report may reference observations made regarding the presence of features/ issues such as invasive species, ACM, site drainage and evidence of structural abnormalities, this report does not constitute specialist surveys on these matters. Should further specialist surveys be carried out in this regard, the findings of these should be reported to GeoCon so that we may determine if this has any impact on the findings of this report.
- 1.4.5 The assessment and interpretation of the factual data obtained as part of this Phase I Preliminary Risk Assessment has been undertaken in accordance with standard consulting practise and with current national and international guidance.
- 1.4.6 This report presents the observations made during the Phase I Preliminary Risk Assessment and the factual data obtained. The conclusions and recommendations in this report are limited to those which can be made based on the findings of the survey and information provided by third parties. GeoCon assumes all third party data to be true and correct. No responsibility can be accepted by GeoCon for inaccuracies in the information provided by any other party.
- 1.4.7 This report is written in the context of an agreed scope of works and should not be used in a different context. Furthermore, new information, improved practises, and changes in legislation may require the reinterpretation of the report in whole or in part after its original issue. GeoCon reserve the right to alter their conclusions and recommendations in the light of further information that may become available.
- 1.4.8 It should be noted that ground conditions including contaminant concentrations and groundwater levels may vary spatially with time. This factor should be given due consideration in the event that the information contained within this report is used after any significant period of time has elapsed.

2.0 SITE LOCATION AND DESCRIPTION

2.1 Site Location

- 2.1.1 The site is located at land off Snell Street, Manchester, at approximate National Grid Reference NGR: 385640, 398170 (centre of the site).
- 2.1.2 A site location plan is presented as Drawing No. GSI 1450/01 in Appendix A.

2.2 Site Reconnaissance

- 2.2.1 A site reconnaissance was carried out on the 31st March 2021. Details from the site walkover are included in the site description below.

2.3 Site Description

- 2.3.1 The site is a generally rectangular shaped piece of land with an approximate area of 0.12Ha.
- 2.3.2 The topography of the site is generally dipping gently to the south.
- 2.3.3 The site is currently occupied by a masonry warehouse structure with associated hardstanding comprising of concrete. The site boundary, in particular the eastern boundary, has become overgrown with grass and shrubs.
- 2.3.4 An approximate distribution of the surface covering is given below in Table 2.1: Site Surface Covering

Table 2.1: Site Surface Covering

Type of Surface Cover	Distribution (%)
Soft Ground (grassed and landscaped areas)	5
Hardstanding	55
Roadways	0
Buildings	40
Water (ponds, streams)	0

- 2.3.5 The site is bounded by Snell Street to the west, and residential properties to the north, east and south.
- 2.3.6 Access to the site is via Snell Street to the southwest.
- 2.3.7 A selection of photographs from the site walkover are presented as GSI 1450/02 in Appendix B.

2.4 Surrounding Area

- 2.4.1 The current surrounding land use to the site is generally residential properties in all directions.
- 2.4.2 The topography of the surrounding area is generally dipping to the south.

2.5 Future Site Usage

- 2.5.1 It is currently proposed to construct a series of nine new terraced two storey masonry and pitched roof properties at the site which includes a demolition of the existing structure on site.
- 2.5.2 A proposed development plan has been provided by AUK, drafted by Calderpeel Architects, dated 5th October 2021, referenced 20096 (FE) 001.

This assessment has been carried out with reference to this proposed development plan, any changes to the proposed development may result in this assessment requirement updating.

3.0 SITE HISTORY

3.1 Site History

- 3.1.1 The history of the site has been determined from available historical maps obtained as part of the Envirocheck Report and via the Envirocheck Analysis online historical mapping tool. The history of the site and of the surrounding area is summarised overleaf in Table 3.1: Site History. It should be noted that some of the maps come with little to no coverage.
- 3.1.2 The information presented overleaf in Table 3.1: Site History, is given based on the distance and direction from the closest point of each feature to the site. The table presents the data broken down into the following categories: - feature; the potential use of each feature where applicable; the date each particular feature is first observed; the direction of each feature from the site; the approximate distance of each feature from the site; the approximate area of each feature; and any other relevant information regarding the site and surrounding area in general.

3.2 Aerial Photography

2000 Aerial Photograph:

- 3.2.1 The 2000 aerial photography shows the site appearing to be generally occupied by the existing building to the south and hardstanding to the north. The surrounding area generally developed with residential, commercial, and industrial properties, with the exception of a car park to the southwest where current buildings stand, and land adjacently northwest and southeast which is covered by vegetative landscaping.

Recent (2021) Aerial Photograph:

- 3.2.2 Recent aerial photography, dated 2021, shows the site appearing to be generally occupied by the existing building to the south and hardstanding to the north. The surrounding area being fully developed with residential, commercial and industrial properties.

Table 3.1: Site History

Feature	Date first observed	Date no longer shown	Direction from site	Distance (m) from site	Area (m²)	General notes
Warehouse	1979	Present	SE	On site	401	N/A
Glass works	1932	1979	NW	On site	1416	N/A
Terraced properties	1848	1932	NE	On site	480	N/A
Unnamed commercial property	1848	1932	SW	On site	574	N/A
Cotton Mill	1848	1979	SW	6	5062	1932: Marked as a public assistance institution.
Vulcan (Iron) Works	1848	Still Present	W	30	6138	1908: Expanded to incorporate cotton mill to southwest. 1951: Marked as the Vulcan Works (Textile Machinery). 1958: Marked as a Works.
Garage	1989	2006	S	36	2947	2009: replaced by unnamed building.
Electricity substation	1989	Still Present	S	56	N/A	N/A
Cotton Mill	1848	1908	W	92	4445	1891: Marked as disused. and replaced by warehouses, which include land to the south.
Soho (Iron) Works	1848	2006	NW	104	11468	1979: Marked as a depot.
Cotton Mill	1908	2006	NW	109	3222	1932: Marked as a bag factory.
Garage	1989	2006	SW	126	1785	N/A
Paint works	1953	1958	SE	129	912	N/A
Saw Mill	1891	1970	S	130	3241	N/A
Electricity substation	1952	Still Present	W	131	N/A	N/A
Chemical Works	1908	2006	W	138	4368	1932: Southwestern part marked as an iron works. 1979: Marked as a depot.
Victoria Cotton Mill	1848	2006	N	164	3843	1990: Marked as the Victoria Industrial Estate. 2006: Building demolished.
Victoria Mill Industrial Estate	2016	Still Present	N	164	3843	Constructed on approximately same footprint as the Victoria Cotton Mill (see above entry).
Chair Frame Works	1948	1970	S	164	576	N/A
Ashton Canal	1848	Still Present	W	186	N/A	N/A
Cotton Mill	1848	2006	N	202	2152	N/A
River Medlock	1848	Still Present	E	203	N/A	Flowing southwest.
Ancotes Yale Dye Works	1848	1932	SE	223	2355	N/A
Providence Foundry	1891	Still Present	SE	228	2311	1991: Marked as a works
Site and surrounding area in general	From earliest mapping dated 1848, the site is shown to be a series of terraced properties to the northeast, fronting onto the now no longer present Buckland Street, which historically ran along the northeaster boundary. The southwest of the site appears to be occupied by un-named properties likely to be commercial due to their size, fronting to Snell Street, some of which include courtyard areas. By 1932, these properties were replaced by a Glass works which occupied the whole site, until mapping dated 1979. From 1979, until present a building indicated to be a warehouse is situated in the southeast of the site, with the northeast comprising an area of hardstanding. The surrounding area has undergone various phases of development and redevelopment since earliest mapping in 1848, but generally appears to comprise commercial and industrial properties to the west, with residential properties to the east.					

4.0 ENVIRONMENTAL SETTING

4.1 General

- 4.1.1 A number of third parties have been approached to collate information relating to the site, its environmental setting, and any issues pertaining. The following third party sources have been utilised which are outlined in Table 4.1: Sources of Information:

Table 4.1: Sources of Information

Source	Information
Landmark	Envirocheck Report Geology Report
British Geological Survey (BGS)	The BGS Geological Map Sheet 85 Manchester solid & drift mapping BGS Open Geoscience online geological mapping tool
Ordnance Survey	OS Open Data online mapping tool
Coal Authority	Online Gazetteer of England and Wales Coal Mining Report
Environment Agency (EA) Online	Water Quality Data and Aquifer designation

- 4.1.2 The Landmark Envirocheck report is provided in Appendix C and all relevant parts of other third party responses, where available, are presented within the indicated appendices.

4.2 Published Geology

- 4.2.1 The British Geological Survey shows the site to be underlain by the geological succession outlined below Table 4.2: Published Geology.

Table 4.2: Published Geology

Geology	Description /strata
Artificial	None recorded
Superficial	Till
Bedrock	Manchester Marls Formation and Collyhurst Sandstone Formation

- 4.2.2 There are no known artificial deposits recorded underlying the site.
- 4.2.3 The superficial geology recorded underlying the site is shown to be Till. No BGS description is currently available for Till; however, these deposits are generally comprised of sandy gravelly clay with cobbles and varying silt sand and gravel content.
- 4.2.4 The bedrock geology beneath the site is shown to be the Manchester Marls Formation to the west, underlain by the Collyhurst Sandstone Formation, which outcrops to the east. The Manchester Marls Formation which is generally described as *'Red marl (calcareous mudstone and siltstone) with thin beds of fossiliferous marine limestone and dolomite; locally green; sandy in places especially in top part; local breccias and pebbly beds'*, with a conformable change with the underlying Collyhurst Sandstone Formation, occasionally with a pebbly bed present. The Collyhurst Sandstone Formation is generally described as *'a soft red sandstone with abundant beds of "millet seed" sand grains alternating with beds of fine-grained sharp sand with some interbedded grey sandstones locally'*. (BGS online lexicon of rock units general description).

4.3 Mining, Subsidence and Foundations

- 4.3.1 There are no BGS recorded mineral sites within 250m of the site boundary.

4.3.2 The Coal Authority indicates that the site is located within a coal mining area and that a Coal Authority mining report is required for the site. Subsequently a Coal Authority mining report has been commissioned for the site; and the details are given below.

- The property is within an area of past underground coal mining from seams at depth of 340m to 1110m, last worked in 1961. Any ground movement due to coal mining activity should now have ceased.
- The property is not within the likely zone of influence from any coal workings from any present or future planned underground coal mining or any past, present or future planned opencast or underground coal mining.
- There are no known mine entries within the site boundary or within 20m of the site boundary.
- The Coal Authority has not received any damage notices for the property or properties within 50m of the site since 31st October 1994.
- There is no record of any mine gas emissions requiring action by the Coal Authority at the site.
- The property has not been subject to remedial works by or on behalf of the Coal Authority.

4.3.3 The Coal Authority Report is presented in Appendix D.

4.3.4 The site is not located within a brine extraction area.

4.3.5 Landmark indicates that the risk from non-coal mining is likely.

4.3.6 The British Geological Survey provide risk ratings for the potential geological hazards outlined below in Table 4.3: Potential Geological Hazards.

Table 4.3: Potential Geological Hazards

Potential Geological Hazard	Hazard Potential
Collapsible Ground	Very low
Compressible Ground	No hazard
Ground Dissolution	No hazard
Landslides	Very low
Running Sands	Very low
Shrinking or Swelling Clay	Very low

4.4 Potential Contamination Sources

4.4.1 The following potential sources of contamination have been identified.

Fuel Storage

4.4.2 There are no fuel station entries within 250m of the site.

Potentially Contaminative Uses

4.4.3 There are thirteen contemporary trade directories within 250m of the site. The closest to the site is located approximately 69m to the northwest for chemist and pharmacists suppliers, which is classed as active. Remaining pertinent entries are all inactive and include: clothing and fabric manufacturers, 73m and 87m northwest, and 789 and 790m north, a printers located 87m northwest, a salvage dealers located 102m northwest, and car dealers or garages or component manufacturers, located 55m southwest, 180m west 225m north, with a general engineers located 192m north.

In addition to the above, there is one local authority pollution prevention and control located 157m southwest for air pollution, regarding respraying of road vehicles.

Hazardous Substances

- 4.4.4 There are no hazardous substance uses recorded within 250m of the site.

Landfills and Waste

- 4.4.5 There is one historical landfill site within 250m of the site boundary. Further details are given below:

Historical Landfill Site

- Peter Birse Ltd, 234m southeast, dated 1st September 1986 to 31st December 1986 for inert and industrial waste.

- 4.4.6 Information provided by Landmark indicates that there are four areas within 250m of the site where the potential for infilling is possible. These include unknown areas of filled ground from pits, quarries, or former ponds marshes, rivers, streams or docks etc which may have been infilled within unknown materials. These are located from beyond 201m from site.
- 4.4.7 Additionally, there are large areas on BGS mapping indicated as artificial ground to the south, east and west of the site, which at the closest are approximately 55m southwest of the site. These areas may have been infilled with unknown materials.
- 4.4.8 Made Ground is likely to be present from previous site development on the site, with unknown thickness and composition.

4.5 Radon

- 4.5.1 The Envirocheck report shows the site is located within a lower probability radon area, as less than 1% of homes are above the action level. Therefore, no radon protection measures are necessary in the construction of new dwellings or extensions.

4.6 Hydrogeology

Superficial Deposits

- 4.6.1 The Environment Agency aquifer classification scheme indicates that the superficial aquifer designation for the site is classed as Secondary B Aquifer which are generally described as *'predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers'* (EA general description).

Bedrock

- 4.6.2 The Environment Agency aquifer classification scheme indicates that the bedrock aquifer designation for the site is classed as Principle Aquifer which are generally described as *'these are layers of rock or drift deposits that have high intergranular and/or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer'* (EA general description).

Groundwater Abstractions

- 4.6.3 There is one licenced groundwater abstraction point within 1000m of the site, which is located approximately 727m to the southwest for general cooling at a Rubber Works. There are a further fourteen licensed groundwater abstraction points between 1000 and 2000m of the site for general cooling and for heat pumps.
- 4.6.4 It is possible that there may be private unlicensed water abstractions that exist locally in the area.
- 4.6.5 There are no Source Protection Zones (SPZ) within 2000m of the site.

4.7 Hydrology

- 4.7.1 The nearest surface watercourse to the site is the Ashton Canal located approximately 194m to the northwest. The nearest surface river is the River Medlock, located approximately 204m to the east.
- 4.7.2 The nearest EA General Quality Assessment (GQA) data available for the Ashton Canal within relevant distance to the site is for a sampling point located approximately 140m to the northwest of the site and gives a Grade of C.
- 4.7.3 The nearest EA General Quality Assessment (GQA) data available for the River Medlock within relevant distance to the site is for a sampling point located approximately 341m to the east of the site and gives a Grade of E.
- 4.7.4 There is one discharge consent within 250m of the site. This consists of a revoked authorisation for waste water treatment works into the Manchester and Ashton Canal of discharge of other matter – surface water, located 247m northwest.
- 4.7.5 There are three pollution incidents to controlled waters within 250m of the site. The nearest was located 206m to the north, classed as a category 3 – minor incident into the Ashton Canal, with no pollutant noted as found, dated May 1996. The second entry is noted as 245m to the northwest, classed as a category 3 – minor incident into the Ashton Canal with an unknown pollutant, dated May 1993. The third record is located 247m to the northwest, classed as a category 3 – minor incident into the Ashton Canal, with no pollutant noted as found, dated April 1996.

Surface Water Abstractions

- 4.7.6 There are two licenced surface water abstraction points within 1000m of the site. The nearest to the site is located approximately 653m to the northeast for Tar Distillers, from the Ashton Canal. The second entry is located 658m to the north for an unrecorded abstraction from the Ashton Canal. There are a further six licensed surface water abstraction points between 1000 and 2000m of the site for cooling, dust suppression and unrecorded uses.
- 4.7.7 It is possible that there may be private unlicensed water abstractions that exist locally in the area.

4.8 Flooding

- 4.8.1 Envirocheck indicates that the site is not located within an area at risk of flooding or within 250m of an area at risk of flooding from rivers or sea.
- 4.8.2 Envirocheck indicates that the site is not located within an area at risk of flooding or within 250m of an area at risk of flooding from surface waters (i.e. pluvial – rainfall, sewers, drains etc.).
- 4.8.3 The site lies within an area that may be affected by flooding from groundwater below ground floor level.

4.9 Environmentally Sensitive Sites

- 4.9.1 There are no significant environmentally sensitive sites within 250m of the site.

5.0 PRELIMINARY ENVIRONMENTAL RISK ASSESSMENT

5.1 Introduction

- 5.1.1 In statutory guidance regarding potentially contaminated land, risk assessments are used as a technique on a site-specific basis to identify potential environmental issues. As recommended by BS 10175 an Initial Conceptual Generic Model has been formulated which defines the 'pollutant linkage' through source, pathway and receptor methodology. All three must be present in order to pose a risk to the end users and to the environment; i.e. if there is no pathway between the source and the receptor, then there is no 'pollutant linkage' and hence negligible risk to the receptor.

5.2 Risk Assessment Methodology

- 5.2.1 The purpose of a Phase I Preliminary Risk Assessment (PRA) is to obtain information regarding the site to gain a preliminary understanding of potential environmental issues and the potential for land contamination. This information includes existing and proposed site uses, the history of the site and surrounding area, and the environmental setting. The information obtained is used to develop a Conceptual Site Model (CSM), which describes sources (potential hazards), pathways, and receptors, which may be relevant to the site. The following definitions have been adapted from Part IIA of the Environmental Protection Act (EPA) 1990:

- 5.2.2 **Source** – A source can be defined as a potential contaminant, substance, or condition that has the potential to cause harm to the environment, humans or other flora and fauna.
- 5.2.3 **Pathway** – A pathway is defined as the route by which a source is brought into contact with a receptor. This can include the transport of contamination via groundwater, wind borne dust, vapours, excavation and deposition, dermal contact, ingestion and inhalation.
- 5.2.4 **Receptor** – Receptors are defined as anything that can be affected by a source such as human beings, flora and fauna, other living organisms, groundwater and surface water, physical systems and built structures.
- 5.2.5 Some of the above, such as groundwater, surface water, flora, and fauna can be considered as both pathways and receptors.
- 5.2.6 A risk may be considered present if all three of the above exist and thereby form a “**pollutant linkage**”.

5.3 Outline Conceptual Site Model

- 5.3.1 As part of this Phase I Preliminary Risk Assessment, the following potential sources, pathways and receptors have been considered and are discussed below.

Potential Sources (on and off site):

- 5.3.2 The following are potential sources of contamination that have been considered: -
- Made Ground / reworked soils and rock beneath the site associated with construction and demolition on site and of the surrounding area.
 - Potential for contamination to have occurred at the site as a result of historical and contemporary land uses and processes on the site and within influencing of the distance.
 - Potential for mobile and leachable contamination at the site associated with historical and contemporary land uses and processes both on site and within influencing of the distance.

- Potential for volatile and semi-volatile contamination at the site associated with historical and contemporary land uses and processes both on site and within influencing of the distance.
- Historic electrical substations on the site and within influencing of the distance.
- Potential for hazardous ground gasses associated with any Made Ground, landfill sites and other areas of potentially infilled land both on site and within influencing distance of the site.

Potential Pathways

5.3.3 The following potential pathways have been identified at the site:

- Ingestion of contaminated soils.
- Inhalation of site generated particulates.
- Dermal contact with contaminated materials.
- Ingestion of home grown produce.
- Inhalation of hazardous ground gasses.
- Build-up of hazardous ground gasses in confined spaces.
- Groundwater.
- Surface water courses within influencing of the distance.

Potential Receptors

5.3.4 The following potential receptors have been identified:

- Current site end users.
- Future site end users.
- Construction workers.
- Members of the public and neighbouring site users.
- Neighbouring land.
- Aquifers and drinking water.
- Surface water courses within influencing of the distance.
- Flora and fauna.
- Other ecosystems.

5.4 Preliminary Risk Assessment

- 5.4.1 The Preliminary Risk Assessment has been evaluated using a probability / consequence matrix, which is provided in Appendix E.
- 5.4.2 The proposed development comprises a series of terraced residential properties.
- 5.4.3 The underlying geology of the site and surrounding area is indicated to be Till overlying Manchester Marls Formation / Collyhurst Sandstone Formation, which are of low to medium permeability respectively.
- 5.4.4 The following risk assessment has been based on the above information and the proposed development plan as detailed in Section 2.0.

- 5.4.5 The discussion below assesses the likelihood of potential Contaminants of Concern (CoC's) with a justification on whether they would likely be present.
- 5.4.6 The CSM in Table 5.1 then provides a risk rating for the site.

Land Contamination

- 5.4.7 From the information available, the site itself has had some historical use. It is therefore likely that Made Ground will be present beneath the site associated with past construction and demolition on site and the surrounding neighbourhood, and site generated processes. Therefore, the probability for heavy metals, metalloids and inorganics to be present on or beneath the site is considered to be likely.
- 5.4.8 Historical and contemporary land uses both on the site and within influencing distance likely to produce mobile, organic and leachable contamination includes commercial properties on site, cotton mills, iron works, garages, and paint works. Considering the distances between the features and the site, and the generally variably permeable geology beneath the site, the probability for mobile, organic and leachable contamination to be present at the site is considered to be Low.
- 5.4.9 Historical and contemporary land uses both on the site and within influencing distance likely to produce volatile contamination (VOC's & SVOC's) include: - cotton mills, iron works, garages, and a paint works. Considering the timescales of historical land usage, distances between the features and the site, and the generally variably permeable geology beneath the site, the probability for VOC's & SVOC's to be present at the site is considered to be very low.
- 5.4.10 There are two electric substations within influencing distance of the site which may be a source of Polychlorinated Biphenyls contamination (PCB's). Further details are given below.
- Substation located approximately 56m to the south, first observed on the 1989 map.
 - Substation located approximately 131m to the west, first observed on the 1952 map.
- 5.4.11 One of these predate the 1981 ban on PCB's. However, considering the distances between the features and the site, the topography and anticipated groundwater gradient, along with the variably permeable geology in the area, the probability for PCB contamination at the site is considered to be very low.
- 5.4.12 It is possible that further electric substations or former electric substations are present within influencing distance to the site associated with the surrounding area that have not been identified on the historical maps.
- 5.4.13 Asbestos fibres and Asbestos Containing Materials (ACM's) could be present within any Made Ground and or shallow natural soils beneath the site as a result of historic site uses, and phases of construction and demolition. Therefore, the probability for ACM's to be present at the site is considered to be likely.
- 5.4.14 Therefore, based on the above, the site history, and the environmental information available, the potential contaminants identified on this site may include heavy metals, metalloids and inorganics; leachable, organic and hydrocarbons; and asbestos.

Hazardous Ground Gasses

- 5.4.15 There is one historical landfill site located 234m to the southeast, dated in 1986 for inert and industrial waste, there are four areas of potential infilling located 201m from site. There is a large area of artificial ground noted in BGS mapping located 55m southwest.
- 5.4.16 Therefore, the probability of hazardous gases being present beneath the site is considered to be low, with the risk being low to moderate.
- 5.4.17 Landmark indicates that the site is within a lower probability radon area, as less than 1% of homes are above the action level. Therefore, no radon protection measures are necessary in the construction of new dwellings or extensions.

Plants and Native Grasses

- 5.4.18 Any plants that may be grown at the site in areas of landscaping may potentially be at risk from phytotoxic elements in any artificial soils beneath the site.
- 5.4.19 The site is completely covered by hardstanding / buildings and no significant plant growth was observed on site.
- 5.4.20 Given the historical usage of the site, we consider that there is a likely probability of phytotoxic elements being present on site.

Groundwater

- 5.4.21 The site is underlain by Secondary B Aquifer for the superficial deposits, and Principal Aquifer for the bedrock deposits.
- 5.4.22 There are no source protection zones within 1000m of the site.
- 5.4.23 There is one groundwater abstraction noted 727m to the southwest with fourteen noted between 1000-2000m from site.
- 5.4.24 Based on the above, the underlying variable permeable geology, the proximity of the nearest groundwater abstraction point, the probability for contamination at the site to impact the groundwater, the risk to groundwater is considered to be low.

Surface Water

- 5.4.25 The nearest surface water course is the Ashton Canal located 194m to the northwest, and topographically up gradient of the site. The nearest surface river is the River Medlock, located 204m to the east.
- 5.4.26 There are three pollution incidents, all recorded as category three minor incidents, in 1993-1996 to the canal, with no/ unknown pollutants.
- 5.4.27 There are two licenced surface water abstraction points within 1000m of the site. The nearest to the site is located approximately 653m to the northeast for Tar Distillers, from the Ashton Canal. The second entry is located 658m to the north for an unrecorded abstraction from the Ashton Canal. There are a further six licensed surface water abstraction points between 1000 and 2000m of the site for cooling, dust suppression and unrecorded uses.
- 5.4.28 Based on the above, the underlying variably permeable geology, and the proximity of the nearest surface water feature, the likelihood for contamination at the site to impact surface waters is considered to be unlikely.

Flooding

- 5.4.29 Envirocheck indicates that the site is not located within an area at risk of flooding or within 250m of an area at risk of flooding from rivers or sea.
- 5.4.30 Envirocheck indicates that the site is not located within an area at risk of flooding or within 250m of an area at risk of flooding from surface waters (i.e. pluvial – rainfall, sewers, drains etc.).
- 5.4.31 The site lies within an area that may be affected by flooding from groundwater below ground floor level.

Water Supply / Plastic Pipes

- 5.4.32 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction.

Preliminary Conceptual Site Model

- 5.4.33 From the above information a Preliminary Conceptual Site Model (CSM) has been produced showing the preliminary conceptual model and potential pollutant linkages for the site and is presented overleaf in Table 5.1: Preliminary Conceptual Site Model and Potential Pollutant Linkages.

Table 5.1: Preliminary Conceptual Site Model and Potential Pollutant Linkages

Potential Sources	Contaminants of Concern	Potential Pathway	Potential Receptor	Pollutant Linkage	Probability	Consequence	Risk Classification	Action / Mitigation
Made Ground both on site and within influencing distance of the site Current and former land uses both on site and within influencing distance of the site	Heavy metals, sulphates and inorganics PAH's Asbestos Mobile organic contamination	Inhalation Dermal Contact	Human health: Including current site users.	Considered potentially active	Low	Mild	Low	Site investigation to confirm presence, type and extent of any contamination beneath the site.
	Heavy metals, sulphates and inorganics PAH's Asbestos Mobile organic contamination	Ingestion Inhalation Dermal Contact	Human health: Including future site users.	Considered potentially active	Likely	Medium	Moderate	
	Asbestos Mobile organic contamination	Inhalation	Human health: Including neighbouring residents.	Considered potentially active	Likely	Mild	Low to moderate	
	Heavy metals, sulphates and inorganics PAH's Asbestos Mobile organic contamination	Ingestion Inhalation Dermal Contact	Human health: Including constructions workers	Considered potentially active	Low	Medium	Low to Moderate	
Made Ground on site Current and former land uses on site	Heavy metals, sulphates and inorganics PAH's	Lateral and vertical migration and leaching of contaminants into surface water	Local water courses and associated flora and fauna	Considered potentially active	Unlikely	Medium	Low	Site investigation to confirm presence, type and extent of any contamination beneath the site.

Potential Sources	Contaminants of Concern	Potential Pathway	Potential Receptor	Pollutant Linkage	Probability	Consequence	Risk Classification	Action / Mitigation
	Mobile organic contamination Leachable contamination	bodies via permeable strata and features.						
Made Ground on site Current and former land uses on site	Heavy metals, sulphates and inorganics PAH's Mobile organic contamination Leachable contamination	Lateral and vertical migration and leaching of contaminants into local groundwater	Underlying Aquifer (Drinking water and baseflow to rivers)	Considered potentially active	Low	Medium	Low to moderate	Site investigation to confirm presence, type and extent of any contamination beneath the site.
Made Ground beneath the site Current and former site uses	Phytotoxic elements	Plant uptake	Plants and vegetation	Considered potentially active	Likely	Mild	Low	Site investigation to confirm presence, type and extent of any contamination beneath the site.
Landfill sites Potentially infilled Land (ponds, quarries, reservoirs etc) Made Ground (on and off-site sources)	Hazardous ground gases including CO ₂ , CH ₄ CO, H ₂ S Vapours	Inhalation	Human health animals and plants: Including current site users, future site users, neighbouring residents and constructions workers	Considered potentially active	Low	Medium	Low to Moderate	Site investigation to install gas monitoring wells with subsequent monitoring in accordance with CIRIA 665 is carried out at the site.
		Explosion	Buildings	Considered potentially active	Low	Severe	Moderate	

6.0 PRELIMINARY GEOTECHNICAL ASSESSMENT

6.1 General

- 6.1.1 The underlying shallow geology is likely to consist of Till superficial deposits overlying Manchester Marls, and Collyhurst Sandstone as bedrock deposits, which generally comprise sandy, gravelly, clays and mudstones and sandstones respectively.
- 6.1.2 Made Ground is also anticipated to be present on site.
- 6.1.3 Based upon the information reviewed, a list of potential geotechnical risks has been outlined below in Table 6.1: Potential Geotechnical Risks, which presents a summary of the likely geotechnical risks potentially present at the site.

Table 6.1: Potential Geotechnical Risks

Existing or Potential Features of Concern	Geotechnical Consideration	Geotechnical Risk to Proposed Development	Likelihood
Made Ground	Any potential Made Ground beneath the site.	Made Ground can cause total and differential settlement of any new structures.	Likely – former structures historically present
Trees and vegetation	Large mature trees on site or within close proximity to the site boundaries.	Tree roots have the potential to cause clay soils to shrink causing settlement of new structures.	Negligible - no significant vegetation noted
Shrinkage and expansion of clay soils	Clay soils beneath the site.	Potential for shrinkage and / or heave of clay soils causing damage to new structures.	Possible - Till anticipated
Groundwater ingress	Shallow groundwater beneath the site.	Shallow ground water can have an impact on construction and foundation excavations. Pumping and / or dewatering may be required.	Unlikely – unlikely to be shallow groundwater present
Existing / former foundations and underground structures	New buildings may be situated upon the sites of former demolished buildings or buildings that will be demolished as part of the proposed development.	Uneven founding, inconsistent ground conditions, and unsuitable bearing capacity for new structures.	Likely – former structures historically present
Aggressive ground	Chemical content of the soils beneath the site.	Chemically aggressive ground may have the potential to attack buried concrete.	Possible – Made Ground present
Soft / loose / weak soils and / or rock beneath the site	Unsuitable founding strata beneath the site.	Soft and loose soils or weak rock may be inadequate to found on. A suitable foundation option should be selected based on the actual ground conditions beneath the site.	Unlikely – Till and mudstone / sandstone bedrock anticipated
Embankments	Unstable slopes and embankments.	Collapse onto or into any new developments	Negligible – none present
Shallow mine workings beneath the site	Coal seams or mine entries present on or beneath the site which may have been worked in the past. Non coal related mining.	Worked mine seams or areas of mineral extraction leave voids underground that have the potential to settle when new loads are placed above them.	Unlikely – near surface geology not coal bearing, and coal depths last worked in 1961 from 340m to 1110m depth, no mine entries noted in the vicinity. Not affected by open cast works.

Existing or Potential Features of Concern	Geotechnical Consideration	Geotechnical Risk to Proposed Development	Likelihood
Ground Dissolution	Dissolution of carbonaceous geology beneath the site.	Carbonaceous ground beneath the site can dissolve over time with groundwater percolating through causing sink holes giving rise to settlement or complete collapse of structures.	Negligible – no carbonaceous geology present
Brine Extraction	Areas of brine extraction beneath the site at shallow depths.	Affected areas may leave voids underground that have the potential to settle when new loads are placed above them.	Negligible – no saliferous geology present

6.2 Discussion

Structures

- 6.2.1 The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development.
- 6.2.2 A suitable geotechnical site investigation should be carried out at the site to confirm ground conditions, geotechnical parameters, details of the groundwater regime, and other general site details to facilitate suitable foundation and substructure design.

Sustainable Drainage

- 6.2.3 In accordance with National Planning and Policy Framework (NPPF) and Local Planning Guidance, the Local Planning Authority (LPA) will require that surface water drainage from the proposed development complies with current design practices for Sustainable Drainage Systems (SuDS) construction of separate drainage systems for foul and surface water. Surface water shall be required to be attenuated to Greenfield runoff rates or better and attenuation up to the 1 in 100 year storm event plus 40% for climate change will be required on site.
- 6.2.4 Based on the indicative ground conditions encountered it may be possible that soak away based sustainable drainage would be suitable at the site, however the presence and thickness (if present) of any cohesive ground at the site may result in sustainable drainage not being practical or feasible. If soakaways are to be considered, it is recommended that soak-away testing is carried out in accordance with BRE 365 at the site to establish the sites suitability for sustainable drainage.
- 6.2.5 It should be noted that on this particular site, the current proposed plans as per Section 2, provide minimal space for soak ways to be sited as per BRE 365, which states that soak ways should not normally be constructed within 5m of a structure. Therefore the design of the development may restrict the use of soak ways as a method of stormwater disposal, should this be the case, then it is envisaged that connection to the current draining network would be the preferred option, given the appropriate license and permit requirements.

7.0 CONCLUSIONS AND RECOMMENDATIONS

7.1 Conclusions

Environmental

- 7.1.1 A review of the preliminary information reveals that future end users of the site are potentially at moderate risk of being affected by contamination in soils and / or groundwater beneath this site.
- 7.1.2 Risks to neighbouring residents from the site are considered to be low to moderate at this stage.
- 7.1.3 Risks to construction workers from the site are considered to be low to moderate at this stage.
- 7.1.4 The risks of hazardous ground gasses affecting the site are considered to be low to moderate at this stage.
- 7.1.5 No radon protection measures are necessary in the construction of new dwellings or extensions.
- 7.1.6 The risks to surface waters are considered to be low at this stage.
- 7.1.7 The risks to drinking water and groundwater are considered to be low to moderate at this stage.
- 7.1.8 Risks to plants and native grasses are considered to be low at this stage.

Geotechnical

- 7.1.9 The nature and distribution of geotechnical properties of the near surface strata have not been fully identified within this study, therefore it is not possible at this stage, to give meaningful advice as to the type, nature, and construction of any foundations for the proposed development.
- 7.1.10 Inadequately designed buried concrete may be at risk from potentially elevated sulphates and low pH in the soils and groundwater beneath the site.
- 7.1.11 The site is not considered to be affected shallow coal mining. Therefore, risks from shallow coal mining are considered to be unlikely at this stage.
- 7.1.12 The site is not considered to be affected by brine extraction. Therefore, risks from brine extraction are considered to be negligible at this stage.
- 7.1.13 Based on the indicative ground conditions encountered it is possible that sustainable drainage would be suitable at the site, however the presence and thickness (if present) of Made Ground at the site may result in sustainable drainage not being practical or feasible.

7.2 Recommendations

- 7.2.1 It is recommended that a suitable combined phase II environmental and geotechnical site investigation is carried out at the site to establish the presence of any contamination at the site, and to identify the ground conditions and provide details of their engineering properties in order to facilitate foundation design for the proposed development.
- 7.2.2 A recommended scope of works for the intrusive site investigation would be as follows:
 - Windowless sample boreholes across the site to a nominal depth of up to 5.00mbgl or refusal to facilitate environmental and geotechnical sampling; and to facilitate the installation of gas and groundwater monitoring wells.
 - Full supervision of all works by engineering geologist including sampling and detailed geotechnical descriptions to BS5930, EN ISO 14688-1 EN ISO 14688-2 and EN ISO 14689 of all strata types encountered within the exploratory holes.
 - The installation of three combined gas and groundwater monitoring standpipes.
 - Subsequent gas monitoring in accordance with CIRIA 665 on six occasions over a three month period.

- Subsequent groundwater monitoring, with groundwater sampling on at least one occasion
- A suitable suite of chemical testing, for determinants identified within the Preliminary Conceptual Model.
- A suitable suite of geotechnical testing.
- Provision of interpretative report to undertake a Generic Quantitative Risk Assessment (GQRA) and to provide details of the engineering properties of the underlying soils and rocks encountered with subsequent recommendations on suitable foundation solutions.

7.2.3 It is recommended that the above conclusions and recommendations are agreed in principle with the Local Planning Authority (LPA) to gain their approval prior to commencement of the development to avoid unnecessary complications or delays at a later stage.

7.3 Other Considerations

Soakaways

- 7.3.1 In accordance with National Planning and Policy Framework (NPPF) and Local Planning Guidance, the LPA will require that surface water drainage from the proposed development complies with current design practices for Sustainable Drainage Systems (SuDS) construction of separate drainage systems for foul and surface water.
- 7.3.2 Soakaway Testing should be considered to determine the suitability for soakaway based sustainable drainage at the site.

Plastic Water Pipes

- 7.3.3 Any organic contamination present in the soils or groundwater beneath the site would pose a risk of premature failure to below ground services via chemical reaction.
- 7.3.4 Any subsequent Phase II Site Investigation would be primarily concerned with human health risk assessment.
- 7.3.5 Considerations should be given to sampling and chemical analysis of the materials that any plastic water supply pipes will be laid in.
- 7.3.6 It is also likely that the water utilities provider will require their own risk assessment to be completed.

Radon

- 7.3.7 Radon protection measures are not required at this site.

Invasive plants

- 7.3.8 Invasive Plants may be present at the site, although none were identified during the walkover survey GeoCon are not horticultural specialists, and it is recommended that suitably qualified and experienced specialists in invasive species are commissioned to undertake an appropriate survey of the site.

Asbestos Survey

- 7.3.9 Any existing buildings and structures on site will require an Asbestos Survey by a competent asbestos contractor.

Flood Risk

- 7.3.10 Consideration should be given to commissioning a Flood Risk Assessment if required by the Local Authority.

Unexploded Ordnance

- 7.3.11 Due to the central city location of the site, it is also recommended that consideration is given to a UXO assessment being carried out at the site. This may include either a basic UXO report or detailed UXO

report in the first instance. Any subsequent intrusive works may then require on-site UXO clearance subject to the findings of the initial UXO report.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Site of Special Scientific Interest, National Nature Reserve, Ramsar, Special Protection Area, Special Conservation Area, Marine Nature Reserve data (derived from Ordnance Survey 1:10000 raster) is provided by, and used with the permission of, Natural England who retain the copyright and Intellectual Property Rights for the data.

Scottish Natural Heritage Copyright

Contains SNH information licensed under the Open Government Licence v3.0.

Ove Arup Copyright Notice

The Mining Instability data was obtained on licence from Ove Arup & Partners Limited (for further information, contact mining.review@arup.com). No reproduction or further use of such Data is to be made without the prior written consent of Ove Arup & Partners Limited. The supplied Mining Instability data is derived from publicly available records and other third party sources and neither Ove Arup & Partners nor Landmark warrant the accuracy or completeness of such information or data.

Stantec Copyright Notice

The cavity data presented has been extracted from the PBA (now Stantec UK Ltd) enhanced version of the original DEFRA national cavity databases. Stantec UK Ltd retain the copyright & intellectual property rights in the data. Whilst all reasonable efforts are made to check that the information contained in the cavity databases is accurate we do not warrant that the data is complete or error free. The information is based upon our own researches and those collated from a number of external sources and is continually being augmented and updated by Stantec UK Ltd. In no event shall Stantec UK Ltd or Landmark be liable for any loss or damage including, without limitation, indirect or consequential loss or damage arising from the use of this data.

Radon Potential dataset Copyright Notice

Information supplied from a joint dataset compiled by The British Geological Survey and Public Health England.

Natural Resources Wales Copyright Notice

Report Version v53.0

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Agency & Hydrological					
BGS Groundwater Flooding Susceptibility	pg 1	Yes	Yes	Yes	n/a
Contaminated Land Register Entries and Notices					
Discharge Consents	pg 4		1	23	29
Prosecutions Relating to Controlled Waters			n/a	n/a	n/a
Enforcement and Prohibition Notices					
Integrated Pollution Controls					
Integrated Pollution Prevention And Control					
Local Authority Integrated Pollution Prevention And Control					
Local Authority Pollution Prevention and Controls	pg 17		1	1	26
Local Authority Pollution Prevention and Control Enforcements	pg 21				2
Nearest Surface Water Feature	pg 21		Yes		
Pollution Incidents to Controlled Waters	pg 21		3	4	18
Prosecutions Relating to Authorised Processes					
Registered Radioactive Substances	pg 25				1
River Quality	pg 25		1	1	3
River Quality Biology Sampling Points					
River Quality Chemistry Sampling Points	pg 27			1	
Substantiated Pollution Incident Register	pg 27			1	1
Water Abstractions	pg 28				3 (*20)
Water Industry Act Referrals					
Groundwater Vulnerability Map	pg 33	Yes	n/a	n/a	n/a
Groundwater Vulnerability - Soluble Rock Risk	pg 34	1	n/a	n/a	n/a
Groundwater Vulnerability - Local Information			n/a	n/a	n/a
Bedrock Aquifer Designations	pg 34	Yes	n/a	n/a	n/a
Superficial Aquifer Designations	pg 34	Yes	n/a	n/a	n/a
Source Protection Zones					
Extreme Flooding from Rivers or Sea without Defences	pg 34		Yes	n/a	n/a
Flooding from Rivers or Sea without Defences	pg 34		Yes	n/a	n/a
Areas Benefiting from Flood Defences				n/a	n/a
Flood Water Storage Areas				n/a	n/a
Flood Defences				n/a	n/a
OS Water Network Lines	pg 34		6	12	29

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Waste					
BGS Recorded Landfill Sites					
Historical Landfill Sites	pg 40		1		2
Integrated Pollution Control Registered Waste Sites					
Licensed Waste Management Facilities (Landfill Boundaries)					
Licensed Waste Management Facilities (Locations)	pg 40				14
Local Authority Landfill Coverage	pg 43	1	n/a	n/a	n/a
Local Authority Recorded Landfill Sites					
Potentially Infilled Land (Non-Water)	pg 43			3	13
Potentially Infilled Land (Water)	pg 44		3	6	39
Registered Landfill Sites	pg 47			1	
Registered Waste Transfer Sites	pg 47				4
Registered Waste Treatment or Disposal Sites	pg 49				5
Hazardous Substances					
Control of Major Accident Hazards Sites (COMAH)	pg 51				1
Explosive Sites					
Notification of Installations Handling Hazardous Substances (NIHHS)					
Planning Hazardous Substance Consents	pg 51				1
Planning Hazardous Substance Enforcements					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Geological					
BGS 1:625,000 Solid Geology	pg 52	Yes	n/a	n/a	n/a
BGS Estimated Soil Chemistry	pg 52	Yes	Yes	Yes	Yes
BGS Recorded Mineral Sites	pg 55			3	12
BGS Urban Soil Chemistry	pg 57		Yes	Yes	Yes
BGS Urban Soil Chemistry Averages	pg 60	Yes			
CBSCB Compensation District			n/a	n/a	n/a
Coal Mining Affected Areas	pg 60	Yes	n/a	n/a	n/a
Mining Instability	pg 60	Yes	n/a	n/a	n/a
Man-Made Mining Cavities					
Natural Cavities					
Non Coal Mining Areas of Great Britain	pg 60		Yes	n/a	n/a
Potential for Collapsible Ground Stability Hazards	pg 60	Yes		n/a	n/a
Potential for Compressible Ground Stability Hazards	pg 60		Yes	n/a	n/a
Potential for Ground Dissolution Stability Hazards				n/a	n/a
Potential for Landslide Ground Stability Hazards	pg 61	Yes	Yes	n/a	n/a
Potential for Running Sand Ground Stability Hazards	pg 61	Yes	Yes	n/a	n/a
Potential for Shrinking or Swelling Clay Ground Stability Hazards	pg 61	Yes		n/a	n/a
Radon Potential - Radon Affected Areas			n/a	n/a	n/a
Radon Potential - Radon Protection Measures			n/a	n/a	n/a
Industrial Land Use					
Contemporary Trade Directory Entries	pg 62		13	51	410
Fuel Station Entries	pg 102				3
Points of Interest - Commercial Services	pg 102			13	83
Points of Interest - Education and Health	pg 110				1
Points of Interest - Manufacturing and Production	pg 110		10	26	131
Points of Interest - Public Infrastructure	pg 124		2	1	22
Points of Interest - Recreational and Environmental	pg 126			2	14
Gas Pipelines					
Underground Electrical Cables					

Data Type	Page Number	On Site	0 to 250m	251 to 500m	501 to 1000m (*up to 2000m)
Sensitive Land Use					
Ancient Woodland					
Areas of Adopted Green Belt					
Areas of Unadopted Green Belt					
Areas of Outstanding Natural Beauty					
Environmentally Sensitive Areas					
Forest Parks					
Local Nature Reserves					
Marine Nature Reserves					
National Nature Reserves					
National Parks					
Nitrate Sensitive Areas					
Nitrate Vulnerable Zones	pg 129				1
Ramsar Sites					
Sites of Special Scientific Interest					
Special Areas of Conservation					
Special Protection Areas					
World Heritage Sites

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice

Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment

A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant

A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Envirocheck reports are compiled from 136 different sources of data.

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940's, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use. They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

10k Raster Mapping

Published 1999

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey's 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2021

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities), 1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Lancashire And Furness

Published 1851

Source map scale - 1:1,056

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1891

Source map scale - 1:500

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to complement the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a 'work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Ordinance Survey Plan
Published 1988 - 1989
Source map scale - 1:1,250

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840's. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Large-Scale National Grid Data

Published 1992

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.

The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

APPENDIX D
COAL AUTHORITY MINING REPORT

The Coal
Authority

CON29M

coal mining report

LAND AT, SNELL STREET, MANCHESTER, LANCASHIRE, M4 7EL

Known or potential coal mining risks

Past underground coal mining	Page 3
Future underground coal mining	Page 3
Withdrawal of support	Page 5

Further action

No further reports from the Coal Authority are required. Further information on any next steps can be found in our Professional opinion.

For more information on our reports please visit
www.groundstability.com

Professional opinion

According to the official mining information records held by the Coal Authority at the time of this search, evidence of, or the potential for, coal mining related features have been identified. It is unlikely that these features will impact on the stability of the enquiry boundary.

Detailed findings

Information provided by the Coal Authority in this report is compiled in response to the Law Society's CON29M Coal Mining enquiries. The said enquiries are protected by copyright owned by the Law Society of 113 Chancery Lane, London WC2A 1PL.

The Coal Authority owns the copyright in this report and the information used to produce this report is protected by our database rights. All rights are reserved and unauthorised use is prohibited. If we provide a report for you, this does not mean that copyright and any other rights will pass to you. However, you can use the report for your own purposes.

1 Past underground coal mining

The property is in a surface area that could be affected by underground mining in 4 seams of coal at 340m to 1,110m depth, and last worked in 1961.

Any movement in the ground due to coal mining activity associated with these workings should have stopped by now.

2 Present underground coal mining

The property is not within a surface area that could be affected by present underground mining.

3 Future underground coal mining

The property is not in an area where the Coal Authority has received an application for, and is currently considering whether to grant a licence to remove or work coal by underground methods.

The property is not in an area where a licence has been granted to remove or otherwise work coal using underground methods.

The property is not in an area likely to be affected from any planned future underground coal mining.

However, reserves of coal exist in the local area which could be worked at some time in the future.

No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

4 Mine entries

There are no recorded coal mine entries known to the Coal Authority within, or within 20 metres, of the boundary of the property.

5 Coal mining geology

The Coal Authority is not aware of any damage due to geological faults or other lines of weakness that have been affected by coal mining.

6 Past opencast coal mining

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

7 Present opencast coal mining

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

8 Future opencast coal mining

There are no licence requests outstanding to remove coal by opencast methods within 800 metres of the boundary.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

9 Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

10 Mine gas

The Coal Authority has no record of a mine gas emission requiring action.

11 Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Coal Authority, under its Emergency Surface Hazard Call Out procedures.

12 Withdrawal of support

The property is in an area where a notice to withdraw support was given in 1955.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

13 Working facilities order

The property is not in an area where an order has been made, under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

14 Payments to owners of former copyhold land

The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Statutory cover

Coal mining subsidence

In the unlikely event of any coal mining related subsidence damage, the Coal Authority or the mine operator has a duty to take remedial action in respect of subsidence caused by the withdrawal of support from land or property in connection with lawful coal mining operations.

When the works are the responsibility of the Coal Authority, our dedicated public safety and subsidence team will manage the claim. The house or land owner ("the owner") is covered for these works under the terms of the Coal Mining Subsidence Act 1991 (as amended by the Coal Industry Act 1994). Please note, this Act does not apply where coal was worked or gotten by virtue of the grant of a gale in the Forest of Dean, or any other part of the Hundred of St. Briavels in the county of Gloucester.

If you believe your land or property is suffering from coal mining subsidence damage and you need more information on what to do next, please use the following link to our website which sets out what your rights are and what you need to consider before making a claim.

www.gov.uk/government/publications/coal-mining-subsidence-damage-notice-form

Coal mining hazards

Our public safety and subsidence team provide a 24 hour a day, 7 days a week hazard reporting service, to help protect the public from hazards caused by past coal workings, such as a mine shaft or shallow working collapse. To report any hazards please call **01623 646 333**. Further information can be found on our website: www.gov.uk/coalauthority.

Glossary

Key terms

adit - horizontal or sloped entrance to a mine

coal mining subsidence - ground movement caused by the removal of coal by underground mining

Coal Mining Subsidence Act 1991 - the Act setting out the duties of the Coal Authority to repair damage caused by coal mining subsidence

coal mining subsidence damage - damage to land, buildings or structures caused by the removal of coal by underground mining

coal seams - bed of coal of varying thickness

future opencast coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal from the surface

future underground coal mining - a licence granted, or licence application received, by the Coal Authority to excavate coal underground. Although it is unlikely, remaining coal reserves could create a possibility for future mining, which would be licensed by the Coal Authority

mine entries - collective name for shafts and adits

payments to owners of former copyhold land - historically, copyhold land gave rights to coal to the copyholder. Legislation was set up to allow others to work this coal, but they had to issue a notice and pay compensation if a copyholder came forward

shaft - vertical entry into a mine

site investigation - investigations of coal mining risks carried out with the Coal Authority's permission

stop notice - a delay to repairs because further coal mining subsidence damage may occur and it would be unwise to carry out permanent repairs

subsidence claim - a formal notice of subsidence damage to the Coal Authority since it was established on 31 October 1994

withdrawal of support - a historic notice informing landowners that the coal beneath their property was going to be worked

working facilities orders - a court order which gave permission, restricted or prevented coal mine workings

APPENDIX E

RISK ASSESSMENT MATRIX

Preliminary Risk Assessment Methodology (After NHBC Guidance for the Safe Development of Housing on Land Affected by Contamination (2008))

NHBC Guidance for the Safe Development of Housing on Land Affected by Contamination (2008) sets out a methodology for the estimation of risk.

At Phase I the risk estimation will take the form of a qualitative risk assessment, which will be entirely based on the conceptual model for each potential end-use of the site. Comments on level of uncertainty will also need to be included for each source-pathway-target linkage to allow the confidence in the assessed risks to be understood. The results of the qualitative risk assessment will allow the risk evaluation to be concisely described in the following chapters.

The methodology for risk evaluation is a qualitative method for interpreting the output for the risk estimation stage of the assessment. It involves the classification of the:

The magnitude of probability (i.e. likelihood).

[takes into account both the presence of the hazard and receptor and the integrity of the pathway]

The magnitude of the potential consequence (i.e. severity).

[takes into account both the potential severity of the hazard and the sensitivity of the receptor]

Classification of Probability

Classification	Definition	Examples
High likelihood (Hi)	There is a pollutant linkage and an event that either appears very likely in the short term and almost inevitable in the long term, or there is evidence at the receptor or harm or pollution.	<i>Elevated concentrations of toxic contaminants are present in soils in the top 0.5m in a residential garden.</i> <i>Ground/groundwater contamination could be present from chemical works, containing a number of USTs, having been in operation on the same site for over 50 years</i>
Likely (Li)	There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.	<i>Elevated concentrations of toxic contaminants are present in soils at depths of 0.5-1.0m in a residential garden, or the top 0.5m in public open space.</i> <i>Ground/groundwater contamination could be present from an industrial site containing a UST present between 1970 and 1990. The tank is known to be single skin. There is no evidence of leakage although there are no records of integrity tests.</i>
Low likelihood (Lw)	There is a pollutant linkage and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term.	<i>Elevated concentrations of toxic contaminants are present in soils at depths >1m in a residential garden, or 0.5-1.0m in public open space.</i> <i>Ground/groundwater contamination could be present on a light industrial unit constructed in the 1990s containing a UST in operation over the last 10 years – the tank is double skinned but there is no integrity testing or evidence of leakage.</i>
Unlikely (UI)	There is a pollutant linkage but circumstances are such that it is improbable that an event would occur even in the very long term.	<i>Elevated concentrations of toxic contaminants are present below hardstanding.</i> <i>Light industrial unit <10 yrs old containing a double skinned UST with annual integrity testing results available.</i>

Preliminary Risk Assessment Methodology (After NHBC Guidance for the Safe Development of Housing on Land Affected by Contamination (2008))

Classification of Consequence

	Definition	Examples
Severe (Sv)	Highly elevated concentrations likely to result in “significant harm” to human health as defined by the EPA 1990, Part 2A, if exposure occurs. A Category 1: Human Health risk is present. Equivalent to EA Category 1 pollution incident including persistent and/or extensive effects on water quality; leading to closure of a potable abstraction point major impact on amenity value or major damage to agriculture or commerce. Major damage to aquatic or other ecosystems, which is likely to result in a substantial adverse change in its functioning or harm to a species of special interest that endangers the long - term maintenance of the population. Catastrophic damage to crops, buildings or property.	<i>Significant harm to humans is defined in circular 01/2006 as death, disease*, serious injury, genetic mutation, birth defects or the impairment of reproductive functions.</i> <i>Major fish kill in surface water from large spillage of contaminants from site.</i> <i>Highly elevated concentrations of List 1 and substances present in groundwater close to small potable abstraction (high sensitivity).</i> <i>Explosion, causing building collapse (can also equate to immediate human health risk if buildings are occupied).</i>
Medium (Md)	Elevated concentrations which could result in “significant harm” to human health as defined by the EPA 1990, Part 2A if exposure occurs. A Category 2: Human Health risk is present. Equivalent to EA Category 2 pollution incident including significant effect on water quality; notification required to abstractors; reduction in amenity value or significant damage to agriculture or commerce. Significant damage to aquatic or other ecosystems, which may result in a substantial adverse change in its functioning or harm to a species of special interest that may endanger the long-term maintenance of the population. Significant damage to crops, buildings or property.	<i>Significant harm to humans is defined in circular 01/2006 as death, disease* serious injury, genetic mutation, birth defects or the impairment of reproductive functions.</i> <i>Damage to building rendering it unsafe to occupy e.g. foundation damage resulting in instability.</i> <i>Ingress of contaminants through plastic potable water pipes.</i>
Mild (MI)	Exposure to human health unlikely to lead to “significant harm”. A Category 3 Human Health risk is present. Equivalent to EA Category 3 pollution incident including minimal or short lived effect on water quality; marginal effect on amenity value, agriculture or commerce Minor or short lived damage to aquatic or other ecosystems, which is unlikely to result in a substantial adverse change in its functioning or harm to a species of special interest that would endanger the long-term maintenance of the population Minor damage to crops, buildings or property.	<i>Exposure could lead to slight short - term effects (e.g. mild skin rash).</i> <i>Surface spalling of concrete.</i>
Minor (Mr)	No measurable effect on humans. A Category 4: Human Health risk is present. Equivalent to insubstantial pollution incident with no observed effect on water quality or ecosystems. Repairable effects of damage to buildings, structures and services.	<i>The presence of contaminants at such concentrations that protective equipment is required during site works.</i> <i>The loss of plants in a landscaping scheme.</i> <i>Discolouration of concrete.</i>

* For these purposes, disease is to be taken to mean an unhealthy condition of the body or a part of it and can include, for example, cancer, liver dysfunction or extensive skin ailments. Mental dysfunction is included only insofar as it is attributable to the effects of a pollutant on the body of the person concerned.

The classification of consequence does not take into account the probability of the consequence being realized. Therefore, there may be more than one consequence for a particular pollutant linkage. Both a severe and medium classification can result in death. Severe relates to short term (acute) risk while medium relates to long

Preliminary Risk Assessment Methodology (After NHBC Guidance for the Safe Development of Housing on Land Affected by Contamination (2008))

term (chronic) risk. Mild relates to significant harm but to less sensitive receptors. Minor classification relates to harm which is not significant but could have a financial cost.

The classification gives a guide as to the severity and consequence of identified risk when compared with other risk presented on the site. It should be noted that if a risk is identified it cannot be classified as “no risk” but as “very low risk”. Differing stakeholders may have a different view on the acceptability of a risk.

Risk Evaluation Matrix

		Consequence			
		Severe (Sv)	Medium (Md)	Mild (Mi)	Minor (Mr)
Probability	High likelihood (Hi)	Very high risk (VH)	High Risk (H)	Moderate Risk (M)	Mod/low risk (M/L)
	Likely (Li)	High risk (H)	Moderate risk (M)	Mod/low risk (M/L)	Low risk (L)
	Low likelihood (Lw)	Moderate risk (M)	Mod/low risk (M/L)	Low risk (L)	Very low risk (VL)
	Unlikely (UI)	Mod/low risk (M/L)	Low risk (L)	Very low risk (VL)	Very low risk (VL)

Risk Categorizations

Very high risk (VH)	There is a high probability that severe harm could arise to a designated receptor from an identified hazard, OR, there is evidence that severe harm to a designated receptor is currently happening. This risk, if realized, is likely to result in a substantial liability. Urgent investigation (if not undertaken already) and remediation are likely to be required.
High risk (H)	Harm is likely to arise to a designated receptor from an identified hazard. Realization of the risk is likely to present a substantial liability. Urgent investigation (if not undertaken already) is required and remedial works may be necessary in the short-term and are likely over the longer-term.
Moderate risk (M)	It is possible that harm could arise to a designated receptor from an identified hazard. However, it is either relatively unlikely that any such harm would be severe, or if any harm were to occur it is more likely that the harm would be relatively mild. Investigation (if not already undertaken) is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer-term.
Low risk (L)	It is possible that harm could arise to a designated receptor from an identified hazard, but it is likely that this harm, if realized, would at worst normally be mild.
Very low risk (VL)	There is a low possibility that harm could arise to a receptor. In the event of such harm being realized it is not likely to be severe.
