

Environmental Constraints Map

General Control Measures

- All plant to carry spill kits.
- Freestanding plant to have drop trays.
- Concrete washout in to designated skip only.
- No protected species recorded on site.
- Daily inspection of River Irwell to be undertaken to check for silt/pollutants.
- Effluent from site welfare to be taken from site by licensed waste carrier, no connection to foul water network to be made.
- Roads/haul roads to be damped down in dry weather to prevent airborne dust.
- Wheelwashing facilities to be provided and road sweeping to take place ensure the local road network is kept clean and free of debris.

Existing outfall to River Irwell located under Chapel Street bridge. There are existing surface water gullies on Victoria Street connected directly to this outfall. Green Rhino® EnviroHorn drain sediment filters are to be installed in the gully pots during the works to prevent sediment and contaminants from the site potentially entering the River Irwell.

Deliveries out
(one way system)

Wheelwashing
facilities

Concrete
washout facilities

Tree protection fencing to be placed around the tree to be retained. Refer to Arboricultural Constraints Report for information.
