

Proposed works to trees in the garden of 16 West Meade

Proposed Works

The following works are proposed to the branches belonging to trees in the garden of 16 West Meade which hang over the fence into our garden.

- **Copper Beech:** We would like permission to prune branches of the the tree which are hanging over our side of the fence to allow light to get to our garden.
- **Laburnum:** We would like permission to remove the branches of the tree which are on our side of the fence to allow light to get to our garden and reduce risk of poisonous seed pods falling on our side of the fence.

Sketch Plan

16 WEST MEADE

Copper Beech: Expansive tree which is damaging the fence and blocking light the majority of the year.

Holly Bush: Significant growth year on year.

Laburnum Tree: We want to remove any branches which are on our side of the fence. We have huge concerns over the poisonous nature of this tree with having young children. It also takes all the light from our garden at the end of the day when we would be getting home from work.

T2
Est. 35ft

Boundary Fence: Damaged as the large copper beech tree, the laburnum and the holly bush are growing and causing extensive bowing of fence and several concrete posts. This is a health and safety risk especially with young children and has encroached our boundary.
