## Executive Summary

|                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|---------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Appointment         | <p>In February 2020 Curtins were instructed by Packaged Living Ltd. to undertake a Phase 1 Preliminary Risk Assessment of a site of land at Heyrod Street, Piccadilly East, Manchester, M1 2WW. The site is centred on NGR SJ852980 and covers an area of approximately 0.22Ha.</p> <p>The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site in support of an anticipated planning application. The intended development comprises 253 residential units and extends to 24 storeys plus ground with associated amenities, along with ground floor retail units and parking space.</p>                                                                                                                                                                                                                                                                                                                                                                                    |
| Current Site Status | <p>The south west of the site is occupied by a warehouse structure, while the north east is occupied by carparking and outdoor storage. The site is relatively flat, with a maximum approximate elevation of 47m AoD in the north east and a minimum of 45m AoD in the south west. There is an area of raised carparking in the south east of the site.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| Site History        | <p>The earliest mapping (1848) shows that the majority of the site was occupied by terraced housing, with 1 RUWRQ 6 WUHHW Draining through the site. The eastern edge of the site boundary included D SRUWLRQ RI DQ DGMDFHQW WLPEHV Q D O X G H C D Q LWUHQV IRXUC west and three cotton mills within 75m.</p> <p>1891 mapping shows that the on-site timber yard structures had been demolished by that time. No major changes occurred on-site prior to 1933 mapping, which shows that some of the housing in the south eastern portion of the site had been demolished.</p> <p>The remaining residential structures were demolished prior to 1978. Mapping from this period shows a 3: R U N V ' V W U X F W X U H Z D V S U H V H V R W W K G M D F W G W H W E R N W G S D U L W H currently present on site had been constructed by 1981, with an extension being constructed by 1991. The D G M D F H Q W 3: R U N V ' V W U X F W X U H Z D V 1 G R I X U R V K H U I P D D Q J H G D R F I X 1991 and the present.</p> |
| Geology             | <p>While Made Ground is not indicated to be present on BGS mapping, the V L W H V K L V W R U \ V X is potential for localised Made Ground deposits to be present.</p> <p>Published mapping indicates the site is underlain by Till (superficial) followed by Chester Formation Sandstone (bedrock). Near-site borehole logs indicate that superficial deposits beneath the site vary in thickness, with one borehole record (115m south of the site) indicating a thickness of 7.93m while another (60m east) indicates a thickness of 15.83m. The bedrock was encountered in these boreholes at depths of 10.06m bgl. and 17.83m bgl. respectively.</p> <p>The site is situated in a coal mining reporting area; however, it is not within a development high risk area. The closest mine entries are approximately 800m north east of the site. Coal outcrops and probable shallow workings are mapped 1.2km north east.</p>                                                                                                 |
| Hydrogeology        | <p>The superficial Till deposits underlying the site are designated as a Secondary Undifferentiated Aquifer, while the Chester Formation Sandstone is designated as a principal aquifer.</p> <p>The site is not located within a Source Protection Zone (SPZ). The closest groundwater abstraction point is located 461m south of the site for the purpos H R I 3 5 X E E H U * H Q H U D O &amp; The Ordnance Survey map shows no other abstraction points within 1km of the site boundary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| Hydrology           | <p>The nearest surface water feature is the Ashton Canal 77m north of the site. No pollution incidents have been recorded within 500m of the site in the past 20 years. There are three discharge consents within 500m of the site, relating to storm sewage overflow.</p> <p>There are no active surface water abstraction points located within 500m of the site boundary.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| UXO                 | <p>RLVN 0DSSLQJ IRU 8;2 V KDV SODFHG WDA Analysis with Historical Bomb Mapping V from the University of Manchester shows the area surrounding the site has two strikes within 250m, one fire-bomb 250m north and one high explosive bomb 250m south west. Post-war historical mapping includes D 3 5 X L Q ' d B O U L H east of the site, potentially indicating a structure destroyed by bombing.</p> <p>Given the demolition of all structures post-war and redevelopment of the site, the risk of encountering potential UXO as part of future intrusive works is considered to be Moderate with respect to intrusive investigations and therefore it is recommended that Detailed UXO Risk Assessment report be acquired for the site prior to beginning any intrusive works.</p>                                                                                                                                                                                                                                          |

|                                         |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Initial Ground Contamination Assessment | <p>The chronic health risk posed to site end users and construction worker by on site sources of contamination via direct contact, ingestion, inhalation is assessed as Moderate/Low given that contamination is only expected to be present in a localised capacity. The risk of pollution of groundwater and surface waters by on site sources of contamination via vertical/horizontal migration through site soils is assessed as Moderate/Low and Very Low respectively due to reduced risk of migration through the Till and distance to the nearest water feature.</p> <p>The chronic health risk posed to site end users by on and offsite soils with the potential to generate ground gases via vertical and horizontal migration through the underlying deposits is assessed as Moderate due to the infilled historical water features within 250m and the historical landfill within 500m.</p> |
| Recommendations                         | <p>In summary the following recommendations are made;</p> <ul style="list-style-type: none"><li>x Obtain a Detailed Unexploded Ordnance (UXO) Risk Assessment report for the site prior to any intrusive works taking place;</li><li>x Undertake an intrusive ground investigation;</li><li>x Undertake a GQRA as part of the ground investigation; and</li><li>x Undertake Ground Gas monitoring.</li></ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |

Appendix D ±Qualitative Risk Assessment Rationale

## 1.0 Introduction

### 1.1 Project Background

In February 2020 Curtins were instructed by Packaged Living Ltd. to undertake a Phase 1 Preliminary Risk Assessment for a site of land at Heyrod Street, Piccadilly East, Manchester, M1 2WW. The site is centred on NGR SJ852980 and covers an area of approximately 0.22 Ha.

### 1.2 Scope of Services

The Phase 1 is intended to provide an overview of the geo-environmental and geotechnical setting of the site prior and in support of an anticipated planning application.

The intended development comprises a 352 residential units and extends to 24 storeys plus ground with associated amenities, ground floor retail units and parking space.

Through this overview the Phase 1 aims to develop both a working conceptual and ground model for the site, as well as present an initial assessment of any risks that could be presented to the development including its intended end users and the wider environment.

Specifically, the Phase 1 provides an initial assessment of the site with regard to:

- a) Potential contamination of the site strata by historical and or current use;
- b) The potential impact on the wider environment by historical and or current use of the site of interest;
- c) The potential impact from surrounding land uses and other environmental factors;
- d) Potential problems associated with geological features such as faulting, mineral extraction, mining and land instability;
- e) The location of apparent sub-surface structures and obstructions that may affect the proposed redevelopment; and
- f) The location of above-surface features that may affect the proposed redevelopment.

Consideration of detailed flood risk, ecology and archaeological issues are outside of the scope of this report

## 2.0 Current Site and Surrounding Area Details

### 2.1 Site Location and Current Details

A site description is in Table 2.1 and a site location plan is shown in Figure 2.1 below. A site walkover was undertaken by Curtins on 20<sup>th</sup> February 2020 and photographs are included in Appendix C.

Table 2.1 ±Site Details

| Area of Site                     | Approximately 0.22 Ha                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| Current Site Use and Description | <p>The south western part of the site is currently occupied by a warehouse structure, while the remainder of the site is occupied by areas of car parking and outdoor storage.</p> <p>The site is accessed from Heyrod Street to the south east.</p> <p>The site generally slopes slightly, with a maximum approximate elevation of 47m AOD in the north east and a minimum of 45m AOD in the south west. There is an area of raised carparking on the south eastern edge of the site.</p> |

## 2.2 Surrounding Area Details

The following information was established through undertaking an environmental database search (Ref.1) included in Appendix C and through a site walkover, pictures from which are included in Appendix B.

Table 2.2 ±Surrounding Area

|                  |   |                                                                           |
|------------------|---|---------------------------------------------------------------------------|
| Surrounding Area | N | Commercial property followed by Great Ancoats street.                     |
|                  | E | Heyrod Street followed by commercial properties.                          |
|                  | S | Churchgate buildings and Heyrod Street followed by commercial properties. |
|                  | W | Longacre street followed by a tram line and commercial properties.        |

### 3.0 Site History

A review of the available historical mapping as presented in the Envirocheck report (Ref. 1) and freely available satellite imagery has been undertaken and is presented in Table 3.1 below.

Table 3.1 ±Previous Site and Surrounding Area Uses and Potential Sources of Contamination (onsite uses are indicated in bold )

| Date        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | Potential Sources of Contamination                                                                                                                                                                                                                                                                             |
|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1848 - 1851 | <p>The majority of the site is occupied by terraced housing , with additional housing present in the southern part of the site. Norton Street and a street ODEHOOHG DV 31R &amp; through the site. A small section of a Timber Yard to the east falls within the site boundary.</p> <p>The majority of the area to south of the site is occupied by residential structures. 7KHUH LV D WLPEHU \DUG eastern boundary. There are various industrial structures near the site, including an iron foundry 40m to the north west, three cotton mills located 75m north west, 75m east and 70m north respectively.</p> <p>The Manchester, Ashton-Under-Lyne, Oldham and Stockport Canal is present 75m to the north west at its closest point. A branch of this canal is also present 120m north east of the site. The Piccadilly dock is present 250m north west. There is a pond present 200m to the south east followed by a reservoir present 250m to the south east.</p> | <p>xUncontrolled deposition of Made Ground during the construction of the on-site roads and residential dwellings.</p> <p>xContamination associated with the operation of the nearby industrial buildings.</p> <p>xContamination associated with the on-site Timber Yard and nearby industrial buildings.</p>  |
| 1891 - 1896 | <p>The area within the site boundary remains mostly unchanged, though some on-site Timber Yard structures appear to have been demolished and the Timber Yard is no longer marked.</p> <p>The Ancoats Goods Terminal has been constructed 75m south east of the site. The cotton mill to the north west has been replaced with a brass and iron works, the cotton mill to the north has been replaced by a corporation yard and the cotton mill to the east has been replaced by a grain store. A machinery works as been constructed 90m west of the site.</p> <p>The pond and reservoir previously present to the south east have been filled in as part of the development of the goods terminal. The Piccadilly Dock 250m to the north west has been infilled.</p>                                                                                                                                                                                                   | <p>xUncontrolled deposition of Made Ground associated with the demolition of the Timber Yard structures.</p> <p>xContamination associated with the operation of the nearby industrial buildings.</p> <p>xGround gas generation associated with the infill of the reservoir and dock with unknown material.</p> |
| 1908 - 1909 | <p>No changes have occurred on site.</p> <p>6RPH RI WKH UHVLGHQWLDO GZHOORXO western boundary have been demolished and replaced with a club. An iron works to the north east has been expanded substantially and is now present 150m away. A chemical works is now present 250m to the north east.</p> <p>A portion of the canal branch 120m north east of the site has been infilled.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              | <p>xUncontrolled deposition of Made Ground during the construction of WKH FOXE RQ WKH V western boundary.</p> <p>xContamination associated with the operation of the nearby industrial buildings.</p> <p>xGround gas generation associated with the partial infill of the canal.</p>                           |

| Date           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | Potential Sources of Contamination                                                                                                                                                                                                                                                                                                                                                                              |
|----------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1922 - 1938    | <p>No changes occur on site between 1922 and 1933. Between 1933 and 1938, the residential structures in the south eastern part of the site are demolished.</p> <p>The club and remaining residential structures immediately south west of the site have been demolished and replaced with a structure. The Brass and Iron Works to the north west is now marked as disused and the machinery works is now a stationary works. The former iron works 150m north east is now a textile machinery works. Between 1933 and 1938, the majority of the residential structures within 250m of the site to the south and south west have been demolished.</p> <p>The remainder of the canal branch 120m north east has been infilled.</p> | <p>xUncontrolled deposition of Made Ground during the demolition of the on-site residential structures and during the construction of the south western boundary, including the potential for backfill of basements.</p> <p>xContamination associated with the operation of the nearby industrial buildings.</p> <p>xGround gas generation associated with the infill of the remainder of the canal branch.</p> |
| 1948 - 1951    | <p>No changes have occurred on site.</p> <p>Several industrial structures have been constructed south and south west of the site, including a sheet metal works 40m away, a coppersmiths 70m away and a scrap metal works 110m away. Additionally, an engineering works is now present 30m north of the site, a bacon factory is present 50m north and a box factory is present 70m west. The textile machinery works 150m north east is now marked as warehouses.</p> <p>A ruin is marked 30m north east of the site, potentially indicating a structure destroyed by bombing during WW2.</p>                                                                                                                                    | <p>xContamination associated with the operation of the nearby industrial buildings.</p> <p>xThe UXO risk associated with WW2 bombing is discussed in Section 6.</p>                                                                                                                                                                                                                                             |
| 1963 - 1981    | <p>By 1978, the remaining on-site residential structures have been demolished. 1981 mapping shows that two warehouses have been constructed on site.</p> <p>1963 mapping shows that west of the site have been demolished structure and a warehouse on 1978 mapping. The Ancoats Goods terminal 75m south east of the site has been demolished by 1977. A structure and a warehouse is present immediately south west of the site on 1978 mapping.</p>                                                                                                                                                                                                                                                                            | <p>xUncontrolled deposition of Made Ground during the demolition of the residential structures and the construction of the warehouses on site, including the potential for backfill of basements</p> <p>xContamination associated with the operation of the nearby industrial buildings</p>                                                                                                                     |
| 1991 - 2000    | <p>The northernmost warehouse has been extended slightly to the north east.</p> <p>The bacon factory 50m north of the site is no longer marked. The works immediately south west of the site is no longer marked.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             | <p>xUncontrolled deposition of Made Ground during the construction of the warehouse extension.</p>                                                                                                                                                                                                                                                                                                              |
| 2000 - Present | <p>No changes have occurred on site.</p> <p>Satellite imagery shows that a tramline is constructed 15m north of the site between 2009 and 2013.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               | <p>xLimited potential for contamination during this time.</p>                                                                                                                                                                                                                                                                                                                                                   |

Potential sources of onsite contamination are further discussed in Section 7.0. Potential sources of contamination above not considered likely to impact the site have been discounted from the Preliminary Conceptual Site Model.

## 4.0 Geology, Hydrogeology and Hydrology

### 4.1 Geology and Hydrogeology

A study of the Envirocheck records (Ref. 1), BGS online borehole records (Ref. 2) and British Geological Survey (BGS) 1:50,000 mapping records (Solid and Drift Editions) for Manchester (2010) (Sheet 085) (Ref. 3) indicates the following geological and hydrogeological succession underlying the site:

Table 4.1a ±Geological/Hydrogeological Succession

| Geology                                                                                                                                                      | Associated Hydrogeological Classification       |
|--------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------|
| Made Ground is not indicated on BGS mapping. However, given the development of the site there is potential for localised Made Ground deposits to be present. | N/A                                             |
| Till, Devensian <sup>1</sup>                                                                                                                                 | Secondary Undifferentiated Aquifer <sup>3</sup> |
| Chester Formation Sandstone <sup>2</sup>                                                                                                                     | Principal Aquifer <sup>4</sup>                  |

1. These comprise a group of sediments laid down by the direct action of glacial ice, usually sandy, silty clay with pebbles, but can contain gravel-rich, or laminated sand layers; varied in colour and consistency.

2. Red-brown, yellow, or yellow-mottled, very fine- to coarse-grained sandstones that are commonly cross-bedded, locally micaceous, silty or argillaceous, pebbly or conglomeratic, and generally friable.

3. This designation is assigned in cases where it is not considered appropriate to classify as either Secondary A or Secondary B. This is usually due to the variable characteristics of the material.

4. These are layers of rock or drift deposits that have higher intergranular and/or fracture permeability ± meaning they usually provide a high level of water storage. They may support water supply and/or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.

There are no recorded faults within the site boundary. There are four recorded faults within 1km, with the closest being approximately 250m to the south west, oriented NW-SE.

There are sixteen BGS recorded boreholes located within 100m of the site. Of these records, fourteen are trial pits and associated with environmental improvement of the Ashton Canal Corridor, advanced to between 1.70m and 3.20m. The remaining two boreholes were advanced to over 20.00m bgl. The details of these deeper records are given in Table 4.1b.

The trial pits generally record Made Ground to depths of between 1.10m and 3.20m followed by soft to very stiff sandy and silty clay with coal inclusions. The Made Ground is generally described as containing ashes, cinders and bituminous material in addition to brick, flags, concrete, sand and clay. No visual evidence of contamination is noted, however one of the trial pit records (Ref SJ89NE1895)

There are three active groundwater abstraction points located within 1km of the site boundary. The nearest is located 461m VRXWK RI WKH VLWH IRU WKH SXUSRVH RI 35XEEHU.

The site is not located within a Source Protection Zone, with no potable groundwater abstractions points within 1km.

#### 4.1.1 Mining

mining reporting area, however it is not within a development high risk area and is not underlain by coal bearing measures. The closest mine entry is approximately 800m north east of the site. Coal outcrops and probable shallow workings are mapped approximately 1.2km north east of the site. As such, the risk to the development from coal mine workings is Low and has not been considered further at this time.

The Envirocheck report (Ref.1) confirms there are no recorded BGS mineral sites within 250m of the site.

#### 4.1.2 Other Ground Stability Issues

The Envirocheck report (Ref. 1) confirms that there is no hazard to very low risk from the following ground stability hazards on and around the site; running sands, collapsible and compressible ground, shrinking or swelling clay, landslide ground and ground dissolution.

#### 4.1.3 Ground Gas

The Envirocheck report (Ref. 1) lists 5 no. historical areas of infilled land (water) within 250m of the site. All are associated with the potential fill of ponds, rivers, marshes or docks, and are filled with unknown material. The nearest is recorded 96m north west of the site. The Envirocheck report does not list any areas of infilled land (non-water) within 250m of the site.

There is one registered landfill within 500m of the site, the Palmerston Street Landfill, which was active between 1986 and 1987 and is located 421m south east. This landfill is listed as accepting waste including inert and industrial waste, in addition to Ceramic Materials, & RQVWUXFWLRQ, QG :DVWHV 'Non-Dechate )HUPDQV 06WPIUDDOV Clay, Sand, Stone, Brick, Concrete and Slate. Prohibited Waste for this landfill included &KHPLFDO :DVWH RI \$Q\ 1DWXUH' DQG 3:DVWH )RUPLQJ 3ROO

There are no BGS recorded landfills within 500m of the site.

The Envirocheck report (Ref. 1) and online Radon mapping confirms the site is situated in a lower probability radon area where <1% of homes are above the radon action level. On this basis radon protection measures are not considered necessary in the construction of new dwellings or extensions.

Where the new development incorporates a basement the advice of a specialist Radon assessor must be obtained.

## 4.2 Hydrology

The nearest surface water feature is the Ashton Canal 77m north of the site, which has a river quality UDWLQJ RI 3 & ' R. The River Medlock is also present approximately 270m south east of the VLWH DW LWV FORVHVW SRLQW ZKLFK KDV D ULYHU TXDOLW\ UDW

There have been no recorded pollution incidents to controlled waters within 500m of the site during the past 20 years.

There are three active discharge consents within 500m of the site, all of which are operated by United Utilities for the purpose of storm sewage overflow. The closest concerns discharge to the River Medlock 254m west of the site.

There are two active surface water abstraction points located within 1km of the site boundary, both are sourced from the Ashton Canal. The closest abstraction point is located 944m north east of the site for WKH SXUSRVH RI 32WKHU, QGXVWULDO & RPPHUFLEDO /XWOLF7KHWH no potable surface water extractions within 1km of the site boundary.

## 5.0 Unexploded Ordnance (UXO) Risk Assessment

Military activities including those conducted as part of both the First and Second World Wars have resulted in a legacy of unexploded ordnance (UXO) being present within the shallow soils of the UK.

UXO result from various sources including both allied (military training) and German (bombing raids) with a guide figure of approximately 10% of all munitions failing to function as designed.

The likelihood of UXO being encountered on a development site is influenced by a number of factors including; the proximity to strategic targets, the nature of the development works being undertaken and evidence of local damage in the post-war periods amongst others. In order to determine the likelihood of UXO being present on a site, a step-wise risk assessment process is followed. This process is outlined within CIRIA C681 Unexploded Ordnance: A Guide for the Construction Industry (Ref. 5).

5 L V N 0 D S S L Q J (Ref. 6) has placed the site in a Moderate Risk area. Moderate risk areas are those that show a bomb density of 15 - 49 bombs per 1000 acres and may contain WWII targets.

Analysis of historical bomb mapping from the University of Manchester (Ref. 7) (Figure 5.1) shows that a high explosive bomb hit occurred approximately 250m south west of the site and a fire-bomb hit occurred approximately 250m to the north. Both hits occurred on the 22<sup>nd</sup> of December 1940.

Figure 5.1: Site boundary shown in red. Red circles represent fire-bomb hits, blue circles represent high-explosive bomb hits.

A review of historical maps from the Envirocheck report (Ref.1) I R X Q G W K D W D 3 5 X L Q ' L V P D U N H G the site on post-war mapping, potentially indicating bomb damage in close proximity to the site.

Considering the above, in addition to the fact the site has been only partially redeveloped after the war, the risk of encountering potential UXO as part of future intrusive works is considered Moderate. Therefore, it is recommended that a Detailed UXO Risk Assessment report be acquired for the site prior to beginning any intrusive works.

x The table below represents the first stage in the land quality risk assessment process: The Qualitative Risk Assessment.  
x . Q R U G H U I R U D G H Y H O R S P H Q W V L W H W R E H G H P H G Hydrogeological Investigation. The purpose of each stage of risk assessment is ultimately to establish, if there is a requirement for additional levels of assessment to be made in order to have sufficient confidence to support a risk characterisation or management decision, e.g. remedial action.

| Conceptual Site Model                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                      |                                                                                                                                                                                                                                                           | Qualitative Risk Assessment                            |                                                                                                                                                                                                                                                                                                                                                                                                              |              | Recommended Actions                                                                             |

## 7.0 Conclusion and Recommendations

The qualitative risk assessment (QRA) determined a varied level of risk associated with the proposed development from Low to Moderate.

The QRA concluded by recommending that generic quantitative risk assessments (GQRA) were conducted in order to confirm the assessment of risk ascribed to each of the respective potential pollutant linkages (PPLs). It is recommended that the GQRA is conducted as part of a ground investigation in support of the engineering design of the proposed development an outline scope for which is detailed in the section hereafter.

In summary, the following recommendations are made:

- x Obtain a Detailed Unexploded Ordnance (UXO) Risk Assessment report for the site prior to any intrusive works taking place;
- x Undertake an intrusive ground investigation;
- x Undertake a GQRA as part of the ground investigation; and
- x Undertake Ground Gas Monitoring.

It is further recommended that this work is completed in advance of any development works taking place and could be undertaken in conjunction with a geotechnical investigation.

### 7.1 Contaminants of Concern

Potential contaminants of concern associated with the sources identified within the Conceptual Site Model in Section 6.0 of this report include but are not limited to: broad range aliphatic and aromatic hydrocarbons present within any fuel oils; polycyclic aromatic hydrocarbons (PAHs); inorganic compounds including heavy metals; and asbestos present in discarded building materials.

Potential contaminants associated with the air-born dust/particulates include but are not limited to: polycyclic aromatic hydrocarbons and inorganic compounds including toxic metals that are also accounted for by potential onsite contaminants of concern.

### 7.2 Other Considerations

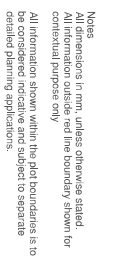

The requirement for additional surveys, e.g. arboricultural and ecological surveys, should be confirmed through advice from a suitably qualified and experienced professional

## Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination. For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client. In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.
