Good morning

Please find attached a photograph of an area within the basement that has been uncovered and reveals a membrane that was installed below the basement slab prior to casting. This membrane would have been installed above and below the insulation layer that went in below the basement slab.

Please further note that above the slab, a tanking egg crate type layer has also been installed which is lapped with the similar tanking layer applied to the walls of the basement. The tanking layer was sealed and screeded over, which would further seal any areas of escape for the gas. If potential gas is required to be vented through the walls, then air vents in the external walls can be installed around the perimeter of the extension.

Please let me know if you have any issues with the above. We look forward to hearing from you.

Kind regards
