1 SUMMARY 4

1 SUMMARY

This document provides a statement of the proposed works to be carried out to demonstrate if there is any risk of interference created by the proposed two storey extension on TV and radio reception within the area to satisfy Planning Strategy for Manchester City Council.

This is to provide an indication of the area of television signal reception likely to be affected by the development to provide a basis on which to assess the extent to which the development during construction and once built, will affect television reception and to ensure that the development at least maintains the existing level and quality of television signal reception for the City of Manchester.

As the premises is currently at a height lower than the surrounding buildings and will be no higher than them with the proposed extension. This should eliminate any possible issues to the TV signal of surrounding buildings.

If required measurements of the existing television signal reception within the potential impact areas before development commences shall be made. The work shall be undertaken either by an aerial installer registered with the Confederation of Aerial Industries or by a body approved by the Office of Communications, and shall include an assessment of the survey results obtained.
