Appendix B Landmark Envirocheck Environmental Database Report

1.0 INTRODUCTION

1.1 This report describes a geo-environmental desk study on the site of a DPV facility, Royal Brewery, Denmark Street, Manchester, carried out for our Client, Norder Design Associates.

1.2 The objectives of this investigation have been to obtain information relating to the geo-environmental conditions pertaining to the site and its surroundings and to produce an assessment of these factors in relation to the proposed development.

1.3 We have been advised that the proposed development will generally comprise up to 8 brewery vessels, the lower part of which will be enclosed within a works building. The southern area of the site will be developed with brewery road. We understand that ground levels at the site will remain generally unchanged during the proposed development. If the assumptions made above and in the later sections of this report are not the case, then the recommendations presented within this report may require some amendment.

1.4 This report has been produced on behalf of the Client, Norder Design Associates and no responsibility is accepted to any third party for all or any part. This report should not be relied upon or transferred to any other parties without the express written authorisation of Emcus Limited. If any unauthorised third party comes into possession of this report, they rely on it at their own risk and the authors owe them no duty of care or skill.

1.5 The findings and opinions conveyed from the desk study are based on information obtained from a variety of sources, as detailed within this report, which Emcus Limited believes are reliable. Nevertheless, Emcus Limited cannot and does not guarantee the authenticity or reliability of the information it has obtained from these sources, and used in the production of this report.

1.6 Whilst this report may express an opinion on the possible configuration of strata, groundwater, ground gases or contaminants between or beyond various locations, or on the possible presence of features based on visual, verbal or published evidence, this is for guidance only, and no liability can be accepted for its accuracy.

1.7 The site plans and drawings enclosed in this report should not be scaled off.

2.0 SITE DESCRIPTION

2.1 Site Location & Access

2.1.1 The site, which is irregular in shape and 0.11 hectares is located in the central area of Royal Brewery, Denmark Road, Manchester, (see drawings J1925/01 & J1925/02). The Ordnance Survey grid reference for the approximate centre of the site is SJ 8397 9587.

2.1.2 For the purpose of the site walkover (undertaken 8th September 2020), access to the site was gained directly from the adjacent areas of the brewery hardstanding.

2.2 Site Description & Surroundings

2.2.1 At the time of the walkover, the northern area of the site generally comprised an approximately flat lying area of concrete and asphalt hardstanding, forming part of a brewery loading area, road and car-park. In addition, the southern area of the site generally comprised part of an approximately flat lying grassed lawn and planted border. A number of trees were present in the south-eastern margin of the site along the edge of the lawn.

2.2.2 The site was surrounded by other parts of the brewery generally comprising hardstandings / roads to the east / west of the site, several vessels to the north of the site and an office / welfare building to the south of the site.

3.0 DESK STUDY

3.1 Historical Maps

3.1.1 Extracts of historical maps and aerial images of the site area included as part of a pack of the 'Envirocheck' information obtained from the Landmark Information Group Ltd, have been reviewed to obtain an indication of the history of the site and its environs. These 'Envirocheck' plans are reproduced in Appendix A of this report. The plans are dated between 1848 and 2019 and generally comprise a montage of extracts, taken from the original old maps / images of approximately the same publication dates.

3.1.2 The historical map dated 1848 indicates that northern area of the site was generally undeveloped, having comprised part of a larger field, presumably used for agriculture. The southern area of the site is indicated to have comprised part of a road / track.

3.1.3 The subsequent historical plans dated 1893 to 1972 indicate that the northern area of the site generally comprised part of 4 buildings (considered to be residential houses) and associated gardens / yards The maps from that period indicate that the southern area of the site generally comprised part of a road, (Derby Road).

3.1.4 The historical plans dated 1978 to 2020 indicate that the site then became a hardstanding and landscaping area within the curtilage of Royal Brewery.

3.1.5 The historical map dated 1848 indicates that area surrounding the site generally comprised undeveloped fields with scattered houses and associated infrastructure. The 1848 map also indicates that a surface watercourse (Rusholme Brook) was present 45m to the north of the site.

3.1.6 The historical maps dated 1893 to 1896 indicate that the area surrounding the site was generally developed with residential housing and associated infrastructure, but with a brewery (identified as Albert Brewery) 40m to the north-west of the site. The 1893 to 1893 maps also indicate that a Timber Yard was present 90m to the south of the site. The maps from that period (1893 to 1896) indicate that the watercourse shown 45m to the north of the site on the 1848 map had been culverted / diverted as the area was developed.

3.1.7 The maps dated 1908 to 1972 indicate that the area surrounding the site generally remained developed with residential housing and associated infrastructure, including the area of the former timber yard 90m to the south of the site. The maps from that period (1908 – 1972) indicate that a brewery (identified as Moss Side Brewery and then Royal Brewery) remained 40m to the north-west of the site and an electricity sub-station (Manchester Corporation) is indicated to have been present 50m to the north of the site. Furthermore, the maps dated 1950 to 1972 indicate that a corporation yard was present 22m to the north of the site, with small clothing works and engineering works scattered amongst the residential housing within 250m of the site.

3.1.8 The historical maps dated 1978 to 2020 indicate that the area immediately beyond the site boundaries was generally developed with buildings, silos / tanks, hardstandings and structures of the Royal Brewery. The area beyond the brewery is indicated to have generally comprised residential housing and associated infrastructure The maps dated

1984 to 2020 indicate that an electrical sub-station was present 15m to the east of the site and a works was present 40m to the north-east of the site.

3.2 Geology, Hydrogeology & Hydrology

3.2.1 The following publication of the British Geological Survey (BGS) has been examined in respect of the strata underlying the site:

- Map, Sheet 85 Manchester, Bedrock & Superficial, Scale 1:50,000, dated 2011.

3.2.2 The published geological map indicates that the natural strata beneath the site comprises glacial till, underlain by the Triassic Chester Pebble Beds Formation (CPB). Till is described on the geological map as sandy clay with unsorted pebbles, cobbles and some boulders. The CPB is described as reddish – brown moderately cemented sandstone.

3.2.3 In addition to the natural strata, Made Ground is anticipated beneath the site associated with the historic / previous development.

3.2.4 The extracts of the Aquifer Designation maps within the Envirocheck report indicate that the superficial deposits underlying the site (glacial till) is a Secondary Undifferentiated Aquifer and the bedrock underlying the site (Chester Pebble Beds Formation) is a Principal Aquifer.

3.2.5 The historic County Series and contemporary Ordnance Survey maps do not identify any named surface watercourses within 250m of the site. However, a culverted watercourse (Rusholme Brook) is indicated to be present 45m to the north of the site.

3.3 Coal Mining

3.3.1 The site is located in an area where a Coal Authority mining is not required.

3.4 'Landmark' Environmental Database Report

3.4.1 A search and review has been undertaken of information held on the Landmark 'Envirocheck' database, which provides information on the environmental setting of the site. A copy of the 'Envirocheck' Report is reproduced in Appendix B of this report, with the salient points summarised below:

- The Envirocheck report identifies a historical landfill 227m to the north-west of the site. That landfill is reported to have operated between May 1994 and June 1995 and accepted inert and industrial waste. The Envirocheck does not identify any other landfills and / or waste management facilities within 250m of the site.
- The Envirocheck report identifies 18 Integrated Pollution Prevention & Controls (IPPC) within 250m of the site. Those IPPCs are located 52m – 58m to the north-west of the site at Royal Brewery and generally described as 'animal, vegetable

and food treating'. 4 of the IPPC are described as 'disposal of non-hazardous waste involving biological treatment'.

- The Envirocheck report identifies a single Local Authority Pollution Prevention & Control within 250m of the site. That PPC is located 215m to the south-west of the site as is described as 'PG1/14 Petrol filling station'.
- The Envirocheck report identifies a single Pollution Incident to Controlled Waters within 250m of the site. That pollution incident was located 218m to the south-west of the site and classified as a minor incident.
- The Envirocheck report identifies 8 water abstractions within 250m of the site. 6 of those abstractions are located 52m to the north-west of the site for brewery / wine process water and cooling water. The remaining 2 of those abstractions are located 87m to the west of the site for brewery / wine process water and cooling water.
- The site is located in Zone I (Inner Protection) of a Source Protection Zone.
- The Envirocheck report identifies 10 Contemporary Trade Directory Entries within 250m of the site, all of which are described as inactive. The closest of those entries are located 58m to the north-west of the site and described as brewers. The other entries within 250m of the site are identified as hospitals; electrical goods – manufacturers & wholesales; pumps – sales, servicing & repairs; manufacturers; recycling centres; and printers.

3.5 Radon

3.5.1 The Envirocheck Report advises that no Radon protection measures are necessary in the construction of new dwellings or extensions at the site.

3.6 Previous Ground Investigations

3.6.1 Emcus have historically undertaken ground investigations for a fermentation building centred approximately 30m to the south-west of the site and yeast block centred approximately 50m to the west of the site, (Report references MJH/J1094A/D1/1, dated 2012 and MJH/J1664/D1/1, dated March 2018). The boreholes advanced as part of those investigations generally encountered Made Ground to depths of 1.3m – 2.8m bgl., (but locally to 5.1m bgl.), underlain by natural strata. The latter generally comprised firm to stiff grey-brown gravelly clays and medium dense sands to depths of 5.4m to 7m bgl., underlain by very dense sand and extremely weak sandstone. The chemical analyses undertaken as part of those investigations revealed those areas were generally free of contamination for an industrial end use. An elevated concentration of lead was, however, revealed in 1 of the Made Ground samples analysed from adjacent to the western boundary of brewery.

4.0 PRELIMINARY CONCEPTUAL SITE MODEL

4.1 Introduction

4.1.1 Current policy in the United Kingdom for the control and treatment of potential / actual contamination on development sites is based on a 'suitable for use' principle. In effect this means that where the contamination that may be present on a site is deemed to pose an unacceptable risk to human health or the environment, appropriate remedial or mitigation measures should be provided, appropriate to the intended form of development. The current practice with respect to the assessment of the risks posed by potentially contaminated land is to consider possible Source – Pathway – Receptor (Target) linkages between any contaminant sources on, or in the vicinity of, the site and sensitive potential targets (site users, controlled waters, etc.). This Source – Pathway – Receptor approach whilst common to all developments must be tailored to the conditions and environment of the specific site by use of a 'Conceptual Site Model'. At a preliminary (eg. Phase 1 Desk Study) stage, the Conceptual Site Model may be limited to a qualitative assessment only, but with more information from future intrusive investigations, it may be appropriate to develop more detailed quantitative models.

4.2 Preliminary Conceptual Site Model

4.2.1 Potential Contaminant Sources

From the desk study researches, potential contaminant sources affecting the site can be split between on site and off site sources and further divided between current and historical land uses. On this basis, the following potential contaminant sources could be considered.

- On Site Sources - Current/Recent and Historical Land Uses;
  - Possible contamination associated with Made Ground on the site. - Potentially a range of metals, metalloids, asbestos and Poly Aromatic Hydrocarbons (PAHs).
  - Possible contamination associated with the storage and / or usage of fuel and oils on the site. – Potentially Total Petroleum Hydrocarbons (TPH-CWG).

- Off-site sources - Current/Recent and Historical Land Uses;
  - Possible ground gasses from the historical landfill 227m to the west of the site. – Potentially Carbon Dioxide and perhaps Methane.

4.2.2 Potential Receptors / Targets

Again these may be On-Site or Off-Site, Animal / Human (End Users) or Environmental (Controlled waters, etc.) Receptors / Targets.

- Human & Animal On-site & Off-site;
  - Construction Workers, End Users, Members of the Public, Users & Occupiers of adjacent premises.

- Build-up of ground gas & vapours / fumes in confined spaces (i.e. compartmental rooms, service chambers, etc.).
- Local wildlife.

- Environmental, On-site & Off-site:
  - Ground water – The superficial deposits beneath the site are identified as a Secondary Undifferentiated Aquifer. Underlying the superficial deposits, the bedrock are identified as a Principal Aquifer.
  - Surface water – No surface watercourses identified within 250m of the site. A culverted watercourse may be present 45m to the south of the site.

4.2.3 Pathways

Migration pathways between the above potential contaminant sources and receptor targets could include, with respect to the various human and environmental receptors / targets:

- Pathways to Animal / Human Targets:
  - On-site (Construction Workers, End Users and members of the Public)
    - Dermal contact.
    - Ingestion of soils.
    - Inhalation of dusts, etc.
    - Migration of ground gas & fumes / vapours through permeable strata to accumulate in confined spaces (i.e. compartmental rooms, service chambers, etc.).
  - Off-site
    - Inhalation of dusts, etc.

- Pathways to environmental Receptors / Targets:
  - Ground water – The superficial deposits beneath the site are identified as a Secondary Undifferentiated Aquifer. Underlying the superficial deposits, the bedrock are identified as a Principal Aquifer.
  - Surface water – No surface watercourses are identified within 250m of the site. A culverted watercourse may be present 45m to the south of the site.

5.0 PHASE 1 GEO-ENVIRONMENTAL ASSESSMENT

5.1 Contamination

5.1.1 It is considered unlikely that the indicated historic / previous usage of the site and the surrounding area will have resulted in gross contamination of the site.

5.1.2 However, Made Ground is anticipated beneath the site, associated with its historic / existing usage. That Made Ground has the potential to contain concentrations of some metals, poly aromatic hydrocarbons and asbestos which might exceed the published Soil Guideline Values / assessment criteria for a commercial / residential end use.

5.1.3 It is considered that the hardsurfacing of the building floor / tank base and roadway will provide a break in the contamination source to receptor pathway and prevent any likely concentrations of metals, PAHs and asbestos, etc., from posing a significant risk to end users in those areas of the site.

5.1.4 Furthermore, the possibility of some localised contamination beneath the site from the historic storage and usage of fuels / oils cannot be completely discounted at this stage. Any such contamination may require localised excavation as a 'hot spot' and disposal off-site at a suitably licensed waste management facility.

5.1.5 Excavation arisings should be appropriately disposed of off-site at a suitably licensed recycling / waste management facility.

5.2 Radon and Other Ground Gases

5.2.1 The desk study indicates that a historical landfill is present 227m to the north-west of the site. That historical landfill has the potential to generate concentrations of carbon dioxide and perhaps methane which may impact the proposed development at the site.

5.2.2 At this stage and in the absence of any site specific gas monitoring data and assessment, it is recommended that an allowance is made to incorporate gas protection measures into the proposed new building surrounding the base of the tanks suitable for characteristic gas situation CS2, as defined by BS 8485: 2015+ A1: 2019 Code of Practice for the design of protective measures for methane and carbon dioxide ground gases for new buildings. For the proposed industrial building encasing the bottom of the tanks, (Type D Building) it is anticipated that the most appropriate method of achieving the required gas protection score (minimum 1.5 points) for CS2 will comprise a cast in situ ground bearing floor slab and incorporation of an appropriate gas resistant membrane barrier.

5.3 **We recommend that the above geo-environmental assessment is discussed and agreed with the Local Authority, etc., prior to any irrevocable actions being taken.**

6.0 PHASE 1 GEOTECHNICAL ASSESSMENT

6.1 Foundations & Construction

6.1.1 The strata beneath the site is indicated to comprise glacial till, underlain by Chester Pebble Beds Formation. In addition, Made Ground is anticipated beneath the site associated with the historic / existing development.

6.1.2 The Made Ground beneath the site is unlikely to provide an appropriate foundation bearing strata due to the variability and settlement characteristics of that strata.

6.1.3 It is anticipated that piled foundations advanced down to the Chester Pebble Beds are likely to be required for the proposed tank bases.

6.1.4 Strip / pad foundations bearing on glacial till may prove appropriate for the industrial building which will encase the lower part of the tanks. However, if deeper Made Ground is encountered beneath the site, piled foundations may also be required for the building encasing the lower part of the tanks.

6.2 We would recommend that the Phase I assessments within this report are confirmed by an appropriate intrusive investigation, prior to any irrevocable actions being taken.

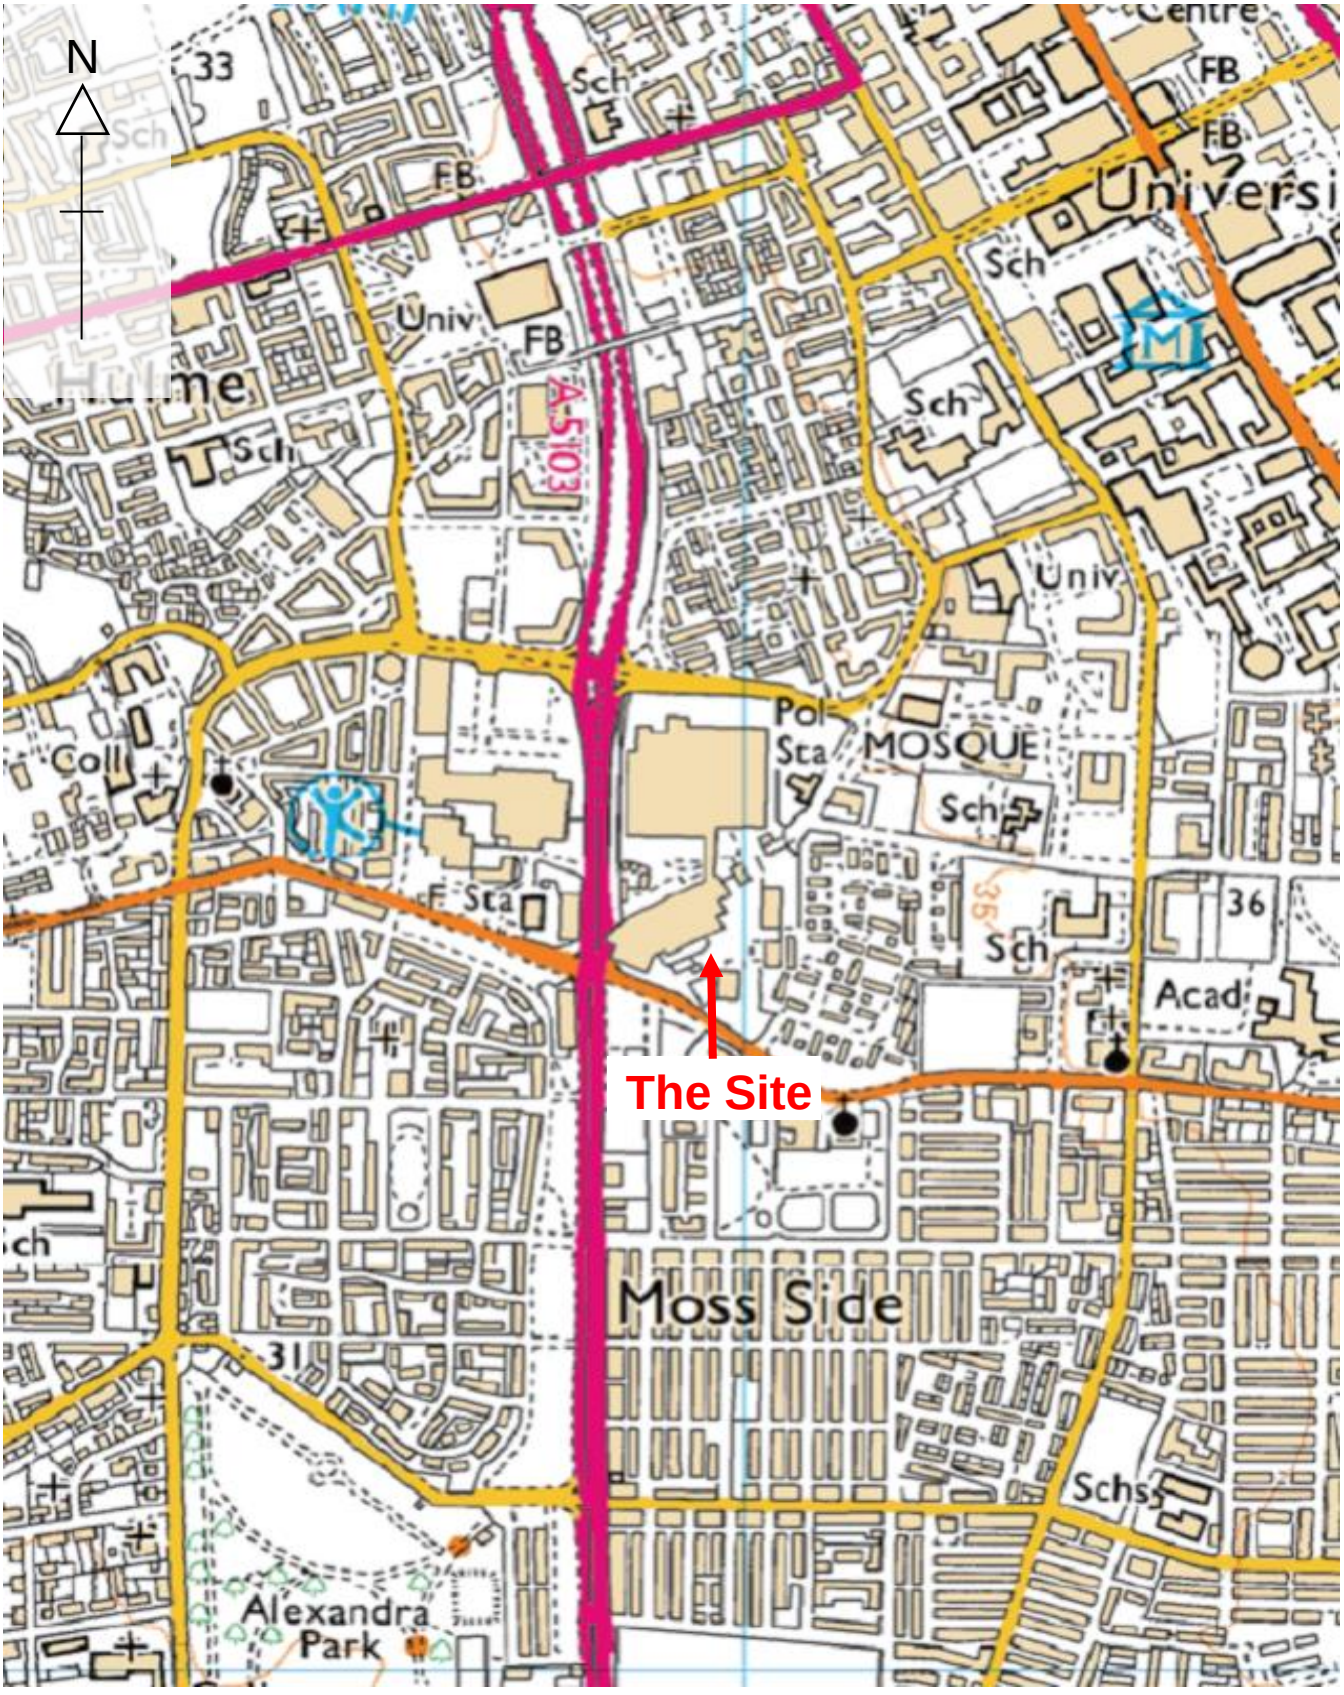

We trust the above report is suitable for your present requirements. Should you have any comments or queries, wish to discuss any of the above matters, or require any further assistance, please do not hesitate to contact us.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

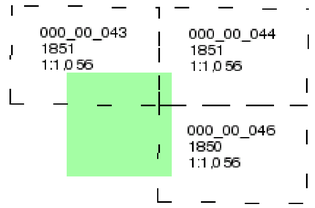

Published 1850 - 1851

Source map scale - 1:1,056

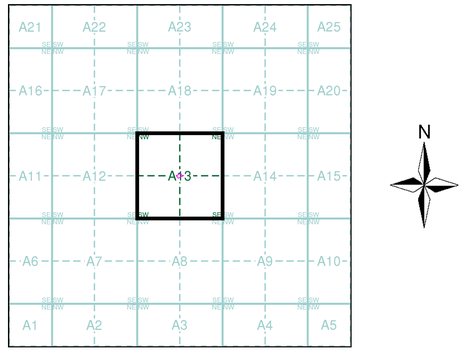

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

LANDMARK INFORMATION GROUP®

Lancashire And Furness

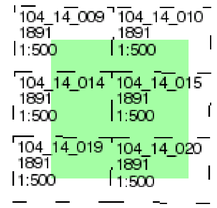

Published 1891

Source map scale - 1:500

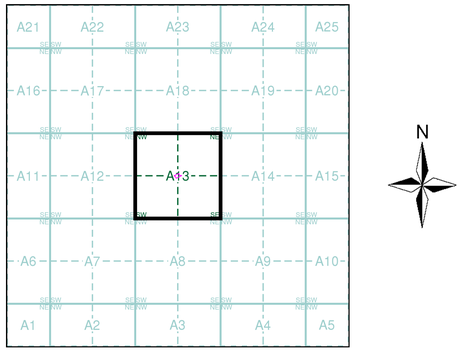

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

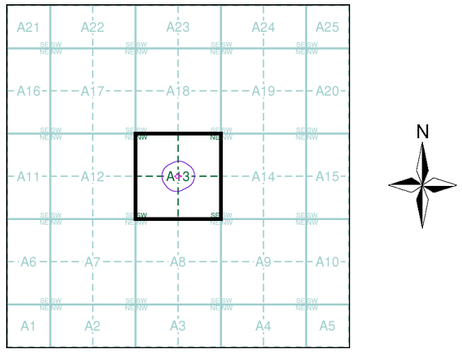

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1974 - 1976

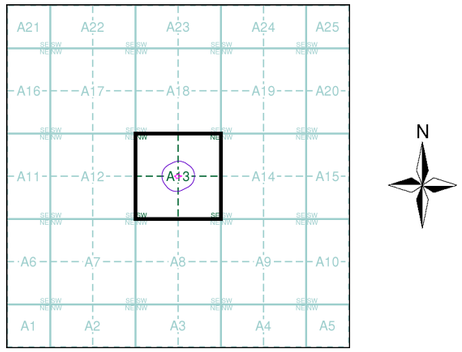

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Large-Scale National Grid Data

Published 1992

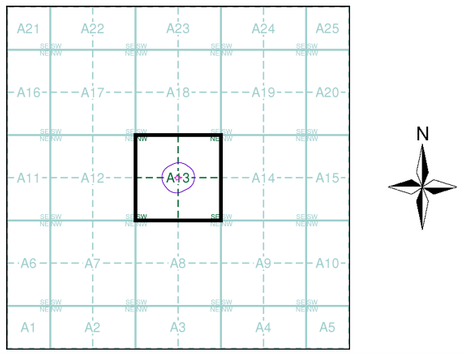

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

243,8 — Values for prominent elevations

186.0 — Numbers for spot elevations, depth soundings, contour lines, etc.

0,2 — Velocity of the current, width of river bed, depth of river

Fractional terms: length and capacity of bridges; depth of fords and condition of the river bottom; height of forest and the diameter of trees

Russian Alphabet (For reference and phonetic interpretation of map text)

Lancashire And Furness

Published 1848

Source map scale - 1:10,560

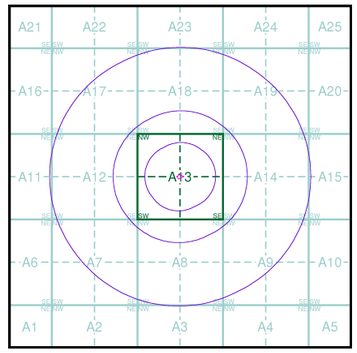

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

LANDMARK INFORMATION GROUP®

Manchester

Published 1975

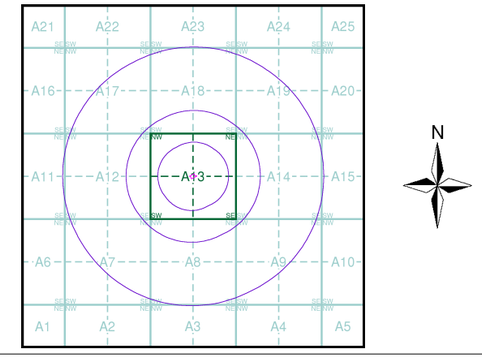

Source map scale - 1:25,000

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

Ordnance Survey Plan

Published 1980 - 1985

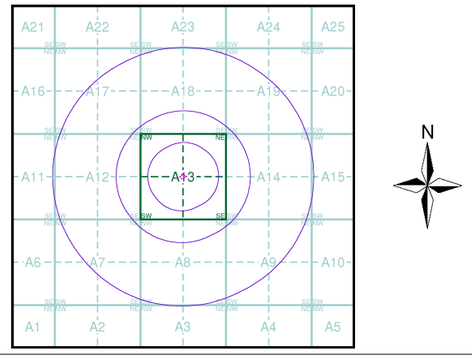

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

10k Raster Mapping

Published 1999

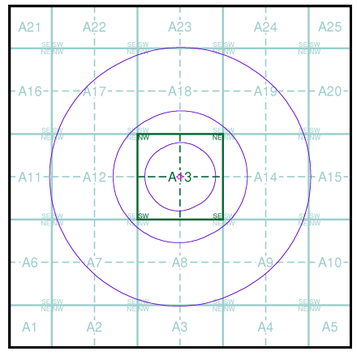

Source map scale - 1:10,000

The historical maps shown were produced from the Ordnance Survey`s 1:10,000 colour raster mapping. These maps are derived from Landplan which replaced the old 1:10,000 maps originally published in 1970. The data is highly detailed showing buildings, fences and field boundaries as well as all roads, tracks and paths. Road names are also included together with the relevant road number and classification. Boundary information depiction includes county, unitary authority, district, civil parish and constituency.

VectorMap Local

Published 2020

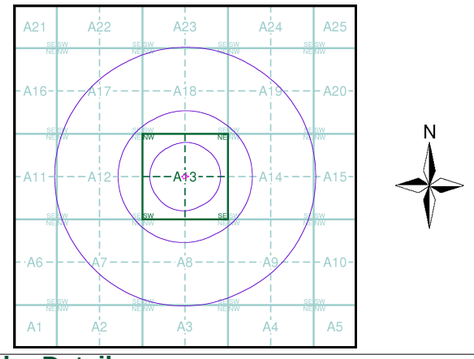

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

A selection of organisations who provide data within this report:

Map data

British Geological Survey
NATURAL ENVIRONMENT RESEARCH COUNCIL

Environment Agency

NATURAL ENGLAND

Envirocheck reports are compiled from 136 different sources of data.
