

DESIGN NOTE: HVM BOLLARDS ALONG HUNST BANK ENTRANCE

Use of retractables: Implications on pedestrians

These bollards are located on the ASM site and should not affect vehicular or pedestrian operations of the Hunts Bank Highway. The proposed use of these bollards would only be lowered in a managed operation to allow vehicles onto the ramp or into the protected terrace area behind. The likely use of vehicles would be for cleaning or maintenance and would be closely managed to not conflict with ingress / egress times and excess people movements in this area. Appropriate health and safety measures will be included in the operational management plan of this area.

Location of proposed retractable bollards
