Dear Sakina Patra

Thankyou for your enquiry for the above project and giving us the oportunity to provide you with our very best quotation. Please find below an estimated cost for the supply of materials that best meets your requirements and building constraints. At Casavent we aim to provide solutions that overcome any building constraints on site using our industry experience and extensive knowledge of the building regulations and good practise guidelines

Inclusions

Fitting of all ducting supplied by Casavent following their ventilation design.

Fitting the unit supplied by Casavent in the location indicated on their ventilation design.

Connections from ducting to unit in the way specified by Casavent (flex/solid).

Cutting holes though Gypframe type metal and single skin plasterboard (max 20mm plasterboard) to accommodate duct runs.

Cutting holes through plasterboard to accommodate ceiling valves (positions of flex must be marked when ceilings are going up to avoid us hitting metal when cutting board. No making good charges will be accepted if terminations are not marked prior to us cutting any plasterboard).

Fitting of ceiling diffusers in pre agreed positions.

Exclusions

Any associated electrical work i.e. wiring of the unit and/or boost switches (this can be quoted for as an extra cost subject to a site survey).

Any associated plumbing work i.e. connecting condense drain pipe (this can be quoted for as an extra cost subject to a site survey).

Any builders works i.e. core holes, holes through any substrate other than plasterboard (this can be quoted for as an extra cost subject to a site survey).

Removal of associated rubbish or excess materials from site. (all rubbish will be tidied and put in waste disposal units if they are available).

Any additional design revisions or runs that deviate from Casavent's ventilation design that were aproved before work had started (these works will be carried out but may be charged for as additional works).
