RISK CONTROL MEASURES AND PROCEDURES FOR IDENTIFIED HAZARDS

Emergency contact details	
Specialist training required (PASMA etc). Include who needs this training.	

Description of safe method of work
 Ensure all signs and barriers are put in place before the works starts.

Move all materials and tools safely to the working area.

Ensure all work is safe to do so before you start.

We have not identified any existing Lead guttering & Accessories present to the external properties however we will proceed with the repair to the guttering as follows:

Remove any damaged Guttering by unclipping the UPVC guttering Length at each end at the gutter connection, take care not to disturb or damage the EDPM rubber Seal.

Replace with New approved Flopast UPVC guttering section and Clip at both ends.

Replace any missing Stop ends, External 90 deg gutter angle, outlet, downpipe, offset, Fascia Bracket & Downpipe Bracket with the approved Flopast product to suit profile.

If replacing downpipe, remove damaged section by removing shoe at bottom, unclip downpipe bracket and remove damaged section, and downpipe connector. Replace with new approved Flopast Downpipe section and reverse method of fitting.

Note all Gutter Brackets, downpipe clips & Hopper Heads removed or replaced will be fitted into existing positions so no new fixing positions will be required.

Tools/plant to be used:					
Have all tools/equipment been tested/inspected as safe to use?					
Are 'Permits To Work' required (for high hazard work)?		Identify permit type:		Person responsible for this permit:	
Are hazardous materials to be used?			Are COSHH/ risk assessments/data sheets available?		
Will the work create harmful noise?		If yes, what tools/plant will be used?			
Noise categories:	Select from here (click)				
Control measures:					

(Attach sketches/drawings/photos here as appropriate)
