

Material samples

The XYZ Pavilion is a modest intervention in the built-up urban grain of Spinningfields. The building comprises a single storey gallery with a flexible internal layout.

Externally, the Pavilion is envisaged as a textured black box. Charred larch slats will clad all exterior elevations apart from the large window on the NW elevation and large window and entrance on the eastern elevation that will be revealed when the shutters are opened. The shutters comprise a seamless continuation of the walls.

The roof of the pavilion is proposed as a Sedum roof blanket

The building plot and final development is surrounded on all elevations with granite paving as per the 'Spinningfields pallet'

The material types therefore comprise:-

- Charred Larch slats fixed onto a black breather membrane
- Black stained large timber window (visible when screen opened)
- Black stained timber framed windows at high level
- Sedum roof
- Granite paving

Samples of each material will be provided for inspection as follows:-

1 Charred timber slats	Physical samples to be provided and any options reviewed following stage 5 design and ahead of placing the subcontract package / commencement of this element on site (A similar selection process as undertaken by the applicant on The Ivy pavilion building)
2 Black stained window frames	Samples will be provided along with item 1 above

3 Granite paving	Available for inspection now. The elevations will be blended into the existing granite paving
4 Sedum roof	A previously completed and maintained example will be selected and associated site visit will be arranged to one of the proposed subcontractor's previous schemes, ahead of his procurement
