Subject: Re: Airport City North - THQ/Plot E Tree Clearance Management Plan

Dear Eve,

Thank you for your email. The Council cannot give you formal confirmation as you have not sought to discharge the relevant conditions.

I can confirm that from a contaminated land point of view that the Council is satisfied that the information provided would not trigger the need to commence discharging the contaminated land condition.

Highways are satisfied that the information provided is satisfactory from their point of view in terms of the management of the clearance works and no objection was received from Environmental Health to the method statement for vegetation and tree clearance works.

I would be grateful for any result of the assessment of trees identified for removal requiring surveying by the development ecologist be forwarded to me for recording against the relevant condition attached to the THG planning approval.

At this time I have had no correspondence from GMAAS with regards to archaeology and the statement provided to me so works should, therefore, proceed with caution in this regard.

Kind regards

Rob Griffin
