

3

- Tree(s) of high quality and value (A)
- Tree(s) of moderate quality and value (B)
- Tree(s) of low quality and value (C)
- Loss to condition

- General Notes
- Tree canopies have been measured and plotted at their cardinal points for clarity and presentation purposes.
  - The location and attributes of all trees have been approximated unless otherwise stated.
  - The Root Protection Area (RPA) is a target design tool indicating the minimum area around a tree deemed to contain sufficient roots and nodules to ensure the tree's viability and where protection of the roots and soil structure is to be treated as a priority. (Refer to main report for further details).
  - Site traffic or obstructions encountered at the time of the survey may have resulted in some features being omitted or their attributes being approximated.
  - Tree works are to be undertaken by qualified contractors to BS5836:2010.
  - Trees are to be risk assessed for existing and future safety.
  - The arbicultural survey is based on the supplied topographical survey. The location of features shown has not been checked.
