SCAN-STICK

Hip Hop Chip Shop: External Signage

We aim to install a tray sign and projecting sign, both signs mounting to a custom built metal frame.

The frame will affix to the existing door framework via techbolts.

All fixings to be applied to the existing metal framework, with no need to drill into the surrounding brickwork.

Following feedback from the city council planning permission we will be using the existing projecting sign at Sugo as a guide for our projecting sign to ensure consistency.

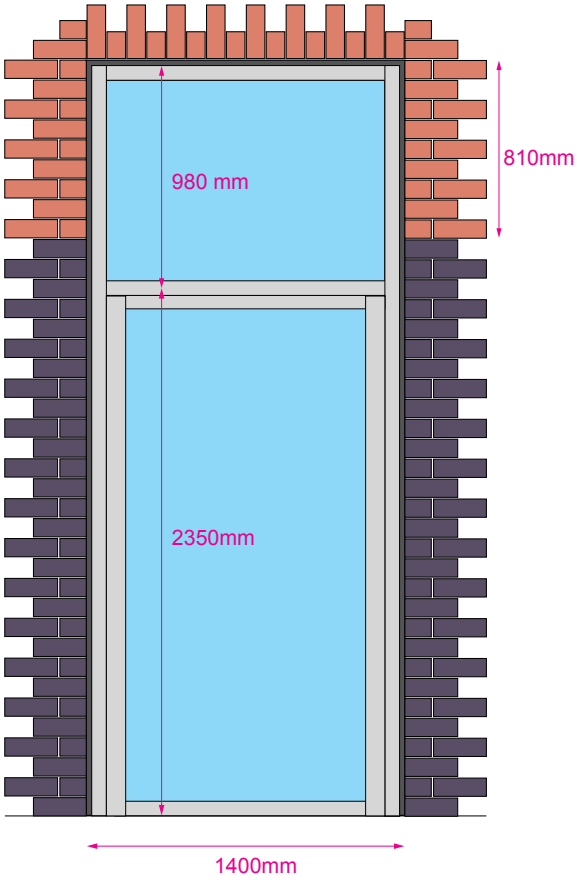

Existing view - Blossom Street
