Site Location Plan - 1:500

DESCRIPTION

The secure cycle lockers will be supplied as horizontal single lockers. Each locker is a complete unit allowing them to be installed in a bank, but with the benefit of being able to remove and relocate without the need for ordering extra side panels.

All lockers are fitted with a two point internal locking mechanism in mild steel fitted between a double door skin. They come with a standard hasp and staple fitting for users to use their own padlocks or can also be fitted with the high security Multi-Lock system that allows for a managed key system.

The cycle lockers are made from hot dipped galvanised steel to BS EN ISO 1461 which ensures durability and longevity. The galvanised steel frame can be polyester powder coated in a choice of 14 standard colours (custom colours available at a surcharge) or can be provided in brushed or polished stainless steel
