Subject: Re: Lux levels & Samples

Hi Owen,

In response to the Council's queries, we would be proposing that the external signage would be on from 6am to midnight each day, and the supplier has informed us that the level of illumination would be around 550 cd/m.

Kind Regards,

Robert Stirling BSc (Hons) MSc

> Additionally regarding the external signage application. please find attached the proposed Elevations for the external lighting application and MCC's response email. The information we will need from the lighting designer is the proposed lux level of the external signage as well as confirmation of whether the signage will be on for 24hrs or only outside of daylight hours. We will need a response to the application at latest by the 5th of April.
