Design Access statement.

Our client requires the replacement of an existing thick framed aluminium shopfront to be replaced by a 10mm toughened glass minimal appearance new glazed shopfront with 25mm and 37mm aluminium framed glazed panels.

Also the existing roller shutter of which is a manual roller shutter, we intend to replace like for like with an aluminium electronic roller shutter.

My business Intent Design Ltd is managing the shopfitting on this project and after further verbal consultations with planning officer we were advised that the 850mm access for the door and the opening force were the only elements required.

We have applied for planning, although we are unsure as we are replacing windows and door in an existing premises whether we need this planning application. So for this to be considered we have prepared the required documentation and fees just to be on the cautious side.

I can be contacted on 07813 090541 for further clairifaction.

Kind Regards

Paul Dodd
