10/623/11. Nov 2011
Design and Access statement.

Celestial Church of Christ.
49-51 Vernon Street, M9 5PL.

The church is active and the congregation is expanding within the local community.
They require addition floor space that is flexible so it can be used for worship and social activities including children's and youth group use.

The land and existing buildings footprint enables a side extension to be connected alongside the existing in a way that will enable the space to be inclusive or separate.
An independent access at the southeast end of the building together with movable internal partitions enables the building to be used with two separate functions taking place at the same time.
A small gallery will be provided within the extension offering further activity space.

The proposed extension needs to be economic in construction and a simple steel frame with brickwork walls and a metal insulated roof offers this.

All access points will be ramped or level.
The new wc facility will be suitable for all users.
