SALES, SERVICE, DESIGN OF NEW AND USED CATERING AND BAR EQUIPMENT

Reference

45 South Church Parade
Collihurst
Manchester
M40 7GE

Dear Ali

Please find specification for proposed kitchen extract system.

The system will comprise a 4 m stainless steel canopy complete with stainless steel baffle filters, 4 m ductwork going through the back wall terminating above eave level via a high velocity discharge cowel.

The high velocity discharge cowel will direct the odour and noise straight up and we make a provision within the system to install an attenuator at a later date should there be a need. The system will comprise access doors located every 1 m to enable a regular cleaning program.

I trust this meets with your approval

Regards

Jon Clough
