EXECUTIVE SUMMARY

Environmental Setting

Site Details	PRA undertaken as part of a future planning application St Thomas Place. Cheetham Hill (Grid Reference 384370E 399660N) The site is to be redeveloped for Commercial Offices with no soft landscaping.
Historical Desk Study	The site has been occupied by terraced house until the 1980 mapping when the site became vacant land.
Geology	The site is situated on Till and the Bunter Sandstone, Part of the Sherwood Sandstone Formation.
Hydrology & Hydrogeology	River Irk 225m southeast - Major Aquifer
Coal Authority Report	The Coal Authority has not identified any significant mining risk on or within the vicinity of the study site.
Landfill Search & Radon	Historical, former Reservoirs located 110m southeast and 130m southeast. Landfill site 248m east – composition of fill comprises inert industrial waste, household, special waste and liquid sludge.
Designated Sites & Sensitive Land use	No designated sites or sensitive land uses within the vicinity of the study site.
Trade Directories	Fourteen current potentially contaminative land uses are present within 250m of the study site. The nearest of which is a shutter manufactures 6m east of the study site.
Site Reconnaissance	The site was observed to comprise of a disused plot with several metal storage containers and a small stand of Japanese Knotweed.

Preliminary Risk Assessment

Potential Contaminants	Organic contaminants, inorganic contaminants, asbestos, ground gas and hazardous gas migration to the study site.
Potential Pathways	Site will follow commercial/industrial land use scenario. Dermal contact, inhalation and ingestion of contaminated soils, dust and vapours. Ground water migration, ingestion of tainted water. Migration and inhalation of ground gas and hazardous gas.
Potential Receptors	Future site users, construction workers and the planned development.
Pollutant Linkages	The preliminary contamination conceptual model for St Thomas Place has identified seven potential pollutant linkages, five of which are considered possible.
Recommendations	Based upon the available information LKA consider it necessary at this stage to undertake a contamination investigation including boreholes and installations for gas and water monitoring.

1 INTRODUCTION

1.1 Introduction

Leyden Kirby Associates Ltd (LKA) has been commissioned by Derby Street Estates Ltd (e-mail dated 2nd October 2008) to carry out a Preliminary Risk Assessment (PRA) for land at St Thomas Place, Cheetham Hill. The PRA was undertaken in support of a future planning application. The site is to be developed for offices.

According to guidance set out in PPS23[1] and CLR11[2] a PRA with a site reconnaissance is required as a minimum to ascertain if there is a potential contamination risk. In accordance with current guidance the PRA report will include a site reconnaissance, site history, geology, hydrogeology, hydrology and a landfill search (within 250m of the site boundary). Information gathered from the desk study and site reconnaissance will be used to develop a contamination conceptual model for the site, which will support the identification and assessment of any pollutant linkages. Based on the findings of the PRA an appropriate site investigation can be derived, if required once planning approval has been granted.

1.2 Background

The site is located at the junction of Stanley Street and St Thomas Place in the Cheetham Hill area of Manchester at National Grid Reference 384370E 399660N (Figure 1-1). The site is bounded by south and east by industrial/commercial premises. The site is currently vacant land.

The site is approximately 0.03ha in size (see Figure 1-2). The site is approximately level with an approximate elevation of 54m AOD. The site is to be developed into a small office block with a parking area. No soft landscaping is currently planned (Figure 1-3).

1.3 Disclaimer

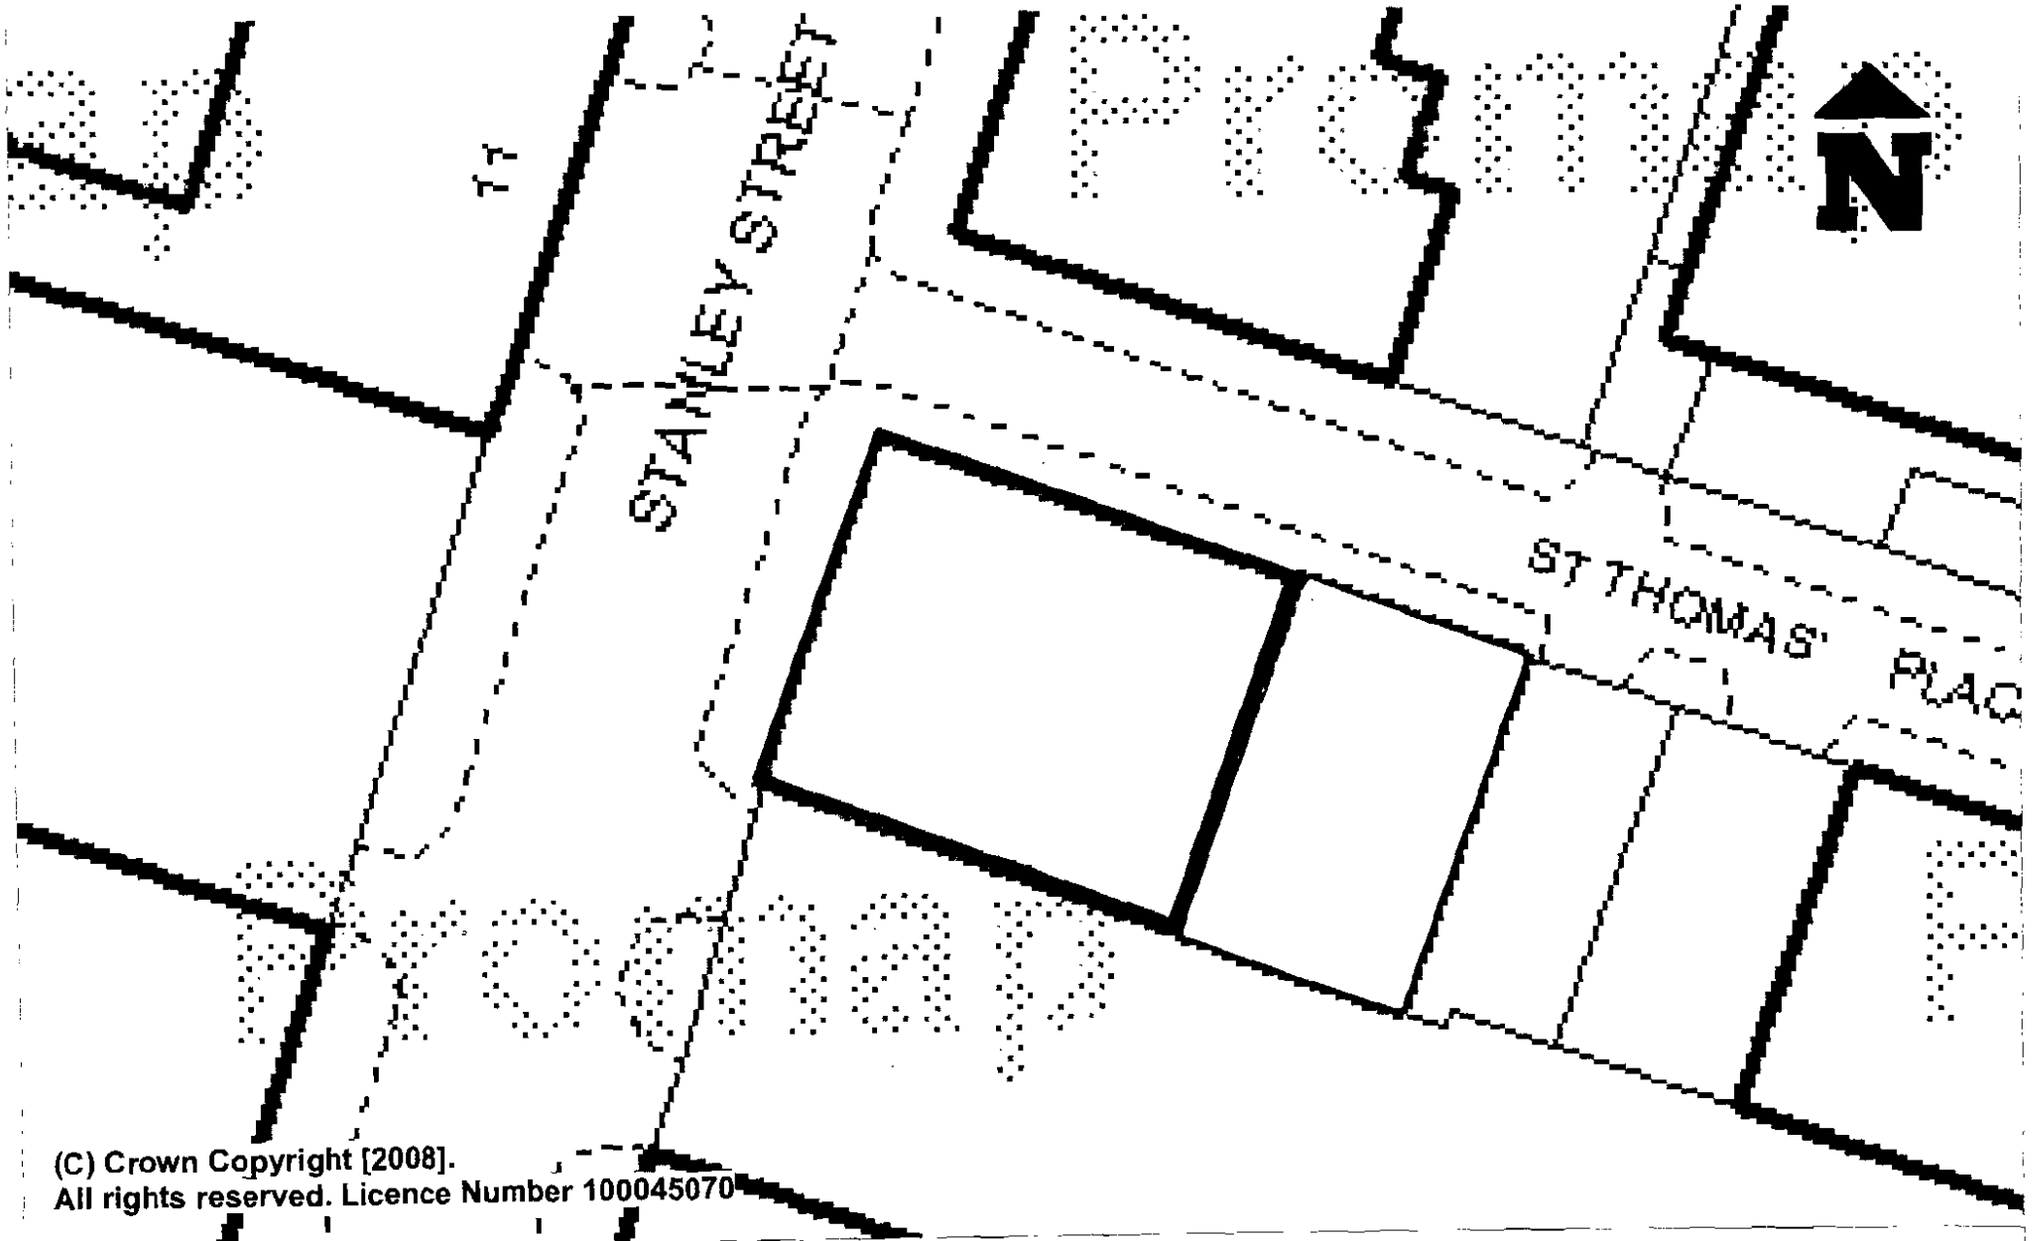

This report has been prepared by LKA who have exercised such professional skill, care and diligence as may reasonably be expected of a properly qualified and competent consultant experienced in preparing reports of a similar scope.

However, to the extent that the report is based on or relies upon information contained in records, reports or other materials provided to LKA which have not been independently produced or verified, LKA gives no warranty, representation or assurance as to the accuracy or completeness of such information.

This report is prepared solely for the benefit of Derby Street Estates Ltd. It may not be replied upon by, or submitted to a third party for their reliance for the purposes of valuation, mortgage, insurance and regulatory approval, until all invoices have been settled in full.

Those using this information in subsequent assessments or evaluations do so at their own risk.

2 SITE HISTORY

2.1 *Introduction*

In compiling the site history, LKA consulted mapping and other environmental data provided by the Landmark Information Group Ltd. Copies of relevant historical plans are provided in Appendix A and are summarised in Table 2-1 below. Notable features within 250m of the site boundary have been presented (distances will be approximate).

2.2 *Site History*

Date/range scale	On Site	Notable Features Off Site
1848 **1:10,560**	Site is undeveloped.	Stanley Street located adjacent to the northwest boundary. Terraced Houses located adjacent to the southeast and southwest boundary. Reservoirs located 110m and 130m southeast. Possible Stream located 80m west. River Irk 230m southeast.
1850 **1:1,056** ***(site location has been incorrectly marked).***	Possible structure located in the southwest of the site.	St. Thomas Place located adjacent to the northeast boundary. Rope Works located 220m west. Timber Yards located 80m south and 150m north northeast. Plaster Works located 170m south. Forge located 220m south. Soap Works located 210m south. Dye Works located 180m south. Print Works located 160m south southeast. Cotton Mill and very small Reservoir located170m south southeast. Silk & Dye Works located 120m southeast. Print and Dye Works located 120m southeast. Stream located 110m east.
1891 **1:500** **1892 / (1893)** **1:2,500** **(1894) / 1895 / (1896)** **1:10,560**	Three Terraced houses located on the site.	Railway Line located 40m southeast. Red Bank Oil Works located 105m south. Chemical Works and Chimney located 90m south. Silk & Dye Works 120m southeast has been replaced by Horrocks Dye & Print Works. Cotton Mill and very small Reservoir 170m south southeast has been redeveloped into a Chemical works. Old Clay Pits located 100m northeast and 190m northeast. Two Gasometers located 230m southeast. Timber Yard located 200m southwest. Derby Brewery located 240m west. Railway Ticket Manufactory located 220m west. Brewery located 110m northeast. Embankment located 150m southeast.

Table 2-1: Site History at St Thomas Place, Cheetham Hill. Where a composite of maps is present ( ) denotes the unused map tile/s.

Date/range scale	On Site	Notable Features Off Site
1908 **1:2,500** **1909** **1:10,560** **1923 / (1938)** **1:10,560**	No change.	Victoria Carriage Works located 120m west. Brewery 110m northeast is no longer present. Horrocks Dye & Print Works is now annotated as a Fireproof Plate Wall Works. Dye Works 170m southeast is now annotated as Disused. Timber Yard 200m southwest is no longer present. Old Clay Pits 100m northeast no longer present. Brickworks with associated chimney and clay pit located 190m north east.
(1922) / 1933 **1:2,500**	No change.	Disused Dye Works 170m southeast is no longer present. Embankments located 170m south southeast. Reservoirs 110m and 130m south southeast are no longer present. Clay pit north east extended.
1951 **1:2,500**	No change.	Marina Works located 10m north northeast. Shoe Repair Factory located 20m northeast. Print Works located 110m west. Tobacco Factory located 240m northwest. Warehouse located 220m west northwest. Saw Mill located 110m north. Aquarock Mill (Weatherproofing) located 130m east northeast. Clothing Factory located 170m north northeast. Electricity Substation located 220m north northeast. Weatherproofing Works located 110m northeast. Laundry located 120m east northeast. Brick Works and clay Pit 190m northeast is now annotated as North Street Brick Works (Disused). Two Gasometers 230m southeast are now annotated as Rochdale Gas Works and associated with two wells. Timber Yard located 200m southeast & 210m south. Engineering Works annotated 190m south southeast. Metal Foundry located 250m south southeast. Albert Oil Works located 190m southwest. Tramway 60m west is no longer present. Several of the rows of terraced houses are no longer present in the surrounding area.

Table 2-1 (Continued): Site History at St Thomas Place, Cheetham Hill. Where a composite of maps is present ( ) denotes the unused map tile/s.

Date/range scale	On Site	Notable Features Off Site
1952 **1:1,250** **1953** **1:2,500** **1956** **1:10,560**	No change.	Warehouse located 220m west northwest is now annotated as Engineering Works (Electrical). Refuse Tip located 200m northeast. Shoe Repair Works located 220m southwest. North Street Brick Works (Disused) is no longer annotated as Disused.
1958 / (1963) **1:1,250** **1959** **1:2,500** **1966** **1:2,500**	No change.	North Street Brickworks is no longer present but refuse heap and cuttings are still present. Depot located 200m southeast and 200m south.
1968 / 1970/ (1990) **1:1,250** **1972 / (1978) / (1979) / (1981)** **1:10,000**	No change.	Works located adjacent to eastern boundary. Builders Yard located 60m south. Gasometers 230m southeast are no longer present. Refuse Heap and Clay Pit no longer present. Works, Factories and Depot located on former Brickworks site 110m northeast. Depot south is now annotated as a Scrap Yard.
1975 **1:25,000**	No change.	Pond located 230m northeast.
1978 / (1984) / (1990) **1:1,250**	One of the terraced houses is no longer present.	Joinery Works located 100m southeast. Immediate surrounding areas have been developed for Warehouses and Factories.
1980 / (1982) / (1987) **1:10,000** **1989** **1:1,250**	Terraced Houses are no longer present.	No change.
1992 **1:1,250** **1993 / (1995)** **1:1,250** **(1986) / (1990) / (1993) / 1994** **1:10,000** **1999** **1:10,000**	No change.	Several of the railway sidings 140m southeast are no longer present. Works no longer annotated adjacent to the site boundary, but structure still remains.
2008 **1:10,000**	No change.	Depot 160m northeast is no longer annotated. Railway line 40m southeast is now annotated as dismantled.

Table 2-1 (Continued): Site History at St Thomas Place, Cheetham Hill. Where a composite of maps is present ( ) denotes the unused map tile/s.

3 ENVIRONMENTAL SETTING

3.1 Introduction

In compiling this Section, LKA consulted environmental information provided by the British Geological Survey (BGS) (Appendix B), Envirocheck Report (Appendix C), Natural England, the Coal Authority (Appendix D) and the Environment Agency.

3.2 Geology

BGS Sheet 85 Manchester (1:50,000 scale) indicates that the drift geology beneath the site comprises Till, which is anticipated to mainly comprise clay with lenses of sand and gravel.

BGS Sheet 85 Manchester (1:50,000 scale) indicates that the solid geology beneath the site is indicated as the Sherwood Sandstone Formation. A band of Manchester Marl is located approximately 300m northeast of the study site.

Two faults are indicated approximately 250m southwest and 250m northeast of the study site with downthrow to the northeast and southwest respectively. There are no coal seams within the vicinity of the study site. The strata is indicated to dip 5° to the south.

3.2.1 BGS Borehole Logs

LKA have obtained copies of two BGS boreholes logs within the vicinity of the study site. Copies of the borehole logs are provided in Appendix B.

Borehole reference SJ89NW34455 is located approximately 180m due west of the study site and encountered hardstanding and made ground to 0.85mbgl, underlain by a stiff silty clay to 1.3mbgl followed by a very stiff silty sandy clay to 8.25mbgl when the boreholes was terminated.

Borehole reference SJ89NW201 is located 140m northeast of the study site and encountered alluvium to 15.24mbgl followed by red sandstone and red clay to 26.82mbgl. This was underlain by red clay to 38.10mbgl and followed by sandstone to the base of the borehole at 117.04mbgl. The borehole also indicates that the total depth of drift deposits were 50ft or approximately 15m.

3.3 Hydrogeology

The Environment Agency Groundwater Vulnerability Data Sheet 17 Derbyshire & North Staffordshire (1:100,000 scale) shows the site to be underlain by a Major Aquifer (highly permeable represented by Sherwood Sandstone Formation.

Major Aquifers are highly permeable formations usually with a known or probable presence of significant fracturing. They may be highly productive and able to support large abstractions for public supply and other purposes.

As the site is within an urban area a worst-case vulnerability classification (HU) is assumed for the soil classification above the Major Aquifer. This represents soils with a high leaching potential with little ability to attenuate diffuse source pollutants and in which non-adsorbed

diffuse source pollutants and liquid discharges have the potential to move rapidly to underlying strata or to shallow groundwater.

The Envirocheck Report has identified four water abstractions licences within 500m of the site. The nearest is located 263m west of the study site, licensed to Joseph Holt Ltd and used for process waters and general cooling.

The Envirocheck Report has identified the site as within a Source Protection Zone II and Zone III.

Source Protection Zone II is defined as up to 400 days to travel to the borehole, or 25% of the total catchment area, which ever is the greatest. This travel time is the minimum amount of time that the Environment Agency think pollutants need to be diluted, reduced in strength or delayed by the time they reach the borehole[3].

Source Protection Zone III is defined as the total area needed to support removal of water from the borehole and to support any discharge from the borehole.

3.4 Hydrology

The nearest surface watercourse is the River Irk, which is located approximately 230m southeast of the study site. The Environment Agency has classed a section of the River Irk as General Quality Assessment Grade (GQA) Category E – Poor in 2000.

The Environment Agency website indicates the study site is not at risk from flooding from the River Irk.

The Envirocheck Report has not identified any surface water abstractions licences within 500m of the site.

The Envirocheck Report has identified a single consent to discharge within 250m of the site. This discharge consent is located 200m south west of the study site and is licensed to United Utilites Water Plc for the discharge of storm sewage overflow.

The Envirocheck Report has not identified any pollutant incidents within 250m of the site.

3.5 Coal Authority Report

A Coal Authority Ground Stability Report has been undertaken on the site. A summary of the results of the search show the following:

- The property **is** within the likely zone of influence of any past underground coal workings of one seam of coal at 570m to 690m depth and last worked in 1966. Any ground movement from these coal workings should have stopped by now.
- The property **is not** within the likely zone of influence of any present underground coal workings.
- There are **no** known coal mine entries within, or within 20m of the boundary of the property.

[3] http://www.environment-agency.gov.uk/maps/info/groundwater/963948/?version=1&lang=_e

3.6 *Landfill Search*

A review of landfill sites within 250m of the site boundary has been undertaken by LKA from information in the Envirocheck Report and is summarised below.

The Envirocheck Report has identified one historical landfill site within 250m of the study site.

- 250m northeast of the study site. Former brickworks and clay pit at Queens Street. The landfill site is indicated to contain industrial, commercial, household, special waste and liquid sludge. This landfill site was infilled from 1955 to 1970.

LKA have previously drilled a series of boreholes on this landfill site and have reviewed existing site investigation information submitted under the planning regime for the part of the landfill currently occupied by the Manchester Fort Shopping Centre. Figure 3-1 indicates the part of the landfill occupied by Manchester Fort and the Areas investigated by LKA.

The part of the landfill occupied by Manchester Fort has been subjected to a series of site investigations which identified landfill gas was present on this part of the landfill. LKA understand this part of the site has been treated by the placement of a perimeter in ground barrier to the full depth of the made ground (between 6 and 13m) and keyed in to the natural ground, a perimeter passively vented trench and vent stacks are also present across the car park area. Monitoring outside the trench indicates zero methane, carbon dioxide up to 2.1% and flow up to 0.4l/hr (BH5). Monitoring inside the development area has identified zero methane and carbon dioxide up to 11% (BH6) This is CS1 and indicates the protection measures are working successfully.

The boreholes drilled by LKA on the remainder of the landfill to the east encountered up to 11m of made ground at the southern end of Phase 2b as described in Planning Application 083788. The location of each of the boreholes drilled by LKA is attached. Gas monitoring identified a maximum methane concentration of 16.6% and max carbon dioxide of 13.3% (both CP6). The maximum flow encountered in this area is 1.3l/hr.

In addition a review of historical OS maps by LKA has identified four sites of potential sites infilling within 250m of the study site. These include two former reservoirs located 110m and 130m southeast of the study site (infilled by the 1933 mapping) and two former geometers located 230m southeast. No further information is currently available.

3.7 *Designated Sites and Sensitive Land Use*

A search of the Natural England Website and the Envirocheck Report has not identified any designated sites of interest or sensitive land uses within the vicinity of the study site.

3.8 *Radon*

The site is not within an area of significant Radon, with less than 1% of homes above the Action Level[4]. No Radon protection measures are necessary in the construction of new buildings and extensions.

[4] JCH Miles, D Appleton, DM Rees, BMR Green, KAM Adlam and AH Myers (2007). "Indicative Atlas of Radon in England and Wales." (HPA-RPD-033).

3.9 *Contemporary Trade Directory Entries*

The Envirocheck Report has identified fifty six businesses on the Trade Directory within 250m of the study site that may be a potential source of contamination. These include an upholstery manufactures, a container manufactures, a printers, scrap metal merchants, leather products manufactures, cosmetic manufactures, perfume suppliers, stone products manufactures, garage services, boiler services, fire/mantle piece manufactures, mirror & decorative glass manufactures, builders merchants and a roller shutter manufacturing. The nearest is a roller shutter manufacturer located 6m east of the study site.

3.10 *Additional Information*

The Envirocheck Report has identified two Local Authority Pollution Prevention and Controls within 250m of the study site. The nearest is located 205m south east and is held by Tan Yard Metal Ltd for Air Pollution Control from furnaces for the extraction of non-ferrous metal from scrap. The second is located 241m south of the study site for Avis Rent A Car Ltd. for re-spraying of road vehicles. The authorisation of this activity has been revoked.

The Envirocheck Report has identified one prosecution relating to authorised processes within 250m. This prosecution is located 131m east of the study site for 21-23 Honey Street relating to 150 cubic metres of demolition waste found deposited on land with out the relevant permissions, dated 14th October 2002.

The Envirocheck Report has identified two Substantiated Pollution Incidents located 145m east and 222m east. The former relates to a significant land impact resulting from solvent based organic chemicals, on the 27th September 2001. The latter relates to a significant land impact of inert construction waste and household waste dated 10th April 2002.

The Envirocheck Report has identified one Licensed Waste Management Facility located 250m south of the study site. The license is held by Placemix Ltd for Household, Commercial and Industrial Transfer stations. This license is currently listed as expired. However a new waste transfer site is listed 232m south east held by Placemix Ltd to handle contaminated soil, degradable commercial waste, degradable household waste, inert materials and metal waste/scrap metal.

The Envirocheck Report has identified one Fuel Station within 250m of the study site. This station is located 201m north west of the site called Cheetham Hill Filling Station. Its current status is listed as Obsolete.

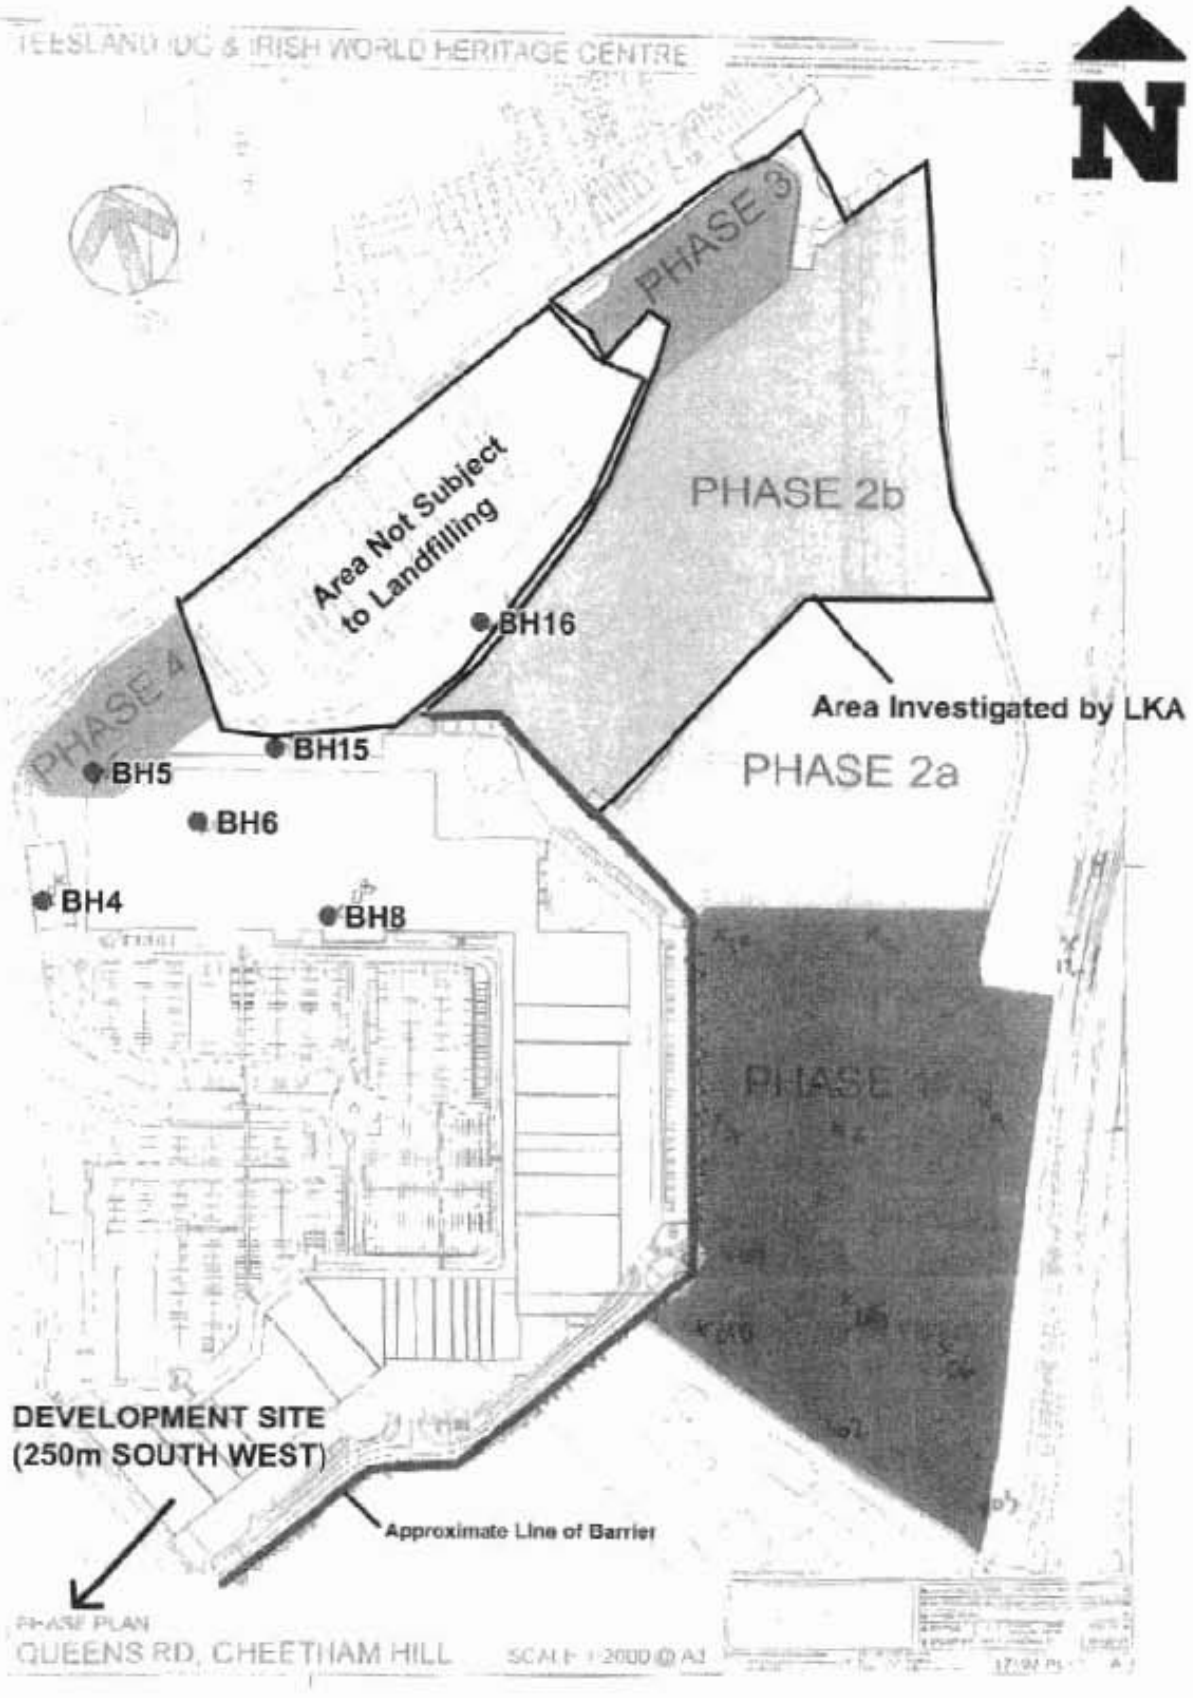

Figure 3-1: Landfill Location Plan, Queens Road, Cheetham Hill

Drawn: November 2009

LK ASSOCIATES LIMITED

4 SITE RECONNAISSANCE

A site reconnaissance of the study site area was carried out by LKA on the 24th October 2008. Photographs are provided in Appendix E.

The site was accessed from Stanley Street via the western boundary. The site is secured with a metal fence and gate. The site is currently used for the storage of skips and heras fencing for an adjacent business (Appendix E, Photographs 1 and 2). The ground cover of the site comprised brick fragments, ash, clinker, tarmac fragments and slate fragments (Appendix E, Photograph 3). A shallow excavation identified that the upper layer of made ground was underlain by sand with brick, tarmac fragments and some ash. Some litter was also present on the ground surface.

Some vegetation was present on the site which did not show any signs of stress during the reconnaissance. A small stand of Japanese Knotweed was present on the north eastern part of the site (Appendix E, Photograph 4).

The site was observed to be level and at the same elevation as the surrounding areas. The surrounding area of the study site was observed to comprise of light industrial / commercial land use.

5 PRELIMINARY CONCEPTUAL MODEL

5.1 *Introduction*

The aim of the conceptual model is to provide a preliminary assessment of the likelihood of a pollutant linkage for each potential combination of contaminant, pathway and receptor. A conceptual model can be used to make an informed decision on the contamination risks associated with the site and whether further site investigation work is required.

The Sections below are therefore divided into potential contaminant, potential pathway and potential receptor as described in CLR11[5]. The final Section provides an assessment of the potential pollutant linkages that may still be present on the site if redevelopment were to occur.

5.2 *Potential Contaminants*

The site has previously been occupied by a row of terraced houses between the 1891 to 1980 mapping, following which the site has remained vacant.

The immediate surrounding areas have been mainly developed for residential and later industrial use. Several potentially contaminative land-uses have been identified within 250m of the study site. These include several works, shoe repair factory, soap works, dye works, chemical works, gasometer, brickworks, rope works, printers, timber yard, railway line, refuse tip and metal works.

LKA consider that main risk to future site users would be associated with any made ground that may be present onsite and possibly associated with any level raising fill or sub-base material used for the previous buildings on the site.

Made ground on-site may comprise ash and clinker waste from hearths and boilers, which was historically often used as level raising material. Contaminants may include heavy metals (such as arsenic and lead) and Polycyclic Aromatic Hydrocarbons (PAHs, such as benzo(a)pyrene (B(a)P))[6]. The former building structures may also have contained Asbestos Containing Materials (ACMs). Furthermore, there may be localised hydrocarbons from vehicles on site due to spillages and leakage of fuels and oils.

The Envirocheck Report has identified one historical landfill site within 250m of the study site, located 250m northeast of the study site. A review of the historical OS mapping by LKA has identified a further four sites where landfill may be present. These areas have the potential to generate hazardous gas that may migrate to the study site.

Hazardous gas generation can also occur from made ground on the site, however this is strongly dependant upon its quantity and composition. If significant amounts of putrescible or degradable material is found on site hazardous gas generation may be possible.

Furthermore, there may be potential ground gas onsite or migrating to the site from the underlying worked coal seams. Carbon dioxide and methane are therefore both considered as potential hazards for this site

[5] Defra (2004). "Model Procedures for the Management of Land Contamination." R&D Publication CLR 11
[6] Defra (2002). "Potential Contaminants for the Assessment of Land." R&D Publication CLR 8

5.3 *Potential Pathways*

Principal potential pathways associated with human health from soil contamination are ingestion, dermal and inhalation. The current UK technical report document[7] recognises ten such pathways comprising four ingestion, two dermal and four inhalation. These are listed as follows:

- Ingestion of soil
- Ingestion of soil-derived indoor dust
- Ingestion of contaminated vegetables
- Ingestion of soil attached to vegetables
- Dermal contact with soil
- Dermal contact with soil-derived indoor dust
- Inhalation of soil-derived outdoor dust
- Inhalation of soil-derived indoor dust
- Inhalation of vapours outside
- Inhalation of vapours inside

The proposed end-use follows a standard conceptual model of commercial/industrial. For this land use scenario eight of the pathways will need to be considered (Ingestion of contaminated vegetables and Ingestion of soil attached to vegetables are excluded).

Surface water and groundwater are principal mechanisms for the migration of contaminants, with rainwater infiltrating through contaminated material and contamination possibly going into solution. Contaminated water may then find preferential pathways to surface waters and underlying Major Aquifer.

Culverts, ditches, drains, service drains may provide preferential pathways off site. None were noted from the desk study and site reconnaissance.

Solid and drift geology has the potential to impede or provide preferential pathways for contaminants onto or off site.

The site is situated on Sandstone, depending on the pore space and bedding orientation, this may act as a pathway for contaminants onto or off-site.

There are two known geological faults within 250m of the study site. These are not considered a viable pathway due to their distance from the study site.

5.4 *Potential Receptors*

Potential receptors with respect to human health and hazards present on the site include users of the proposed development and future site construction workers, maintenance worker and landscaped areas. Depending on the nature and concentration of the potential contaminants, the underlying Major Aquifer may also be considered as potential receptors along with building materials and services.

The River Irk is located 230m southeast is not considered a viable receptor due to its distance from the study site and the environmental setting.

5.5 *Preliminary Contamination Conceptual Model*

The preliminary contamination conceptual model for St Thomas Place is illustrated in Table 5-1 below and has identified seven potential generic pollutant linkages, four of which are considered possible at this stage.

[7] EA (2008). "Updated Technical Background to the CLEA Model." Science Report – SC050021/SR3.

Pollutant linkage 3 and 5 (methane) is considered likely possible given the age, nature and distance of the identified areas of infilling to the study site. In addition geological mapping indicates the drift geology in the area between the landfill site and former reservoirs and the development site is Till which will offer a level of protection against gas ingress into the development site. Boreholes in the vicinity of the study site indicate that the drift deposits extend are up to 15m thick. Furthermore a substantial band of Manchester Marl (impervious strata) is present between the landfill and the study site which will offer a further level of protection against any gas ingress to the study site via any underlying solid geology. LKA also note that part of the landfill site has been installed with protection measures which have been proven to be working adequately.

Given the depth of the underlying worked coal seams and the thickness of the drift deposits, LKA do not consider significant migration of hazardous gas onto the site to be likely. LKA observed a thin layer of made ground on site comprising sand, brick, ash and tarmac, however LKA do not consider this material to be as a significant source of hazardous gas.

Pollutant linkage 4 is not considered possible given that the depth of Till deposits in the area of the study site are indicated to be approximately 15m in thickness. Furthermore the proposed development allows for the entire site to be covered by the building or hardstanding which will impede infiltration and afford further protection to the aquifer. As such LKA consider that the risk to the underlying Major Aquifer is low.

Pollutant linkage 7 is not considered possible as no areas of soft landscaping are planned. Each linkage is discussed below along with an assessment of the likelihood of each linkage considering the available data and the nature of the development. This conceptual model is based upon contaminant-pathway-receptor pollutant linkages, on the premise that if there is no pollutant linkage then there will be no risk to the receptor[8].

[8] Defra (2004). "Model Procedures for the Management of Land Contamination." R&D Publication CLR 11

Pollutant Linkage No.	Contaminant					Pathway	Receptor
	ACM	Gases		Contaminants			
		Hazardous	Ground	Organic	Inorganic		
1	?	x	x	?	?	-Dermal Contact. -Ingestion of soils. -Inhalation of contaminated soil and dust.	-Future site construction workers. -Nearby offsite receptor (windblown dust).
2	x	x	x	?	x	-Inhalation of vapours. -Vapour migration through porous lenses within the underlying Till.	-Future site construction workers. -Future site users.

Table 5-1 Contamination conceptual model for the St Thomas Place, Cheetham Hill.
(Key: ? – pollutant linkage possible; x – pollutant linkage unlikely)

Possible linkages include:-

Pollutant linkage 1 refers to the potential asbestos, heavy metals and organic contaminants, such as PAHs and heavy end petroleum hydrocarbons coming into direct contact with future site construction works and offsite receptors (windblown dust). This is considered possible for construction workers who may come into contact with the soils. The future site users are not considered potential receptors given there are no proposed areas of soft landscaping.

Potential pollutant linkage 2 refers to possible inhalation of vapours affecting the future site users and future site construction workers from potential hydrocarbons onsite. This linkage is considered possible given the unknown composition of made ground and potential spills and leaks of hydrocarbons from vehicles on site.

Potential pollutant linkage 5 refers to the possible deleterious effects that sulphate may have on building materials such as concrete, water pipes and building structures. Therefore, given the unknown composition of made ground this pollutant linkage is also considered possible.

Potential pollutant linkage 6 refers to the possible contaminants permeating potable water pipes and consumption of the tainted water supply by the future site users . In addition, there may be a possible risk to pipe installers and pipe maintenance workers. Given the likely presence of made ground on site and likely contaminants this linkage is also considered possible.

6 CONCLUSIONS AND RECOMMENDATIONS

6.1 Conclusions

The site has previously been occupied by a row of terraced houses between 1891 to 1980 mapping, following which the site has remained vacant.

LKA consider that main risk to future site construction workers would be associated with any made ground that may be present onsite and possibly associated with any level raising fill or sub-base material used for the previous buildings on the site. The future site users are not considered to be at risk from direct contact given that no areas of soft landscaping are proposed.

Contaminants may include heavy metals and Polycyclic Aromatic Hydrocarbons (PAHs, such as benzo(a)pyrene. The former building structures may also have contained Asbestos Containing Materials (ACMs). Furthermore, there may be localised hydrocarbons from vehicles on site due to spillages and leakage of fuels and oils.

Carbon dioxide and methane are also considered potential contaminants for the site given the identified infilled features within 250m of the study site and the unknown depth and composition of made ground on site. However given their nature and distance from the site, thickness of drift deposits, known protection measures installed in part of the landfill site and no putrescible material observed on site, LKA consider significant migration of hazardous gas onto the site or significant generation of gas on site to be unlikely.

LKA consider that migration of contaminants to the underlying Major Aquifer is. also considered to be unlikely given the thickness of the intervening Till and given that the site is proposed to be covered by the building and hardstanding which will reduce infiltration.

Radon was not identified from the desk study and therefore no special precautions are required to protect against radon.

The Coal Authority Report has identified coal workings in one seam of coal between 570 to 690m, last worked in 1966. Any ground movement associated with these workings should have ceased by now.

The preliminary contamination conceptual model for St Thomas Place, Cheetham Hill as illustrated in Table 5-1 has identified seven potential generic pollutant linkages, four of which are considered possible at this stage.

6.2 Recommendations

Given the information provided above LKA consider it unnecessary at this stage to undertake an extensive contamination investigation. However a minimum of a watching brief should be maintained during site clearance and development works for any likely contaminative made ground, such as significant amounts of ash and clinker; any unusual ground conditions and any visual and / or olfactory evidence of hydrocarbon contamination. The watching brief should be carried out by a suitably qualified person.

If evidence of significant amounts of made ground and/or visual and olfactory evidence of contaminants are identified, then near surface sampling will likely be required to

characterise the material and recommendations for appropriate remediation undertaken, if required. Samples should be collected in sufficient quantity and analysed for a suitable suite of determinands to demonstrably characterise the site.

Should any significant quantities of made ground be encountered during the site works, LKA would recommend that this information is reported to the Local Authority and to LKA for further assessment.

In the absence of any areas of soft landscaping LKA consider that the future site users are not a viable receptor with respect to direct contact with any contaminants. As such LKA consider that the future site construction workers are at most risk from coming into direct contact with any contaminated soil at the site.

LKA consider that the risk to the future construction works can be mitigated through the implementation of health and safety precautions as outlined in guidance provided in HSG 66[9]. In working with, removing or treating any contaminating material it is important that any potential risks associated with the actual site works are mitigated by good environmental management of the site during the remedial phases. Standard health and safety precautions should be adopted by all workers involved with site enabling and construction works. These should include as a minimum:

- Ensuring wind blow is minimised by dampening down exposed surfaces.
- Ensuring all vehicles leaving the site are clean and if necessary have used a wheel wash.
- Limiting unauthorised access to the site to prevent exposure to contaminated materials.
- The provision and use of washing facilities for site staff, requirement for high standards of personal hygiene to be adopted by all site staff, particularly before and during meals.

LKA would recommend that a copy of this report is forwarded to the Local Authority for the approval of the above recommendations before the commencement of any works on the site.

It should be noted that the Local Authority could request that a site investigation, including soil sampling and gas monitoring be undertaken.

6.3 Further Considerations

In addition Japanese Knotweed has been identified on the study site and can present a risk to future site buildings. The Environment Agency has stressed the importance of preventing the further spread of Japanese Knotweed and insists that these areas be treated properly in accordance with statutory requirements.

Under Schedule 9 of the Wildlife and Countryside Act (WCA) 1981, it is an offence to spread Japanese Knotweed. In addition, the Environment Act (EPA) 1990 states that any material contaminated with Japanese Knotweed must be classified as controlled waste, to which the duty of care applies. In other words, an offence under the WCA could face criminal prosecution and an infringement of the EPA could result in enforcement action being taken by the Environment Agency, which subsequently could lead to an unlimited fine.

[9] HSE (1991). Protection of workers and general public during development of contaminated land. HMSO. London

LKA have a designated Japanese Knotweed Management Department and would be to happy to advise you on the appropriate steps to take in order to suitably treat the knotweed.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.

In the attached datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

	Authority:	Environment Agency, North West Region				
	Pollutant:	Oils - Unknown				
	Note:	River Irwell				
	Incident Date:	4th July 1995				
	Incident Reference:	95611639				
	Catchment Area:	Irwell				
	Receiving Water:	Not Given				
	Cause of Incident:	Other Incident/Unknown				
	Incident Severity:	Category 3 - Minor Incident				
	Positional Accuracy:	Located by supplier to within 100m				
	Prosecutions Relating to Authorised Processes					
52	Location:	21-23 Honey Street, Cheetham Hill, Manchester, M8 8rg	A13SE (E)	131	1	384510 399656
	Prosecution Text:	150 Cubic Metres Of Demolition Waste Found Depositedon Land Without Wml				
	Prosecution Act:	Epa90 S33(1)(B) & S33(6)				
	Hearing Date:	14th October 2002				
	Verdict:	Guilty				
	Fine:	8000				
	Costs:	875				
	Positional Accuracy:	Manually positioned to the address or location				
	Registered Radioactive Substances					
53	Name:	Brooke Edgley Specialist Technical Services Ltd	A8NE (S)	624	1	384457 399030
	Location:	Unit 4, Angel Industrial Estate, Angel Street, MANCHESTER, M4 4BQ				
	Authority:	Environment Agency, North West Region				
	Permit Reference:	BI9880				
	Dated:	7th August 2000				
	Process Type:	Authorisation under S13 RSA for the disposal of Radioactive waste (was RSA60 S7)				
	Description:	Authorisation under RSA in respect of a registration under S7 when Technetium 99M is used being =< 10 gigabecquerels				
	Status:	**Authorisetion either revoked or cancelledCancelled**				
	Positional Accuracy:	Manually positioned to the address or location				
	Registered Radioactive Substances					
54	Name:	Umist	A9NW (SE)	927	1	385022 398985
	Location:	PO Box 88, MANCHESTER, Lancashire, M60 1QD				
	Authority:	Environment Agency, North West Region				
	Permit Reference:	AC8886				
	Dated:	31st March 1991				
	Process Type:	Registration under S7 RSA for the keeping and use of Radioactive materials (was RSA60 S1)				
	Description:	Registration under the Act of an open source which is also the subject of an authorisation				
	Status:	**Authorisation superseded by a substantial or non substantial variationSuperseded**				
	Positional Accuracy:	Automatically positioned to the address

	Groundwater Vulnerability					
	Geological Classification:	Major Aquifer (Highly permeable) - These are highly permeable formations usually with a known or probable presence of significant fracturing. They may be highly productive and able to support large abstractions for public water supply and other purposes	A13NE (NE)	0	1	384560 399738
	Soil Classification:	Soils of High Leaching Potential (U) - Soil information for restored mineral workings and urban areas is based on fewer observations than elsewhere. A worst case vulnerability classification (H) assumed, until proved otherwise				
	Map Sheet:	Sheet 17 Derbyshire & North Staffordshire				
	Scale:	1:100,000				
	Drift Deposits					
	Drift Deposit:	Low permeability drift deposits occuring at the surface and overlying Major and Minor Aquifers are head, clay-with-flints, brickearth, peat, river terrace deposits and marine and estuarine alluvium	A13NE (NE)	0	1	384562 399746

This report is for the property described in the address below and the attached plan.

Coal and Brine Report

Site Off, St Thomas Place, Manchester, Lancashire

This report is based on and limited to the records held by, the Coal Authority, and the Cheshire Brine Subsidence Compensation Board's records, at the time we answer the search.

Coal mining	Yes
Brine extraction	No

Information from the Coal Authority

Underground Coal Mining

Past

The property is in the likely zone of influence from workings in 1 seam of coal at 570m to 690m depth, and last worked in 1966.

Any ground movement from these coal workings should have stopped by now.

Present

The property is not in the likely zone of influence of any present underground coal workings.

Future

The property is not in an area for which the Coal Authority is determining whether to grant a licence to remove coal using underground methods.

The property is not in an area for which a licence has been granted to remove coal using underground methods.

All rights reserved You must not reproduce, store or transmit any part of this document unless you have our written permission.

© The Coal Authority

The property is not in an area that is likely to be affected at the surface from any planned future workings.

However reserves of coal exist in the local area which could be worked at some time in the future.

No notice of the risk of the land being affected by subsidence has been given under section 46 of the Coal Mining Subsidence Act 1991.

Mine entries

There are no known coal mine entries within, or within 20 metres of, the boundary of the property.

Coal-mining geology

At the surface, there are no known faults or other lines of weakness due to coal mining that have made the property unstable.

Opencast Coal Mining

Past

The property is not within the boundary of an opencast site from which coal has been removed by opencast methods.

Present

The property does not lie within 200 metres of the boundary of an opencast site from which coal is being removed by opencast methods.

Future

The property is not within 800 metres of the boundary of an opencast site for which the Coal Authority is determining whether to grant a licence to remove coal by opencast methods.

The property is not within 800 metres of the boundary of an opencast site for which a licence to remove coal by opencast methods has been granted.

Coal-mining subsidence

The Coal Authority has not received a damage notice or claim for the property since 1 January 1984. There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority has not received a request to carry out preventive work before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

There is no record of a mine gas emission requiring action by the Coal Authority within the boundary of the property.

Hazards related to coal mining

The property has not been subject to remedial works, by or on behalf of the Authority, under its Emergency Surface Hazard Call Out procedures.

Withdrawal of Support

The property is in an area for which a notice of entitlement to withdraw support was published in 1963.

The property is not in an area for which a notice has been given under section 41 of the Coal Industry Act 1994, revoking the entitlement to withdraw support.

Working Facilities Orders

The property is not in an area for which an Order has been made under the provisions of the Mines (Working Facilities and Support) Acts 1923 and 1966 or any statutory modification or amendment thereof.

Payments to Owners of Former Copyhold Land

The property is not in an area for which a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Information from the Cheshire Brine Subsidence Compensation Board

The property lies outside the Cheshire Brine Compensation District.

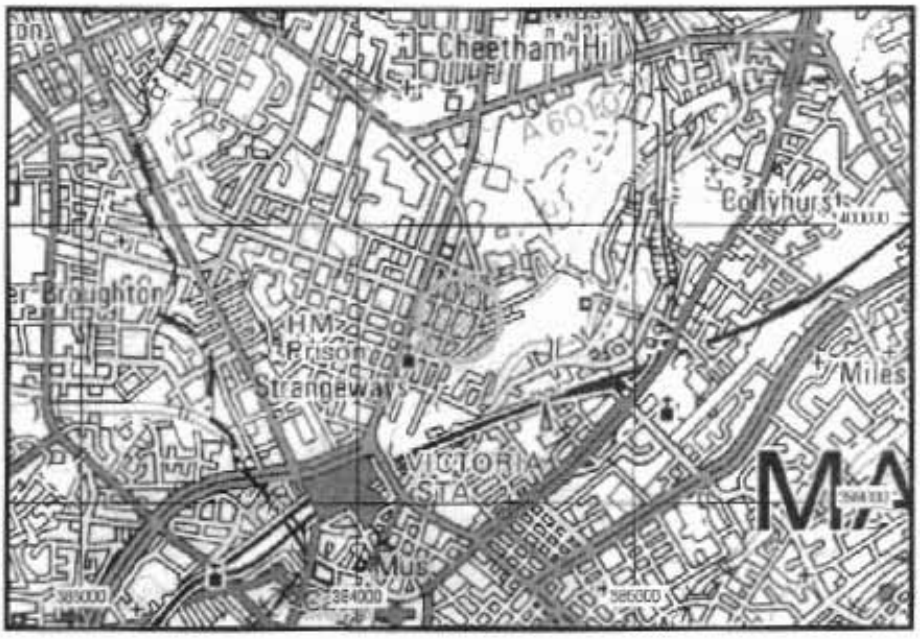

Additional remarks

This report is prepared in accordance with the Law Society's Guidance Notes 2006, the User Guide 2006 and the Coal Authority and Cheshire Brine Board's Terms and Conditions 2006. The report is compliant with Home Information Pack requirements.
