Sub: Change of Use of Ground Floor from Shop to Take Away and other Internal Alterations at Ist Floor

Location: 184 Church Lane Manchester M9 4LJ

Dear Sir / Madam

I have attached the amended side and rear elevation drawings as well as schematic diagram of flue extract. This diagram is just to show the flow diagram. Any drawing submitted by the manufacturer of extraction unit will super cede it.
The applicant has asked me to explain that there will be only one gas flue extraction unit, at rear with av. height 5500, shown in the rear elevation. The rear kitchen will be used rarely and will have a small fan 300 dia. or less (recommended by the kitchen extraction unit manufacturer) for extraction of gases. If there is still any ambiguity in the drawings, give me some appointment to understand or mark it on drawing and send me back on my email / post address.

Regards

Sincerely Yours

M. Amjad
