5188/JAH

Design and Access Statement
for
Proposed Entrance Canopy, MANCAT Moston Campus,

Design

The proposed canopy will provide shelter to the main entrance doors of the five storey college building.

The canopy is to be formed of a fabricated white PVC coated polyester architectural membrane. It will be supported on structural steelwork painted white (RAL 9010) and also attached to the face of the building at first floor level. The steel posts will be supported on foundations set within the existing planter area immediately in front of the entrance porch.

Access

The construction of the canopy will not alter the existing access ramp or steps to the main entrance of the building. It will however provide shelter, in accordance with the Building Regulations, to those entering or leaving the existing porch doors by either of these routes.
