

Bat Emergence and Re-Entry Surveys (BERS)

Survey site:

Former Electrium Sales Ltd Site, 1934 Sharston Road, Wythenshawe, Manchester M22 4RA

Client:

Kier Sharston Limited

Report date:

11/06/2025

Project:

This report is prepared to inform a planning application with Manchester City Council for the proposal described as:
“The demolition of the on-site building complex and erection of a new building complex.”

This report is supplementary to the Preliminary Roost Assessment report completed by Arbtech Consulting Ltd (2025).

BERS survey methodology and legislation can be found in the Arbtech Supplement: [BERS Methodology and Legislation - 2024.](#)

This report is an addendum to and must be read in conjunction with the Preliminary Roost Assessment completed by Arbtech Consulting Limited (2025) for the same site address. This table may include further work you will need to commission (if any) to obtain planning permission or comply with legislation for other consent. All clients are expected to read and understand this section, or to contact the consultant for advice.

Executive Summary

Report Validity: This report is valid for up to 18 months for the purposes of planning applications.

The surveys undertaken to date have indicated that there is a sufficiently low risk of bat roosts being present on site, and works can proceed without any further survey or licence requirements.

Background

PRA – A Preliminary Roost Assessment was conducted by Arbtech Consulting Ltd, January 2025, whereby all building sections were subject to internal and external survey. A range of potential roosting features (PRFs) were recorded across the building complex. The building complex as a whole was assessed as offering Moderate value for roosting bats.

Number of buildings on site – 1 building complex

Number of buildings surveyed – 1 building complex

The full building complex will be subject to demolition as part of the proposals.

Proposed development

Current use of building – Commercial – Disused

Proposed use of building – N/A – Full demolition.

Structural changes to building – Full demolition

Type of permission required – Full planning permission.

The site surveys were designed and managed by Leo Plevin BSc (Hons), MSc MCIEEM Principal Ecologist (L2 Bat Licenced)

See surveyor locations in the BERS plans in Appendix 1, the site was surveyed by 14 surveyors plus an unmanned IR on Visit 1 and 13 surveyors plus an unmanned IR on Visit 2. The decrease in surveyor number was to avoid doubling up on roof elevations with limited PRFs.

Limitations

Security lighting is present across all building elevations which may limited visibility for surveyors and IR cameras, however all building elevations and associated PRFs were visible and all aspects of the site accessible for survey, this limitation is not considered significant.

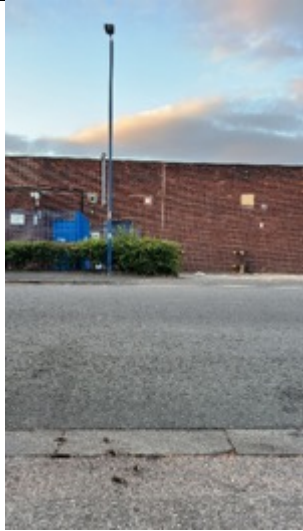

Rear roof sections of the building complex making up the centre of the site were not visible from ground level. This limitation was not considered significant due to a lack of PRFs observed in these areas during the PRA. Surveyor 13 was positioned to record any activity from these areas during Visit 1. Additionally, the position of Surveyor 13 was moved for Visit 2 to view the rear sections of all buildings from a flat roof section of rooftop on Visit 2. Surveyors were positioned on all external aspects of the building complex and should any activity have come from the central portion of the site of either survey, this would have been recorded.

Dusk Emergence Survey 2					
Building Complex					
<i>Building inspection prior to survey</i>	No internal PRFs were observed during the PRA surveys, however an updated internal inspection of the building was conducted immediately prior to Visit 2. Following the internal inspection, access was available to an additional area of the site, which provided a view of all roof elevations within the central portion of the site (Position 13). The building complex was considered to have not materially changed since the PRA was undertaken. No evidence of bats, access points or suitability for bats internally was observed.				
<i>Surveyor and position</i>	Surveyor Position	Name	BERS Experience / Bat Licence	BCT Competency	Elevation

<i>IR position 7</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	

<i>Surveyor 8</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 8</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	
<i>Surveyor 9</i>	Not required on V2 – P8 covering aspect	N/A
<i>IR position 9</i>	Not required on V2 – P8 covering aspect	N/A

<i>Surveyor 10</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 10</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	

<i>Surveyor 11</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 11</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	

<i>Surveyor 12</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 12</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	

<i>Surveyor 13</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 13</i>	Camera position: observing southern elevation Emergences observed: N No activity observed	

<i>Surveyor 14</i>	Emergences observed - None Summary of general activity: Noctule fly over at 21:31 and 21:34 heard and not seen.	
<i>IR position 14</i>	Camera position: observing western elevation Emergences observed: N No activity observed	

<i>IR position 15</i>	Camera position: observing western elevation Emergences observed: N No activity observed	
Conclusions, Impacts and Recommendations		
<i>Survey Results Summary</i>	No emergences or re-entries of bats from or into the building were observed during the surveys or recordings. General bat activity on site: Bat activity on site was limited to a single common pipistrelle pass on visit 1 and noctule commuting passes on visit 2. The site offers limited suitable habitat for foraging and commuting bats and the level of lighting across the site, is likely to discourage roosting, foraging and commuting.	

	Hibernation suitability - Negligible – no suitable habitat at all – no further surveys required
<i>Impact Assessment</i>	No impacts foreseen to roosting, foraging or commuting bats. Only limited activity from common and widespread species were identified on site, therefore no impacts at population level are anticipated. Works at the site are unlikely to increase lighting across the site above current levels.
<i>Recommendations</i>	Works can proceed without the need for any further requirements. In the unlikely even bats are found, work must stop and a suitably qualified ecologist will be contacted for further advice.
<i>Enhancements</i>	The installation of two integrated bat boxes at the site will provide additional roosting habitat for bats. The bat boxes will be integrated within the fabric of the new building proposed Bat boxes should be positioned 3-5m above ground level (at the eaves of buildings), facing in a south or south-westerly direction, with a clear flight path to and from the entrance, away from and unlit by artificial light, and not above any windows. Suitable boxes include but are not limited to Vivaro Pro Built-in Woodstone Bat Box. Additional planting of native species trees, scrub and wildflowers across the site in areas away from artificial light, would likely increase the suitability of the site for roosting bats.
