

The ventilation louvre on the elevation at **Scofields** on Little Quay St as illustrated above is fully exposed to view. The new detail proposed for Quay St will have a decorative screen in front of the louvre to increase the heritage aesthetic. This will match the RAL of the louvre and plenum box to the rear rendering them invisible to the passer by.

External view of decorative screen location and existing louvres on the building.

Location of the new decorative screen and window on Quay St.

Elevation to show the new heritage screen and window. The pattern has been designed to limit visibility through it and its location sits high above the average sight line – illustration shows person 1.8m tall

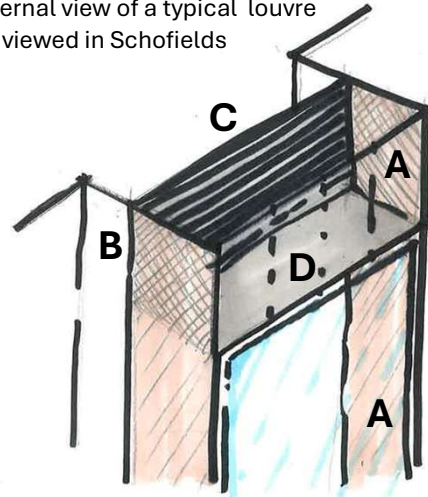

Internal view of louvre (C) sitting within the internal margins of the stonework (A)
The louvre will present exactly as the one that can be viewed at **Schofields** next door (E).
Louvre and plenum box to match the RAL of the external decorative screen (D) and plenum box
Internal wall return in plaster board (B)

Section and internal view of the louvre screen with finishes.

Internal view of a typical louvre as viewed in Schofields

Internal view showing louvre sitting within the margin of the existing stonework

Sketch detail of the louvre and decorative screen

A – Existing stone soffit and sides of the plenum box to remain untouched

B – Extent of the plenum box to be within the confines of the stone surround – decorated plaster return internally- see section

C – Louvre and plenum return to the screen to be the same dark bronze RAL of the decorative external screen creating a shadow box behind
D – External decorative screen and mesh in line with the glazing frame.

Note – With the plenum acting as a shadow box the only thing that will be visualised from outside is the decorative screen
