

Waste Management Plan

The Curling Club at New Jackson, Winter 2025

Overview

The Curling Club at New Jackson is a temporary winter leisure installation comprising a covered ice-free curling rink and bar. This strategy supports the planning application for the temporary structure, outlining how waste will be responsibly managed during the operating period in compliance with Manchester City Council's requirements.

Estimated Volumes and Types of Waste

Waste Type	Estimated Weekly Volume	Description / Source
General waste	700–900 litres	Bar wipes, used napkins, and non-recyclable packaging
Dry mixed recycling	600 litres	Cardboard sleeves, plastics, and cans from bar operations
Glass	880 litres	Bottles and jars from bar service
Food / organic waste	80 litres	Snack prep and customer snack waste

Volumes are based on data from The Curling Club's previous city-centre bar activations in comparable UK locations.

Internal and External Waste Storage

Internal storage:

- The bar area will contain 120L internal bins for general waste, recycling, and glass.
- Waste will be separated at source and transferred daily to the external compound by staff.

External storage:

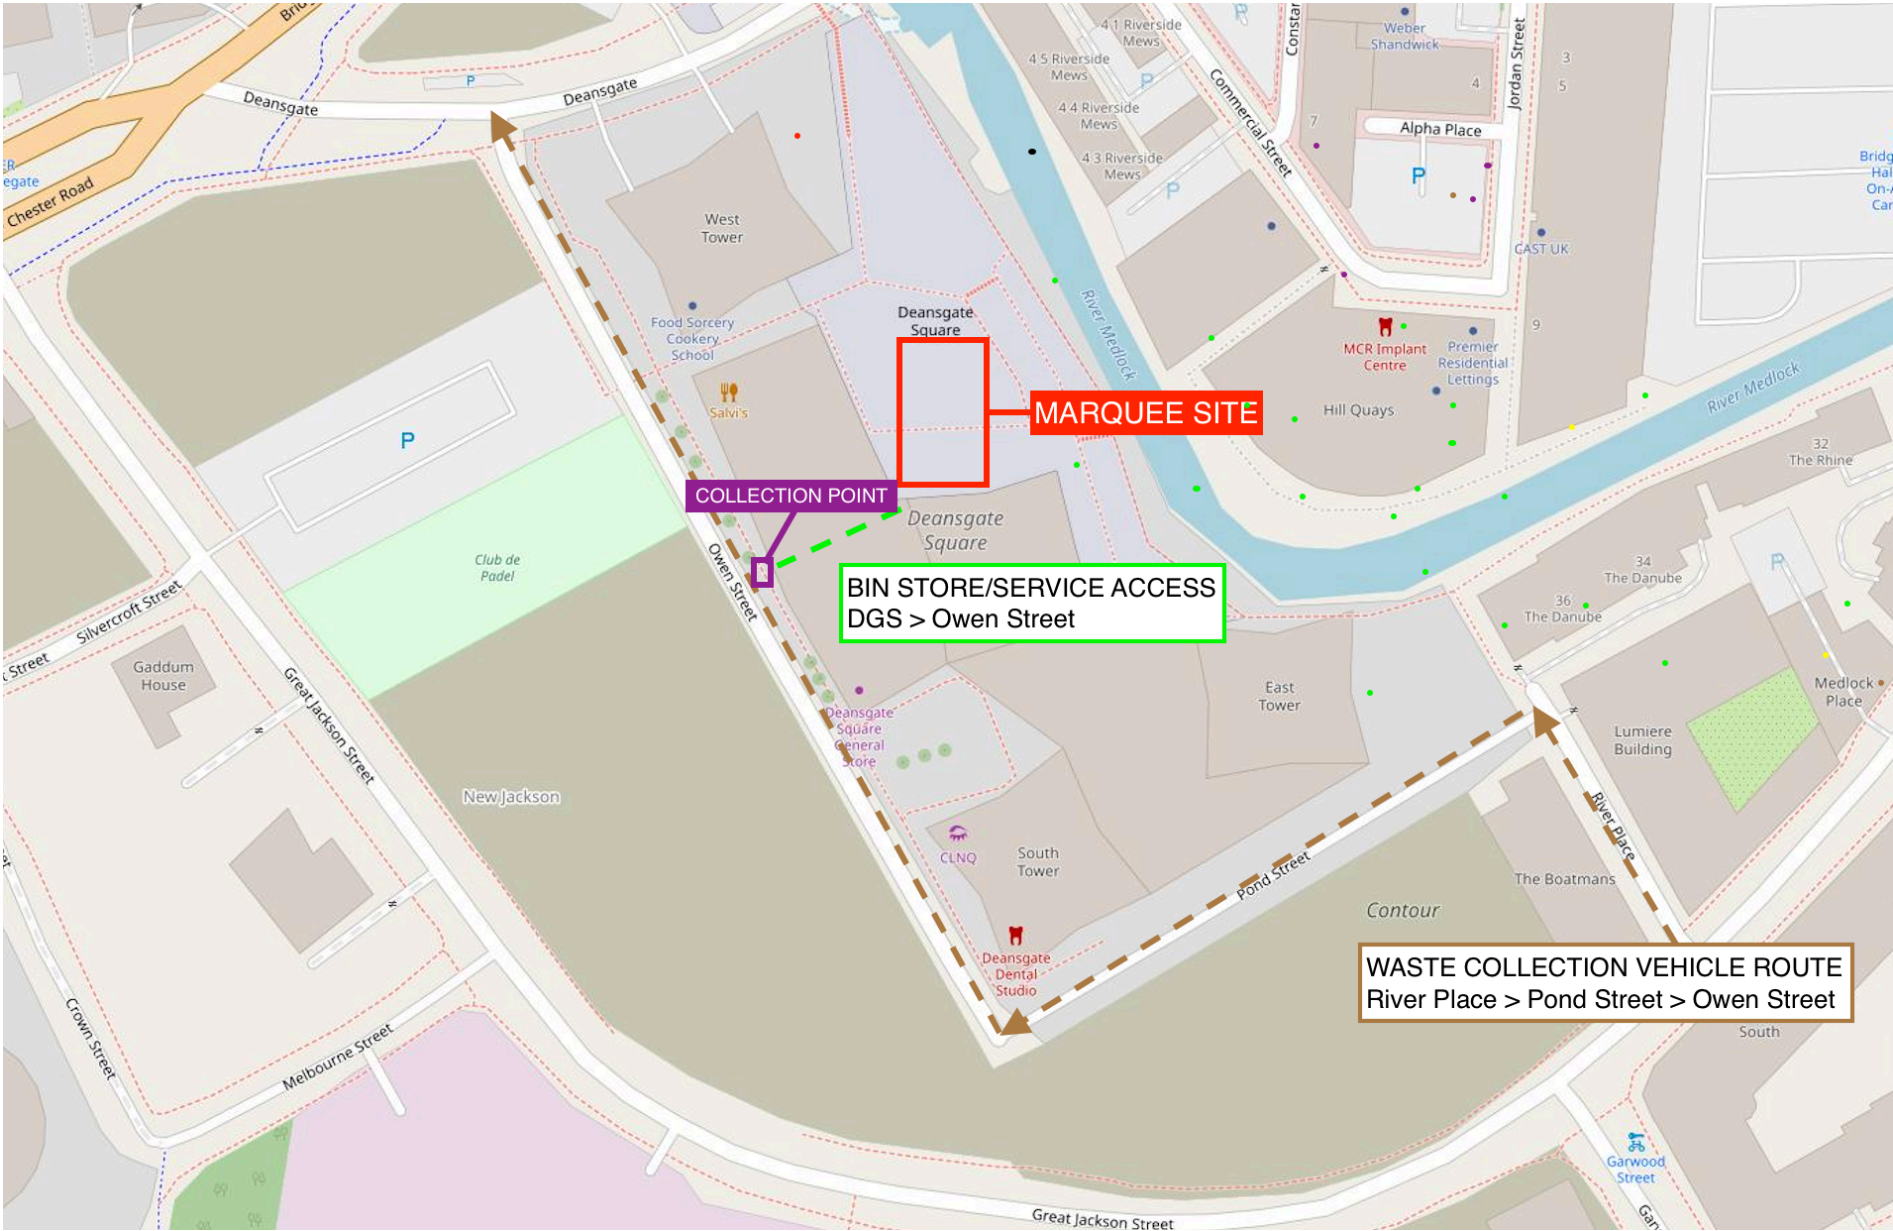

- An area of the commercial bin store at Deansgate Square has been allocated to The Curling Club for their use during their temporary residency.
- The commercial bin store is locked and accessible only to designated commercial bin contractors.

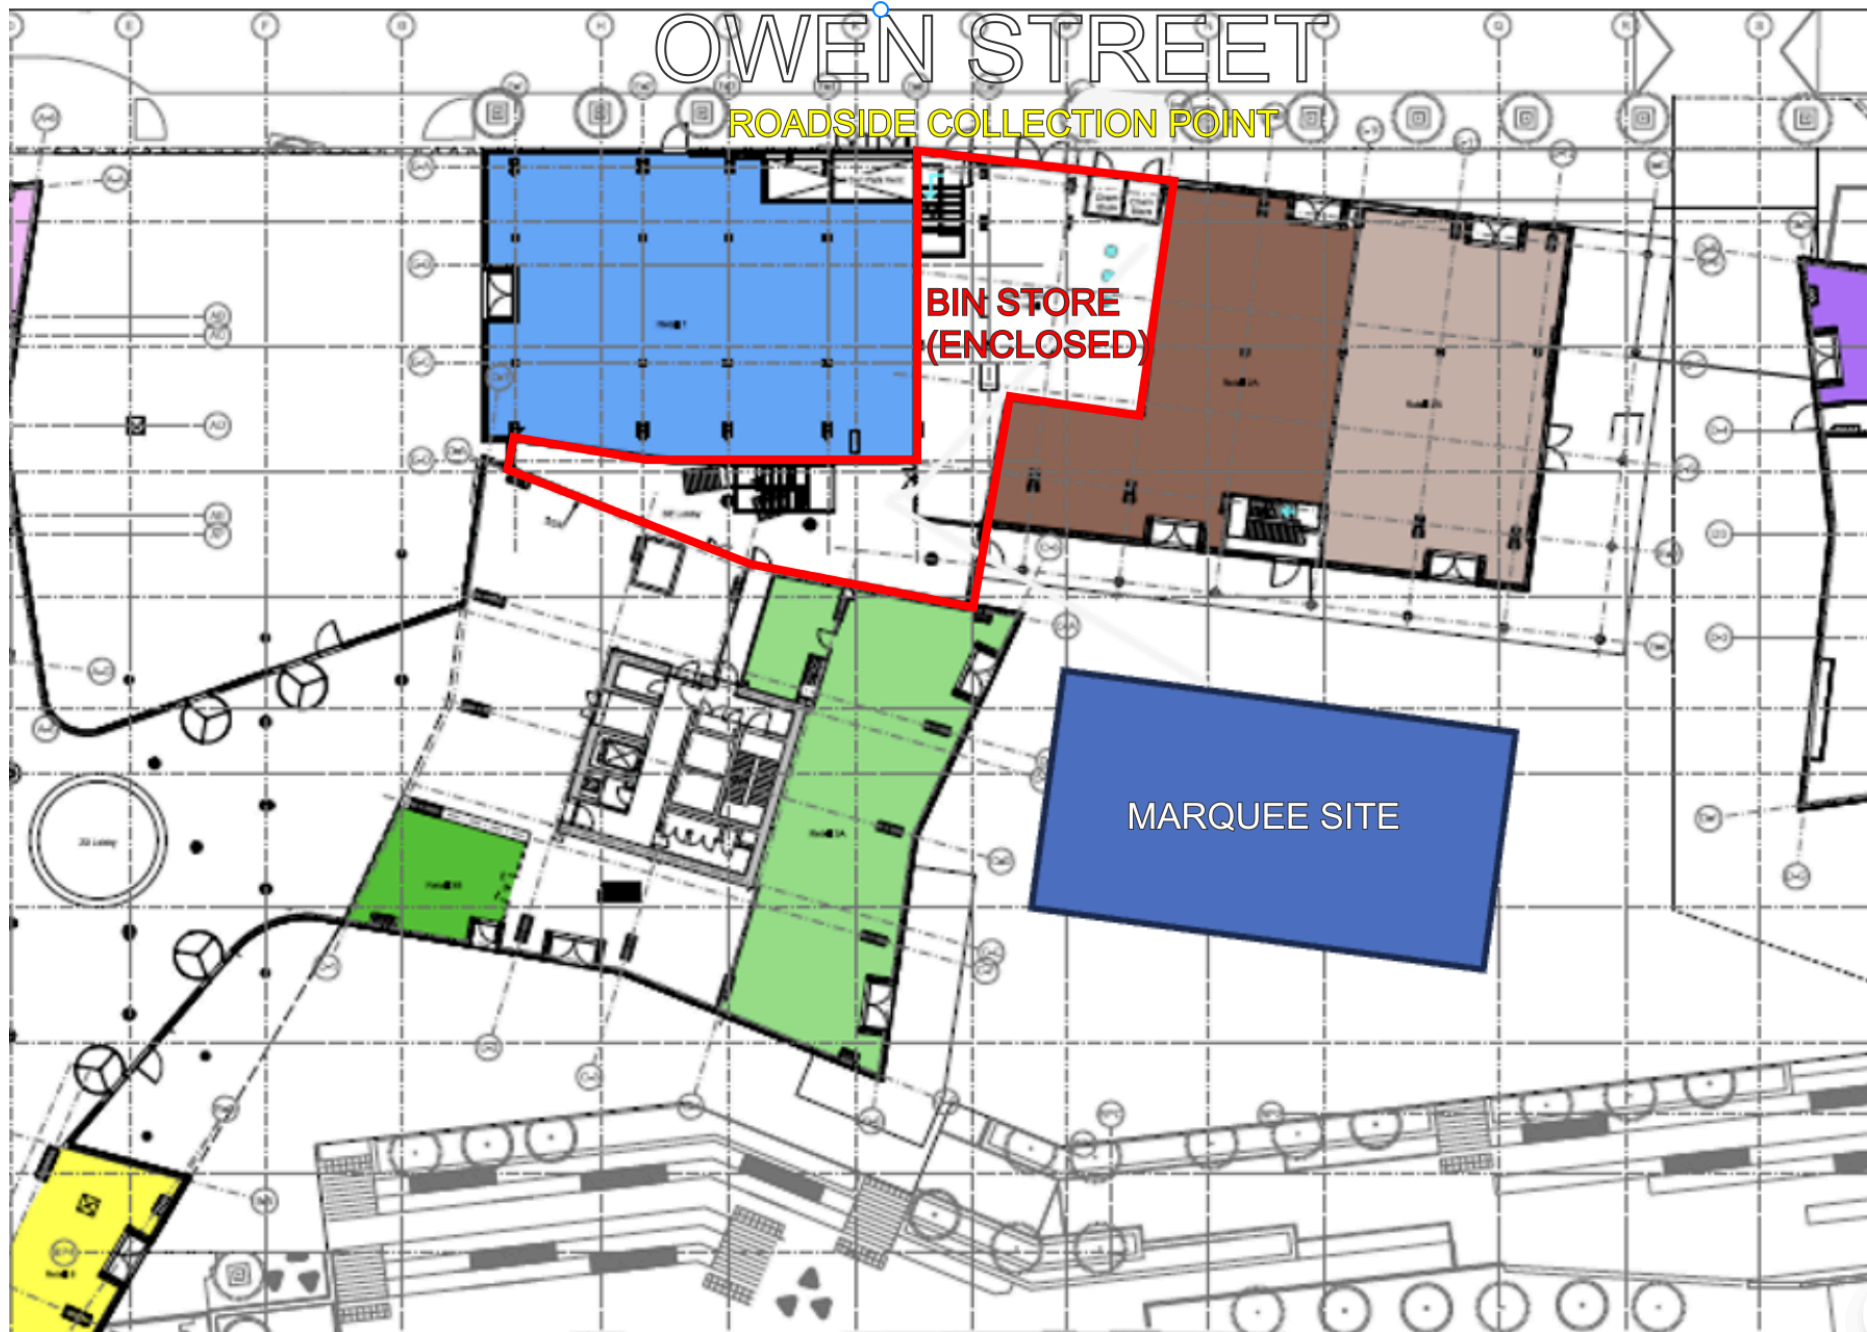

Proposed bins:

Wheeled units with lockable lids, placed on level hardstanding ground with appropriate drainage.

- 2 × 1,100L general waste bins
- 1–2 × 1,100L dry mixed recycling bins (dependent on volumes)
- 1 × 1,100L glass bin
- 1 × 240L food waste bin

Collection Point & Collection Vehicle Route

Waste Transfer Between Stores and Collection Point

- Internal waste will be transferred daily by staff using the designated back-of-house routes to Bin Store
- Waste handling will not occur in public areas, ensuring hygiene and safety standards are maintained.
- Clear signage and colour-coded bins will support effective segregation at source.

Bin Numbers, Capacity, and Collection Frequency

Waste Type	Bin Size	Quantity	Collection Frequency	Contractor
General waste	1,100L	2	3x per week	Fresh Start
Dry mixed recycling	1,100L	1-2	2-3x per week (to be reviewed after first fortnight)	Fresh Start
Glass	1,100L	1	2x per week	Fresh Start
Food waste	240L	1	Weekly	Fresh Start

Collection frequencies will be reviewed during the first two weeks of operation and adjusted as necessary to maintain site cleanliness.

Collection Schedule (estimated)

The following is provided by Fresh Waste, the installation's chosen waste contractor, who has provided this table based on the timetable of their existing collections at Owen Street.

ESTIMATED COLLECTION TIME // TIMETABLE

	Monday	Tuesday	Wednesday	Thursday	Friday	Saturday	Sunday
General Waste	9AM - 11AM	6AM - 8AM	5.30AM - 7.30AM	9AM - 11AM	9AM - 11AM	5AM - 7AM	7AM - 9AM
Dry Mixed Recycling	Not in area but can be if required	7.30AM - 9.30AM	9AM - 11AM	6.30AM - 8.30AM	8AM - 10AM	10AM - 12PM	8AM - 10AM
Food Waste	9AM - 11AM	6AM - 8AM	5.30AM - 7.30AM	9AM - 11AM	9AM - 11AM	5AM - 7AM	7AM - 9AM
Glass Waste	Not in area but can be if required	7AM-9AM	7AM-9AM	7AM-9AM	5AM - 7AM	5AM - 7AM	7AM-9AM

Site Clearance

- All waste management infrastructure (bins, fencing, and hardstanding) will be removed at de-rig.
- The site will be left clean, clear, and free of all waste or debris.
- Licensed contractors will handle all final waste uplifts prior to site handover.
- Waste collection documentation will be retained for audit.
