
143194/JO/2025 longley lane, variation of hours,

From [REDACTED]

Date Wed 08/10/2025 17:09

To David Lawless [REDACTED]

Hi Dave,

Apologies, I have reviewed the above application and have the following comments to make:

Hours

The acoustic report by Clarke Saunders, dated March 2025, shows that a noise survey has been taken between Wednesday 5th February to Friday 14 February 2025 at two locations and further manned measurements were taken including at the NSRs, giving a representative survey of existing sound levels. Further measurements were taken of the various processing activities of the MRF and GWPF, including vehicle movements. As per BS4142:2014+A.1.2019, the specific sound level (from the processing and vehicle movements) has been compared to the background noise levels (LA90), including screening, distance and directivity. The results show that the predicted sound levels at the NSR's are well below the LA90 at the times applied for, which is acceptable. They have also put a limit on vehicle movements between certain hours and this should be adhered to.

Therefore I have no objections to the variation.

Kind regards
