This document has been prepared by Sutcliffe Investigations within the terms of the Contract with the Client to whom this document is addressed. Sutcliffe Investigations disclaims any responsibility to the Client and others in respect of matters outside the scope of the said contract. No person other than the Client or agreed assignees shall rely on it in any respect and Sutcliffe Investigations shall owe no duty of care to any such third party.

Executive Summary

INTRODUCTION	Sutcliffe Investigations were instructed by Jigsaw Homes to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as The Former Apollo Public House, Miles Platting, Manchester M40 8EE.
AIMS & OBJECTIVES	The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning. This report constitutes a preliminary investigation as defined in BS10175 and contains the following: - Summary of the information obtained from an Envirocheck Report (Report Reference: 368660378-1-1). - A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of LCRM and their recommendations on contamination reports.
DEVELOPMENT PLANS	The proposed development for the site is for apartments with associated communal soft landscaped areas and car parking facilities. The proposed development is presented as Drawing Ref.: E224-1001 produced DK Architects (October 2024).
SITE DESCRIPTION	The site is irregular in shape, 0.22ha in area and can be accessed via the eastern, southern and western boundaries of the site. The site is relatively flat and comprises largely of grassed areas surrounding a derelict former public house along with a small area of hardstanding on the western portion of the site.
SITE HISTORY	**Onsite** Due to the scales of the earliest available historical maps dated (1848 and 1850) it is unclear if the markings on the site are land boundaries or building thought to be residential properties, despite this, residential properties were noted on site in 1891 and remained until 1949 when they were demolished, and the site appeared undeveloped. By 1952, a tank was noted on the western portion of the site, its purpose was unclear, and it was no longer noted by 1956. No further changes were noted on site until 1979 when the Apollo public house was noted and remained on site until the most up to date map dated 2024. A site visit has also confirmed the now disused public house remains on site. **Offsite** Historical maps initially indicate that historically off-site the surrounding land comprised fields, a skin yard, coal pits, rope walks, brooks, chemical works, brickfields, works, a chapel, schools, a manufactures, railway lines, a canal, and the increase in residential properties over time in all surrounding areas of the site.
GEOTECHNICAL UNCERTAINTY	The site has been subject to previous development and therefore, the potential for relic foundations and obstructions cannot be discounted.
GEOLOGY	**Artificial** There are no records of any artificial ground on-site however there is one record of artificial ground within 500m of the site this refers to artificial deposits 325m south of the site. **Drift** The superficial deposits for the site are noted as Devensian Till.

	Solid The solid geology for the site is noted as being Pennine Upper Coal Measures – Mudstone, Siltstone and Sandstone.
HYDROGEOLOGY	The Bedrock is classified as a Secondary A Aquifer with the Superficial Deposits classified as a Secondary Aquifer Undifferentiated. There are five groundwater abstraction points listed in the Envirocheck Report within 1000m of the site, the closest of which is 737m east of the site for which the permit end date has not been supplied.
FAULTS	No faults have been identified within the development site boundary, however 4No. Rock segments and 1No. fault is noted within 500m of the site. The closest rock segment is noted approximately 5m south of the site and the fault is noted approximately 460m west of the site.
RADON	According to the Envirocheck Report, the site is not within a radon affected area, as <1% of homes are above the action level. No radon protection measures are necessary in the construction of new dwellings or extensions.
COAL MINING	The site is within a coal mining area and the following is of note: - Underground coal mining (recorded at shallow depths) - Underground coal mining (probable at shallow depths) - Mine Entries (Shafts & Adits)
HYDROLOGY	The nearest surface water feature is noted 339m south-east of the site and is noted to be the Rochdale Canal. There are two surface water abstractions listed within the Envirocheck Report within 1000m of the site, the closest of which is 784m south of the site.
RISK ASSESSMENT	The Phase I PRA has not highlighted significant areas of concern and therefore, the site is deemed to be Class 3 – Low Risk.
CONCLUSIONS & RECOMMENDATIONS	Based on the findings of the Phase I review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken: - Submission of this Phase I PRA Report for the benefit of validating the outline planning application. - Commission a Coal Mining Risk Assessment. - Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions.

NOTE: The executive summary is an overview of the key findings and conclusions of the report. There may be other information contained in the body of the main report which puts into context the information presented within the executive summary. No reliance should be placed on the executive summary.

1 Introduction

1.1 Terms of Reference

Sutcliffe Investigations were instructed by Jigsaw Homes to undertake a Phase I Preliminary Risk Assessment (PRA) of the site known as The Former Apollo Public House, Miles Platting, Manchester M40 8EE.

1.2 Development Proposal & Legislative Context

Development Proposal

The proposed development for the site is for apartments with associated communal soft landscaped areas and car parking facilities. The proposed development is presented as Drawing Ref.: E224-1001 produced DK Architects (October 2024).

Legislative Context

The presence of contaminants which may pose a risk to human health and / or the environment is a planning consideration. As part of the planning regime, it needs to be considered whether the site is "suitable for its proposed end use". Planning is concerned with the site's proposed end use, not its current use, where the amount of contamination is required to be low relative to the level of risk.

Section 57 of the Environment Act 1995 adds Part 2A (ss. 78A to 18YC) to the Environmental Protection Act 1990 and contains the legislative framework for identifying and dealing with contaminated land. Where development is undertaken on land which may be affected by contamination, the National Planning Policy Framework, paragraph 189 to 194 considers pollution and remediation. This links the contaminated land regime within the development process.

For there to be a significant risk requiring further investigation a perceived source (contaminant), a receptor (humans, living organisms or property) and a pathway between them must all be present, resulting in a complete contaminant linkage.

In order to assess whether this is the case, background research is required to obtain relevant information about the site and its surroundings and to assess the findings qualitatively. The scope of the assessment examined whether there is the potential for current and historic soil and/or groundwater contamination to be present, both at and in the vicinity of the site, and to assess significance in terms of the potential to pose a risk to human health, controlled waters, building infrastructure and the wider environment and identify any associated potential liabilities.

Part 2A of the Environmental Protection Act 1990 ("Part 2A") provides the legislative framework for the contaminated land regime in England, Wales and Scotland. It provides for contaminated land to be identified and dealt with in a risk-based manner. The Contaminated Land (England) Regulations 2006 (SI 2006/1380) set out provisions for procedural matters under Part 2A. The 2006 regulations have recently been modified with the introduction of The Contaminated Land (England) (Amendment) Regulations 2012, which came into force on 6th April 2012. This includes an amendment to Regulation 3(c) to

take account of the updated definition of “controlled waters” in Section 78A(9) of the Environmental Protection Act 1990. Section 78A(2) of Part 2A of the EPA 1990 defines contaminated land as “land which appears to the local authority in whose area it is situated to be in such a condition, by reason of substances in, on or under the land, that:

- significant harm is being caused or there is a significant possibility of such harm being caused; or
- pollution of controlled waters is being or is likely to be caused.

Contaminated Land Statutory Guidance published in April 2012 provides for a new four category test which is intended to clarify when land does or does not need to be remediated, where Category 1 is deemed as being high risk and Category 4 as being low risk.

1.3 Previous Studies

Sutcliffe are not aware any previous environmental or geotechnical investigations having been completed on site.

1.4 Objectives & Scope of Assessment

The Phase 1 PRA is required to assess the ground based environmental and geotechnical risks, development constraints and liabilities associated with the development of the site, required in support of an application for outline planning.

This report will inform the study of any potential contaminated land issues to be identified, assessed and actioned and has been designed to provide sufficient information to satisfy the requirements of National Planning Policy Framework (NPPF) in order to satisfy the aims and objectives of the project.

The report will culminate in the presentation of a Preliminary Conceptual Site Model (CSM) and will include clear robust recommendations for any additional works. These works will be designed to fully assess and mitigate risks, development constraints and abnormals that may be required in support of a detailed planning application and design of detailed foundation options.

This report constitutes a preliminary investigation as defined in BS10175 and contains the following:

- Summary of the information obtained from an Envirocheck Report (Report Ref.: 368660378-1-1), which is presented in Appendix A.
- A preliminary risk assessment of potential environmental risks associated with the proposed redevelopment of the site to identified receptors, following the methodology of Land contamination risk management (LCRM) and their recommendations on contamination reports.
- Recommendations for further investigation/actions if required.

The scope of works was to undertake a Phase I PRA using available information, and to place the site in its environmental context and has included the following:

- A review of available historic maps to determine the land-use history in the context of potentially contaminative activities;
- A review of environmental data relating to the site and its surroundings using a proprietary third-party environmental database;
- Desk-based assessment of site geology, hydrogeology and hydrology from published mapping and web-based sources to determine the site's environmental setting and sensitivity;
- A web-based search of the Environment Agency (EA) website and other freely available sources of information to identify any potential issues relating to the site and surrounding areas; and
- Provision of a qualitative contaminated land risk assessment based on Source-Pathway-Receptor as per current best practice contained in LCRM.

A site inspection was undertaken by a Sutcliffe engineer – Alex Tosh, on the 9th December 2024. No sampling or testing of soils or waters will be undertaken as part of this environmental review. All other information in this report has been obtained via public sources.

2 Environmental Review

2.1 Introduction

The information presented within this chapter was compiled based on a site inspection, completed by a suitably qualified Sutcliffe Engineer, and a review of an Envirocheck Report (Report Reference: 368660378-1-1), presented in Appendix A.

2.2 Site Location & Setting

The site address is located at the former Apollo Pub, Miles Platting, Manchester M40 8EE at National Grid Reference (NGR) 385800, 399610 and is approximately 2.44km north-east from the centre of Manchester.

Location plans of varying scales are presented as *Figures 1 & 2* and an Aerial Photograph is presented as *Figure 3*.

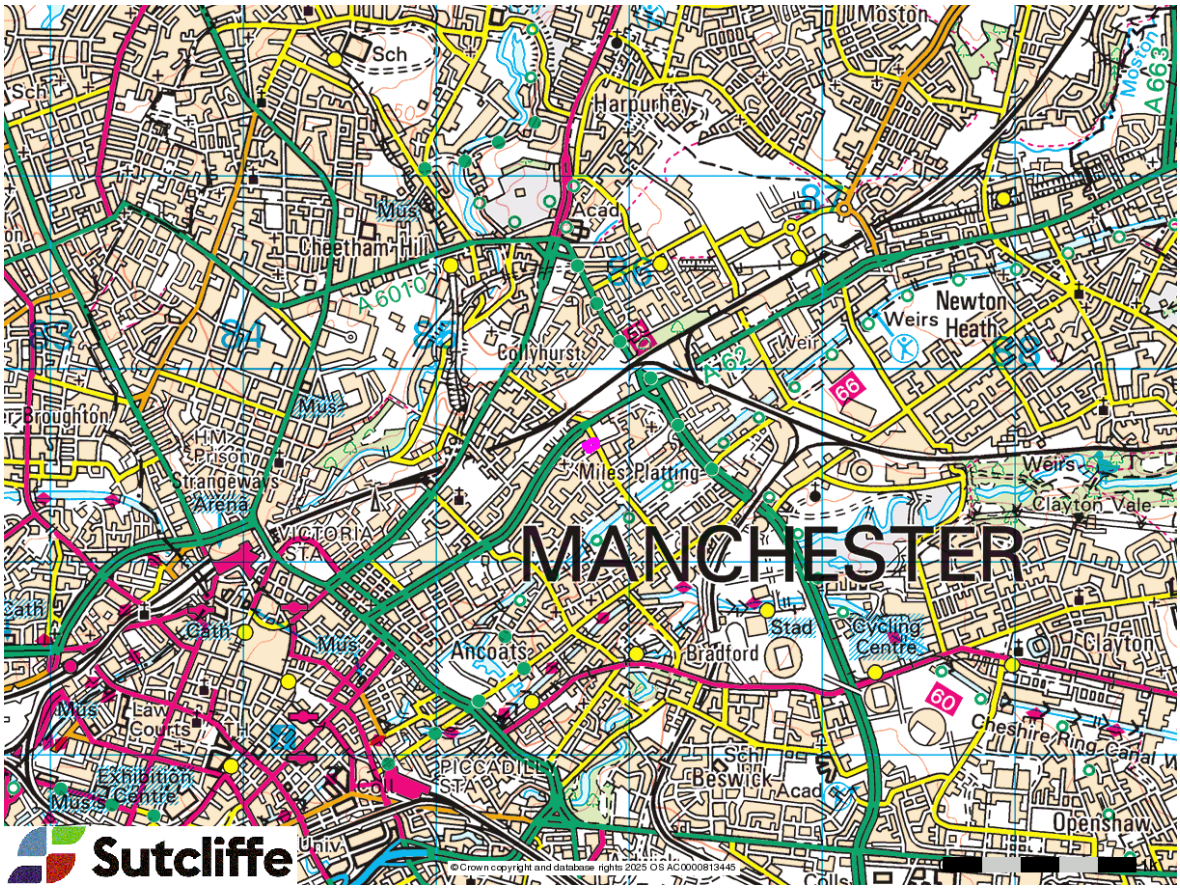

Figure 1: General Location of Site

2.3 Site Description & Walkover

The site is irregular in shape, 0.22ha in area and can be accessed via the eastern, southern and western boundaries of the site. The site is relatively flat and comprises largely of grassed areas surrounding a derelict former public house along with a small area of hardstanding on the western portion of the site. A photographic log of the site is presented as Appendix B.

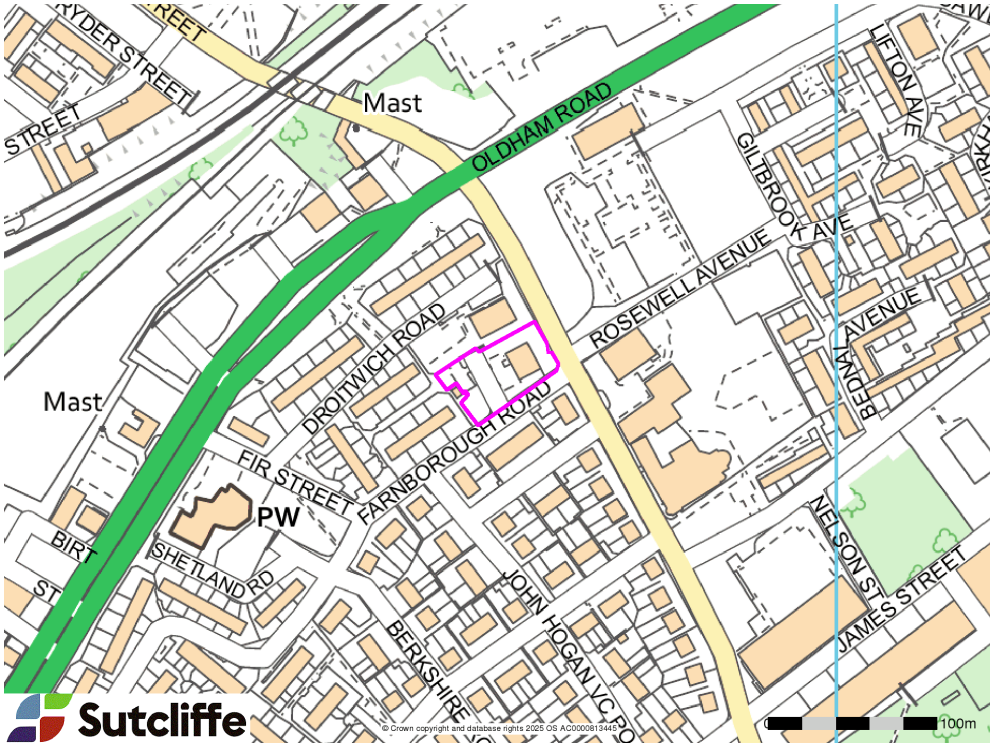

Figure 2: General Site Layout

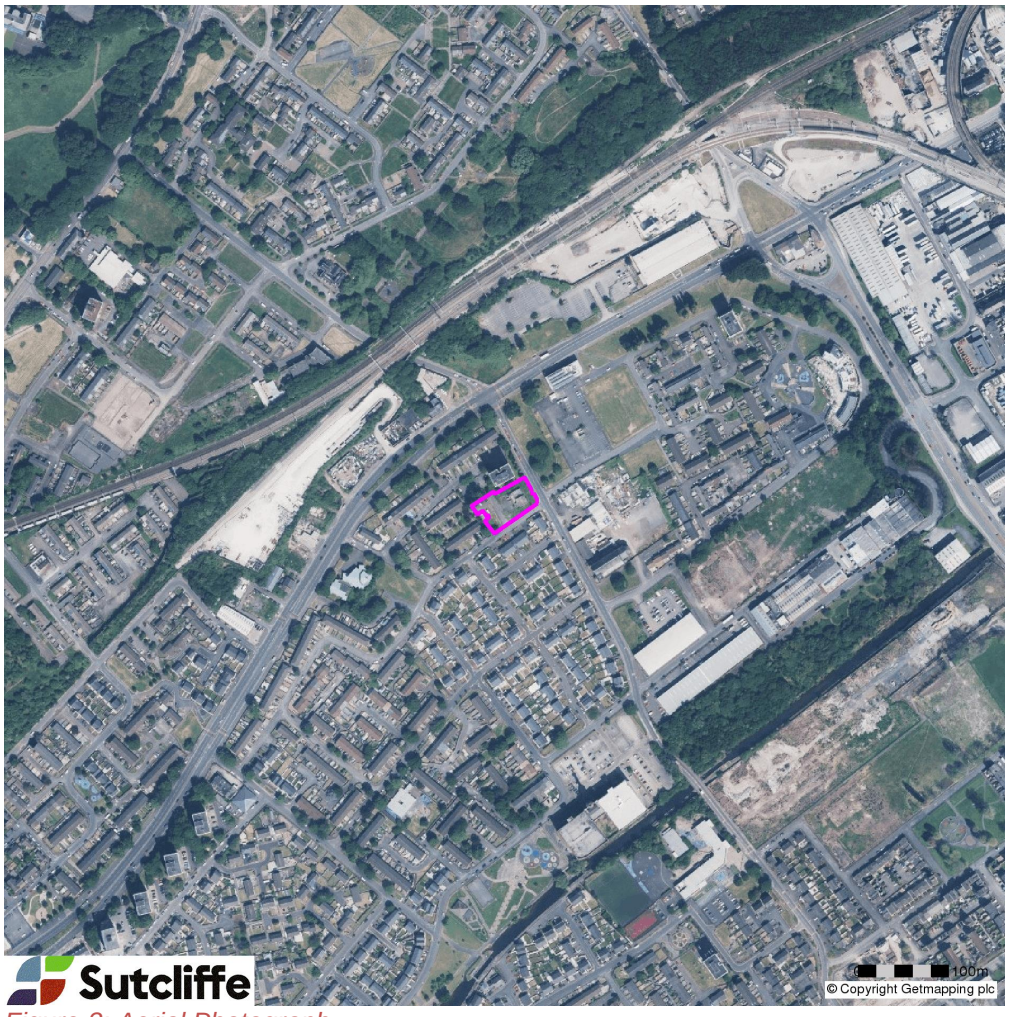

Figure 3: Aerial Photograph

2.4 Adjacent Land Uses

Table 2.1 summarises the adjacent land uses.

Table 2.1: Adjacent Land Uses

Direction	Adjacent Land Use
North	Residential
East	Commercial Premises and Local Amenities
South	Residential
West	Residential

2.5 Services

Underground Pipelines and Transmission Assets

A search of the Linesearch database was undertaken on 5th February 2025. This database lists pipelines owned and/or operated by over 40No. pipeline and transmission operators, but not all operators are registered.

According to the database, Cadent Gas, Electricity North West Limited, EU Networks Fibre UK Limited, Last Mile and Neos Networks are noted to have underground pipelines or transmission assets on the site or within a 25m search radius.

Service plans are presented in Appendix C.

Electric

Low voltage electricity mains are noted along the eastern boundary of the site along Varley Street and the southern boundary of the site along James Leach VC Road. Low voltage electricity mains are also noted to cut across the northern portion of the site and also enter the site from the southern boundary to the on-site public house.

Gas

Gas mains are noted along the eastern boundary of the site along Varley Street.

Water / Sewer

Water mains are noted along the eastern boundary of the site along Varley Street and the southern boundary of the site along James Leach VC Road, a water main is also noted to enter the site from the southern boundary.

Sewer mains are noted along the eastern boundary of the site along Varley Street. A sewer main is also noted to cut across the southern portion of the site.

BT

BT cables are noted along the eastern boundary of the site along Varley Street and the southern boundary of the site along James Leach VC Road.

2.6 Site History

Historical maps were obtained and reviewed by Sutcliffe Investigations to determine the historical development of the target site. These are presented in Appendix A. This enabled an assessment to be made of the potential for contamination associated with former activities, both on-site and in the surrounding areas.

Onsite

Due to the scales of the earliest available historical maps dated (1848 and 1850) it is unclear if the markings on the site are land boundaries or building thought to be residential properties, despite this, residential properties were noted on site in 1891 and remained until 1949 when they were demolished, and the site appeared undeveloped.

By 1952, a tank was noted on the western portion of the site, its purpose was unclear, and it was no longer noted by 1956.

No further changes were noted on site until 1979 when the Apollo public house was noted and remained on site until the most up to date map dated 2024. A site visit has also confirmed the now disused public house remains on site.

A detailed review of the historical development of the site is presented in Appendix D.

Offsite

The earliest historical maps dated 1848 and 1850 noted a skin yard approximately 70m east of the site, a coal pit approximately 200m east, ropewalks approximately 100m and 400m south of the site, Newton Brook approximately 105m south, a chemical works approximately 290m south east, Scooters Brook approximately 600m south, brickfields approximately 390m south and 285m west and residential properties between 500 to 1000m south and south west of the site.

By 1891 residential properties were noted in all immediate surroundings areas of the site, a wire works was noted approximately 15m north-west of the site, a chapel 10m north-east of the site beyond which a school was noted, a floor and cloth manufactory was noted approximately 10m south-east, Oldham Road Flint glass works was noted approximately 65m east and railway lines were noted approximately 170m west and 200m north of the site.

No further changes were noted in the surrounding areas of the site until 1908 when the industrial area approximately 270m south-east of the site had become more established and the Rochdale Canal was noted approximately 365m south-east of the site running through this industrial area.

Again, no further changes were noted until 1938 when two large derelict areas were identified 240m north-west and 415m south of the site. Between 1948 and 1949 the cloth manufacturer is now noted as a cotton and weaving mill and a bag factory.

No further changes were again noted until 1956 when the derelict areas noted to the north-west and south of the site have again become developed with residential properties.

Between 1960 to 1968 the configuration of properties immediately south-west of the site was noted to change and residential properties noted immediately east and approximately 65m north of the site were no longer evident.

Between 1977 to 1984 an electric substation was noted immediately west of the site and much of the industrial area to the south-east of the site had been demolished and replaced with local amenities including a library, swimming pool and schools.

Other than further demolition to the industrial area to the south-east of the site between 1990 and 1992 and the demolition of residential properties approximately 620m east of the site in 1999 no further changes were of note until the most recent historical map dated 2024.

A detailed review of the historical development of the surrounding land uses is presented in Appendix D.

2.7 Environmental Database

A commercial database search (provided by Envirocheck) was obtained to provide further information regarding the site and the surroundings. Relevant information and records are summarised below:

Contaminated Land Entries

The database has no contaminated land entries within 500m of the site.

Environmental Permitted Activities

According to the database there are no current Local Authority Integrated Pollution Prevention and Controls within 500m of the site. There are 4No. Local Authority Pollution Prevention and Controls within 500m of the site, one of which is noted within 250m of the site, details for which are presented hereunder:

Table 2.2: Environmental Permitted Activities

Distance / Direction (<250m)	Name	Description	Status
181m W	21st Century Garages	PG1/14 Petrol Filling Station	Authorisation Revoked

Hazardous Substances Sites

According to the database, there is 1No. Control of Major Accident Hazards (COMAH) registered sites within 500m of the site, details of which are noted below.

There are no Explosive Sites, no Notification of Installations Handling Hazardous Substances (NIHHS) sites and no Planning Hazardous Substance Consents or Enforcements within 500m of the site.

Table 2.3: COMAH-registered Sites

Distance / Direction (<500m)	Name	Type	Status
418m SE	Degussa Limited	Upper Tier	Record Ceased To Be Supplied Under COMAH Regulations

Substantiated Pollution Incident Register

According to the database, there are no substantiated pollution incidents within 500m of the site.

Landfill Sites

According to the Envirocheck Report there are;

- No BGS Recorded Landfill Sites within 500m of the site.
- No Historical Landfill Sites within 500m of the site.
- No Local Authority Recorded Landfill Sites within 500m of the site.
- No Registered Landfill sites within 500m of the site.

Infilled Land

There are 6No. records of Potentially Infilled Land (Non-Water) within 500m of the site, with 4No. records within 250m of the site, details of which are provided hereunder:

Table 2.4: Infilled Land (Non-Water)

Distance / Direction (<250m)	Use	Year
51m W	Unknown Filled Ground (Pit, quarry etc)	1993
150m S	Unknown Filled Ground (Pit, quarry etc)	1993
218m NW	Unknown Filled Ground (Pit, quarry etc)	1993
223m E	Unknown Filled Ground (Pit, quarry etc)	1993

There are 16No. records of Potentially Infilled Land (Water) within 500m of the site, with 6No. records within 250m of the site, details of which are provided hereunder:

Table 2.5: Infilled Land (Water)

Distance / Direction (<250m)	Use	Year
23m NW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
65m NE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
120m SE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
148m NW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
180m SE	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848
215m SW	Unknown Filled Ground (Pond, marsh, river, stream, dock etc)	1848

Waste Management Facilities

The database has recorded 2No. Registered Waste Transfer Sites, 1No. Registered Waste Treatment or Disposal Site and 1No. Licensed Waste Management Facility within 500m of the site, details of each are provided below.

Table 2.6 Registered Waste Transfer Sites

Distance / Direction (500m)	Licence Holder	Authority	Site Category / Max Input Rate	Licence Status
264m SW	Re-Can Ltd	Environment Agency - North West Region, South Area	Transfer Very Small (Less than 10,000 tonnes per year)	Exempt
356m NE	Park Pit Landfill Ltd	Environment Agency - North West Region, South Area	Transfer Large (Equal to or greater than 75,000 and less than 250,000 tonnes per year)	Surrendered

Table 2.7: Registered Waste Treatment or Disposal Sites

Distance / Direction (500m)	Licence Holder	Authority	Site Category / Max Input Rate	Licence Status
408m SE	Degussa Ltd Manox Division	Environment Agency - North West Region, South Area	Treatment Medium (Equal to or greater than 25,000 and less than 75,000 tonnes per year)	Authorised

Table 2.8: Licensed Waste Management Facilities

Distance / Direction (500m)	Operator Name	Authority	Site Category	Licence Status
291m NE	Biffa Waste Services Limited	Environment Agency - North West Region, South Area	Transfer Stations taking Non-biodegradable Wastes	Issued

Radioactive Materials

According to the Envirocheck Report, there are no authorisations for radioactive substances within 500m of the site.

Fuel Stations

According to the database, there is 1No. fuel station entry within 500m of the site.

Table 2.9: Fuel Stations

Distance / Direction (<500m)	Name	Status
181m W	Impact Services Ltd	Obsolete

Contemporary Industrial Land Uses

According to the database, there are 64No. entries located within 500m of the site, with 34No. located within 250m of the site, details of the active entries are presented hereunder:

Table 2.10: Contemporary Industrial Land Uses

Distance / Direction (<250m)	Name	Classification	Status
102m SE	Active Aluminium Systems Ltd	Dorr Manufacturers – Domestic	Active
213m SE	Go Window Blinds	Blinds, Awnings & Canopies	Active
213m SE	Macma Cleaning Services	Cleaning Services – Domestic	Active
213m SE	S&S Power Transmissions	Power Transmissions Services	Active
236m W	Black Cab Centre Ltd	Garage Services	Active

2.8 Historical Contamination Potential

Site

Historical maps have indicated that residential properties were noted on site from 1891 to 1949, a tank was noted from 1952 to 1956 and a public house with likely basements was noted from 1979 to present day

With the exception of made ground potentially being present on site, together with potential basements associated with the public house, the potential for significant contamination to have arisen at the site as a result of the current and former usage on site is considered to be low. However, the possibility of contamination albeit likely to be localised cannot be discounted.

Surrounding Area

Although historical industrial activity has been noted, no current identifiable significant potentially contaminative activities were identified as having taken place in the immediate surrounding area.

Therefore, the potential for off-site sources of contamination to impact the site is considered low.

3 Environmental Setting

3.1 Introduction

Desk-based research of the local geology, hydrogeology, hydrology and ecology was carried out in order to establish the potential for migration of contamination onto or away from the site, and to assess the surface water and groundwater sensitivity of the surrounding area. Information was obtained from a number of sources, namely:

- Inspection of the British Geological Survey (BGS) GeoIndex Onshore Viewer;
- Inspection of the MAGIC interactive map service;
- A review of online web-based information searches;
- A review of previous site investigation reports pertaining to the site; and,
- A review of publicly available information.

3.2 Soils Chemistry

The environmental database also presents an estimation of the rural background soil chemistry within the site area.

Table 3.1: Soil Chemistry

Contaminant	Concentration (mg/kg)
Arsenic	25 - 35
Cadmium	<1.8
Chromium	60 - 90
Lead	100 - 200
Nickel	15-30

Reference to the data presented suggests that the majority of metals concentrations are generally anticipated to be below current Tier 1 Assessment Criteria in relation to human health effects.

3.3 Geology

According to the BGS GeoIndex Onshore Viewer and the relevant British Geological Survey (BGS) Solid and Drift Sheets 85 Manchester (2010) at a scale of 1:50,000 the following geological succession has been identified (Appendix A).

Artificial Ground

There are no records of any artificial ground on-site however there is one record of artificial ground within 500m of the site this refers to artificial deposits 325m south of the site.

Superficial Geology

The superficial drift deposits for the site are noted as Till, Devensian - Clay, sandy, gravelly, silty.

Solid Geology

The solid geology for the site is noted as Pennine Upper Coal Measures Formation - Mudstone, Siltstone and Sandstone.

Table 3.2: Geology Summary

Strata	Description	Soil / Rock Type
Artificial Ground	On-site No records	N/a
Drift	Till, Devensian	Clay, sandy, gravelly, silty
Solid	Pennine Upper Coal Measures	Mudstone, Siltstone & Sandstone

Faults

No faults have been identified within the development site boundary, however 4No. Rock segments and 1No. fault is noted within 500m of the site.

The closest rock segment is noted approximately 5m south of the site and the fault is noted approximately 460m west of the site.

British Geological Society (BGS) Logs / Records

There are no BGS borehole logs available to view in the vicinity of the site, to further determine similarly mapped geological conditions at the site.

There are 11No. BGS Recorded Mineral sites within 1000m of the site, the closest of which was 388m northwest of the site, however, all these workings have ceased.

Ground Stability

Table 3.3 below summarises the natural hazards information presented in the Envirocheck Report.

Table 3.3: Potential Natural Hazards

Natural Hazard	Hazard Potential
Shrink - Swell Clays	Very Low
Landslides	Very Low
Soluble Rocks	No Hazard
Compressible Deposits	No Hazard
Collapsible Deposits	Very Low
Running Sands	Very Low

3.4 Coal Mining & Brine Subsidence

The site does fall within a coal mining area. Based on the Consultants Coal Mining Report (*Report Reference: 51003476728001)* the following is of note:

- The following Past Underground Mining is noted within the report;

Table 3.4 Past Underground Mining

Seam	Depth (m bgl)	Direction of Working	Dip	Extraction Thickness (cm)
BRADFORD FOUR FEET	21	Beneath Property	18.4	120

* Note: only seams within 150m below the site have been noted.

- No Probable Unrecorded Shallow Workings are recorded.
- No Spine Roadways are recorded at shallow depth.
- The following Mine Entries are recorded within 50m of the site;

Table 3.5 Mine Entries

Entry Type	Reference	Grid Reference	Treatment Description	Mineral
Shaft	385399-008	385808 399682	N/A	Coal
Shaft	385399-009	385730 399596	N/A	Coal
Shaft	358399-015	385691 399608	This shaft has been infilled with shale and capped with concrete	Coal
Shaft	385399-016	385708 399620	The shaft has been infilled with shale	Coal
Shaft	385399-017	385706 399609	The shaft has been infilled with shale	Coal

The following Abandoned Mine Catalogue Numbers are noted intersecting with the site boundary.

Table 3.6 Mine Entries

2655	NW1171	NW645
PO0	11471	0
NW1172	NW644	

- The following Outcrops have been recorded.

Table 3.7 Outcrops

Seam Name	Mineral	Seam Workable	Distance to Outcrop (m)	Direction to Outcrop	Bearing of Outcrop
BRADFORD FOUR FEET	Coal	Yes	37.1	North-East	116

- No Opencast mines are recorded within 500m of the site boundary.
- No records of Coal Mining subsidence within 50m of the site boundary.
- There is no record of mine gas emissions recorded within 500m of the site boundary.

The potential risks to the development of the site from historic coal workings and remediation to these features as identified within the Coal Authority Report are summarised below in *Table 3.8*.

Table 3.8: Potential Coal Mining Issues

Coal Mining Issues	Yes	No	Risk Assessment
Underground coal mining (recorded at shallow depths)	✓		Required
Underground coal mining (probable at shallow depths)	✓		Required
Mine Entries (shafts and adits)	✓		Required
Coal mining geology (fissures)		✓	Not required
Record of past mine gas emissions		✓	Not required
Recorded coal mining surface hazard		✓	Not required
Surface mining (opencast workings)		✓	Not required

A full copy of the Coal Authority Mining Repot can be found in Appendix E.

3.5 Radon

According to the Envirocheck Report, the site is in a Lower probability radon area (less than 1% of homes are estimated to be at or above the Action Level). No radon protection measures are necessary in the construction of new dwellings or extensions.

3.6 Hydrogeology

Groundwater protection policy uses aquifer designations that are consistent with the Water Framework Directive.

These designations reflect the importance of aquifers not only in terms of groundwater as a resource (drinking water supply) but also their role in supporting surface water flows and wetland ecosystems.

Types of aquifer designations are presented in *Table 3.9*, with the designations assigned to the underlying strata of the site in *Table 3.10* hereunder:

Table 3.9: Aquifer Designations

Designation	Description
Principal Aquifer	Layers of rock or drift deposits that have high intergranular and / or fracture permeability - meaning they usually provide a high level of water storage. They may support water supply and / or river base flow on a strategic scale. In most cases, principal aquifers are aquifers previously designated as major aquifer.
Secondary A Aquifer	Permeable layers capable of supporting water supplies at a local rather than strategic scale, and in some cases forming an important source of base flow to rivers. These are generally aquifers formally classified as minor aquifers.
Secondary B Aquifer	Predominantly lower permeability layers which may store and yield limited amounts of groundwater due to localised features such as fissures, thin permeable horizons and weathering. These are generally the water-bearing parts of the former non-aquifers.
Secondary (Undifferentiated) Aquifer	Cases where it has not been possible to attribute either category A or B to a rock type. In most cases, this means that the layer in question has previously been designated as both minor and non-aquifer in different locations due to the variable characteristics of the rock type.

Designation	Description
Unproductive Aquifer	Rock layers or drift deposits with low permeability that have negligible significance for water supply or river base flow.

Table 3.10: Hydrogeology Summary

Strata	Description	Soil / Rock Type	Designation
Superficial	Till, Devensian	Clay, sandy, gravelly, silty	Secondary Aquifer Undifferentiated
Bedrock	Pennine Upper Coal Measures	Mudstone, Siltstone & Sandstone	Secondary A Aquifer

The Envirocheck Report indicates that the site is not located within a Groundwater Source Protection Zone (SPZ).

There are five groundwater abstraction points listed in the Envirocheck Report within 1000m of the site, the closest of which is 737m east of the site for which the permit end date has not been supplied.

3.7 Hydrology

The following is also of note:

- The nearest surface water feature is noted 339m south-east of the site and is noted to be the Rochdale Canal.
- There are thirteen recorded pollution incidents to controlled waters listed in the Envirocheck Report. The nearest is noted as being 407m north-east of the site, the pollutant was unknown with an incident severity of category 3 (minor incident).
- There are two surface water abstractions listed within the Envirocheck Report within 1000m of the site, the closest of which is 784m south of the site.
- There are no biological or chemical quality records noted in the vicinity of the site.

3.8 Flood Risk

According to the Envirocheck Report, the site is not within 250m of an area at risk from extreme flooding from rivers or sea without defences.

According to the Envirocheck Report, the site is at low risk of flooding from surface water.

According to the BGS Flood GFS Data map, the site is situated within an area that has the potential for groundwater flooding to occur at the surface.

3.9 Sensitive Land Uses

Ecological Receptors

According to the database, there are 1No. type of Sensitive Land Uses within 1000m of the site, the details of which are provided below:

- The site is noted to fall within a Nitrate Vulnerable Zone.

Significance of Environmental Setting

The significance of the environmental setting is considered by Sutcliffe Investigations to be as follows:

Table 3.11: Environmental Setting Summary

Environmental Setting	Sensitivity	Rationale
Groundwater	Low – Moderate	The site is situated in an area of low-moderate sensitivity with respect to groundwater resources due to the presence of an Unproductive Aquifer and Secondary A Aquifer beneath the site. However, this sensitivity is reduced by the absence of any abstractions (sensitive or otherwise) within the immediate vicinity of the site.
Surface Water	Low	With respect to surface water resources, the site is considered to be located in a low sensitivity setting.
Flood Risk	Low	The site is not within 250m of an area at risk of extreme flooding from rivers or sea without defences.
Sensitive Land Uses	Low	With respect to sensitive land uses such as protected habitats, protected sites, protected buildings and sensitive receptors, the site is considered to be located in a low sensitive setting.

4 Preliminary Qualitative Risk Assessment

4.1 Preliminary Conceptual Site Model (CSM)

A conceptual model is an essential element of any site-specific environmental risk assessment. In this context, they are often simple representations of the hypothesised relationships between sources, pathways and receptors.

For the purpose of this report, a basic conceptual model has been developed based on the principles of LCRM and interpretation of information gathered during the Phase I review. Thus, this allows the identification of potential contaminant linkages and whether these linkages have the potential to comprise significant harm and/or pollution of controlled waters in relation to the site.

Based on this interpretation, the implications for potential liability associated with soil or water contamination at the site can be evaluated.

- **SOURCES** – the identification of contaminants within the soils and groundwater that represent potential pollution sources;
- **PATHWAYS** – the identification of the potential exposure mechanisms and migration pathways from the potential sources; and
- **RECEPTORS** – the identification of the potential receptors that could be sensitive to harm if exposed to these pollution sources.

Collectively, each of these scenarios would be considered a potential pollutant linkage that may require further assessment.

A preliminary conceptual model is presented below (*Table 4.7*) in accordance with the guidance outlined within LCRM.

4.2 Identification of Potential Sources

Based on the information from the desk study, historical maps, published information, and a site walkover a summary of potential contaminant sources is provided in *Table 4.1*.

Table 4.1: Potential Sources

Ref.	Potential Sources	Potential Contaminants
S1 (On-site)	Made Ground associated with the demolition of former buildings / basements associated with the public house	All metals, fuel, hydrocarbons and oils and localised ground gas.
	Mine gas associated with historic mining activity	Carbon Monoxide, Carbon Dioxide, Methane, Oxygen, Nitrogen, Hydrogen and other Hydrocarbons
S2 (Off-Site)	Mine gas associated with historic mining activity	Carbon Monoxide, Carbon Dioxide, Methane, Oxygen, Nitrogen, Hydrogen and other Hydrocarbons

S1 (On-site)

Made Ground associated with the demolished buildings is anticipated below the site. By its nature, Made Ground may contain contaminative material, most commonly heavy metals, PAHs and asbestos.

Although the Coal Authority Report states that no mine gas emissions have been recorded within 500m of the site, due to shallow underground mine workings recorded beneath the site, the possibility of mine gas emissions cannot be discounted.

Additionally, carparking associated with the public house on site may be a source of hydrocarbon contamination which may pose a vapour ground gas risk.

S2 (Off-site)

As mentioned above, due to shallow underground mine workings recorded beneath the site, the possibility of mine gas emissions cannot be discounted.

4.3 Potential Exposure Pathways

Exposure pathways are the potential routes and mechanisms by which potential on-site sources could be linked to the identified potential receptors and thereby expose them to potential harm.

The following potential exposure pathways have been identified at the site:

Table 4.2: Potential Exposure Pathways

Ref.	Pathway	Description
P1	Direct contact with potential contaminants.	Dermal absorption, ingestion and inhalation of contaminants via direct contact. Construction workers may come into contact during the site works, however this will be for a short time and therefore limited exposure will occur. PPE can be used and worn as a precaution to reduce the risk.
P2	Ingestion of potential contaminants.	
P3	Inhalation of potential contaminants.	
P4	Leaching and migration of contaminants.	Leaching of possible contaminants could migrate into the underlying Secondary A Aquifer via shallow groundwater. On site drainage is also at risk from shallow contamination, if present.
P5	Vertical and lateral migration of ground gases / vapours.	There is the potential for contaminants to be present on the site, which could generate ground gas & vapours on site.

P1 – P3 (Direct contact)

The site has been considered for a residential end-use with soft landscaping, and as such is considered a sensitive end-use.

If the identified contaminant sources are present or have migrated to the site, pathways to the receptors are considered possible.

P4 (Leaching & Migration)

Made Ground as previously discussed within section S1 may contain potentially leachable contaminants.

Historic hydrocarbon spills from car parking onsite are considered possible which could migrate, however, volumes anticipated would be unlikely to be significant to impact controlled waters.

Lateral migration off-site may be possible, dependent on the composition of the Glaciofluvial deposits, more specifically the granular / cohesive content of the lateral continuity of any granular horizons. Such migration is considered possible though unlikely.

Downward migration of contaminants to the Secondary A Aquifer is considered unlikely due to the cohesive Glacial Till and Glaciofluvial Deposits. Glaciofluvial Deposits are typically encountered as interbedded horizons of a wide range of materials, including cohesive Clay and Silt dominant layers. As such, while downward migration may be possible, it is considered ultimately unlikely due to the anticipated cohesive horizons likely to be encountered within the strata.

P5 (Migration of ground gas / vapours)

Made Ground thicknesses are expected to be relatively limited given the development present onsite. As such, it is considered unlikely that a thickness of Made Ground capable of generating significant thickness of permanent gases will be present.

Although mine gas emissions from past underground mining is considered possible, the probability that the gas migrates to the site is considered low due to the overlying impermeable Devensian Till.

4.4 Potential Receptors

Based on the site's environmental setting and the proposed future end use of the area following redevelopment, the following potential receptors have been identified:

Table 4.3: Potential Receptors

Ref.	Receptor	Description
R1	Current & future site users	Site users; personnel, general workers and maintenance workers,
R2	Construction Workers	Contractors working on the development of the site. Construction workers, maintenance workers or other personnel who may be directly exposed to contaminated materials in the course of their activities).
R3	Controlled Waters	Secondary A Aquifer, Secondary Aquifer Undifferentiated and on-site drainage
R4	Adjacent Site Users	Adjacent site users. Third-party land (*i.e.* the possibility of contamination migrating off-site onto third party land *via* contaminated groundwater, surface water run-off).
R5	Infrastructure / Buried services	Proposed buildings and buried services

NOTE: ground workers (i.e. If the site were redeveloped, any associated activities may bring site personnel and construction workers into contact with potentially contaminative materials, however, it is considered that the risks to workers will be short term and could be controlled by safe working procedures.

4.5 Potential Contaminant Linkages

In order for there to be a plausible contaminant linkage there must be a source, receptor and pathway and a feasible linkage between them (a contaminant linkage).

Consequently, even where a contaminant is identified, if there is no pathway for the contamination to reach a receptor, or no receptor then there can be no significant risk and remedial actions are not required.

Central to this risk assessment process is the development of a 'conceptual model'. This is a descriptive and/or pictorial representation of the area of potential contamination, the surrounding environment and the processes acting on the contaminants by which they can move and come into contact with receptors (*e.g.* by leaching and migration into groundwater).

Production of a conceptual model requires an assessment of risk to be made. Risk is a combination of the likelihood of an event occurring and the magnitude of its consequences.

Therefore, in order to assess risk both the likelihood and the consequences of an event must be taken into account.

This report adopts the methodology for risk evaluation presented in CIRIA report C552 'Contaminated Land Risk Assessment – A Guide to Good Practice', 2001.

The method is qualitative and involves the classification of the following:

- The magnitude of the potential severity or consequence of the risk occurring (*Table 4.4*);
- The magnitude of the likelihood or probability of the risk occurring (*Table 4.5*);
- Once the likelihood of an event occurring and its severity have been classified, a risk category can be assigned (*Table 4.6*).

Table 4.4: Classification of consequence

Classification	Definition
Severe	Acute risks to human health, catastrophic damage to buildings/property, major pollution of controlled waters.
Medium	Chronic risk to human health, pollution of sensitive controlled waters, significant effects on sensitive ecosystems or species, significant damage to buildings or structures.
Mild	Pollution of non-sensitive waters, minor damage to buildings or structures.
Minor	Requirement for protective equipment during site works to mitigate health effects, damage to non-sensitive ecosystems or species.

Table 4.5: Classification of Probability

Classification	Definition
High Likelihood	There is a pollution linkage and an event that either appears very likely in the short term and almost inevitable over the long term or there is evidence at the receptor of harm or pollution.

Classification	Definition
Likely	There is a pollution linkage, and all the elements are present and in the right place, which means that it is probable that an event will occur. Circumstances are such that an event is not inevitable, but possible in the short term and likely over the long term
Low Likelihood	There is a pollution linkage and circumstances are possible under which an event could occur. However, it is by no means certain that even over a longer period such event would take place and is less likely in the shorter term.
Unlikely	There is a pollution linkage, but circumstances are such that it is improbable that an event would occur even in the very long term.

Table 4.6: Risk Assessment Matrix

Consequence					
Severe	Medium	Mild	Minor		
Very High Risk	High Risk	Moderate Risk	Moderate / Low Risk	High Likelihood	Probability
High Risk	Moderate Risk	Moderate / Low Risk	Low Risk	Likely	
Moderate Risk	Moderate / Low Risk	Low Risk	Very Low Risk	Low Likelihood	
Moderate / Low Risk	Low Risk	Very Low Risk	Very Low Risk	Unlikely	
Low Risk	Very Low Risk	Very Low Risk	Very Low Risk	Negligible Likelihood	

Sutcliffe has devised a conceptual model based on the information obtained to date through the desk-based study and future residential usage of the site. This is detailed in tabular format in *Table 4.7* and pictorially in *Figure 4*.

Table 4.7: Preliminary Risk Evaluation of Potential Contaminant Linkages

1. Hazard Identification		2. Hazard Assessment				3. Risk Estimation		4. Risk Evaluation	5. Action required
Contaminant Source		Pathway		Receptor		Consequence	Probability	Classification	
S1	Potentially contaminated soil on-site	P1	Direct contact with potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	It is possible that harm could arise to a designated receptor from an identified hazard. Investigation is normally required to clarify the risk and to determine the potential liability. Some remedial works may be required in the longer term.
		P2	Ingestion of potential contaminants.	R1/2	Site users	Medium	Low	Moderate / Low Risk	
		P3	Inhalation of potential contaminants.	R1/2	Site users	Severe	Unlikely	Moderate / Low Risk	
		P4	Leaching and migration of contaminants.	R3/5	Secondary A Aquifer	Medium	Low	Moderate / Low Risk	
		P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	
S2	Mine gas associated with historic mining activity	P4	Leaching and migration of contaminants.	R3/5	Secondary A Aquifer	Medium	Unlikely	Low Risk	
		P5	Vertical and lateral migration of ground gases / vapours.	R1	Site users	Severe	Unlikely	Moderate / Low Risk	
				R4	Property	Severe	Unlikely	Moderate / Low Risk	

5 Conclusions & Recommendations

5.1 Introduction

Sutcliffe Investigations were instructed by Jigsaw Homes, to provide a Phase I PRA report. The purpose of the report is to generate preliminary environmental assessment data for submission with an outline planning application for redevelopment of the site.

This comprised a review of the Phase I PRA data, collection of environmental information and reports undertaken on the site.

5.2 Environmental Risk Assessment Findings

The site is irregular in shape and is bordered by residential properties, commercial premises and local amenities. The site currently consists of a former public house with associated carparking. The development history of the site has not identified a significant source of environmental concern, and information contained within the environmental database has not highlighted any major concerns. The site is underlain by a Secondary A Aquifer for the bedrock, with a Secondary Aquifer Undifferentiated for the superficial deposits.

Taking the above into account, it is considered that there is a low potential for significant contamination to be present, however it is considered that localised contamination that may represent a risk to long term human health and also with the potential for leaching of contaminants into controlled waters may be present. Consequently, the environmental risk setting for the site is considered to be low.

5.3 Classification & Land Use Risk

The site can be accessed via the eastern southern and western boundaries. The site is relatively flat and largely comprises grassed areas surrounding a disused former public house with a small area of hardstanding on the western portion of the site.

Historical maps initially indicate that historically off-site the surrounding land comprised fields, a skin yard, coal pits, rope walks, brooks, chemical works, brickfields, works, a chapel, schools, a manufactures, railway lines, a canal, and the increase in residential properties over time in all surrounding areas of the site.

The classification of risk is as follows:

Table 5.1: Land Use Risk Classification

Class	Description
Class 1	Potential for High levels of contamination and migration of contamination off the site.
Class 2	Potential for Medium levels of contamination and migration of contamination off site.
Class 3	Potential for Low levels of contamination and migration of contamination off site.
Class 4	Potential for limited contamination.

The Phase I PRA has not highlighted significant areas of concern and therefore, the site is deemed to be Class 3 – Low Risk.

5.4 Geotechnical Uncertainty

The site has been subject to previous development and therefore, the potential for relic foundations and obstructions cannot be discounted.

5.5 Conclusions & Recommendations

Based on the findings of the Phase I PRA review, Sutcliffe Investigations do not consider there to be any identifiable significant environmental issues regarding the site. However, there is limited information of the ground for geotechnical properties and as such we would therefore recommend the following sequential works are undertaken:

- Submission of this Phase I PRA Report for the benefit of validating the outline planning application.
- Commission a Coal Mining Risk Assessment (CMRA).
- Commission a Phase II Ground Investigation designed to discharge any contaminated land conditions that may be assigned to the site and allow the design of economic foundation solutions.

Introduction

The Environment Act 1995 has made site sensitivity a key issue, as the legislation pays as much attention to the pathways by which contamination could spread, and to the vulnerable targets of contamination, as it does the potential sources of contamination.
For this reason, Landmark's Site Sensitivity maps and Datasheet(s) place great emphasis on statutory data provided by the Environment Agency/Natural Resources Wales and the Scottish Environment Protection Agency; it also incorporates data from Natural England (and the Scottish and Welsh equivalents) and Local Authorities; and highlights hydrogeological features required by environmental and geotechnical consultants. It does not include any information concerning past uses of land. The datasheet is produced by querying the Landmark database to a distance defined by the client from a site boundary provided by the client.
In this datasheet the National Grid References (NGRs) are rounded to the nearest 10m in accordance with Landmark's agreements with a number of Data Suppliers.

Index Map

For ease of identification, your site and buffer have been split into Slices, Segments and Quadrants. These are illustrated on the Index Map opposite and explained further below.

Slice
Each slice represents a 1:10,000 plot area (2.7km x 2.7km) for your site and buffer. A large site and buffer may be made up of several slices (represented by a red outline), that are referenced by letters of the alphabet, starting from the bottom left corner of the slice "grid". This grid does not relate to National Grid lines but is designed to give best fit over the site and buffer.

Segment
A segment represents a 1:2,500 plot area. Segments that have plot files associated with them are shown in dark green, others in light blue. These are numbered from the bottom left hand corner within each slice.

Quadrant
A quadrant is a quarter of a segment. These are labelled as NW, NE, SW, SE and are referenced in the datasheet to allow features to be quickly located on plots. Therefore a feature that has a quadrant reference of A7NW will be in Slice A, Segment 7 and the NW Quadrant.

Sutcliffe

Lancashire And Furness

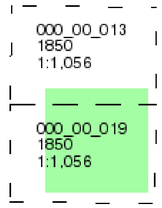

Published 1850

Source map scale - 1:1,056

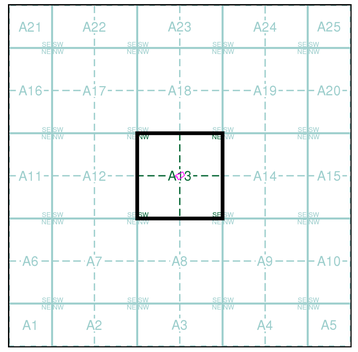

The 1:1056 scale of Ordnance Survey mapping was adopted from Ireland in 1848 and was used to survey towns with a population of over 4000, plus county towns of lesser population, in those counties mapped at the six-inch scale in 1841-55. The scale was the largest scale at which London was mapped by the Ordnance Survey and a 'skeleton' survey of the capital, showing little more than streets, street names, frontages and altitudes, was undertaken between 1848 and 1850. The majority of the 1:1056 surveys were later replaced by 1:500 surveys; although almost all the remainder were revised at this scale, sometimes more than once before 1895. The type of detail shown on the 1:1056 scale is broadly similar to that on 1:500; the apparent omission of minor details such as sewer access points and street lights may be as much a reflection of the generally earlier date of these plans, as of the specification of the map.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Sutcliffe

Lancashire And Furness

Published 1891

Source map scale - 1:500

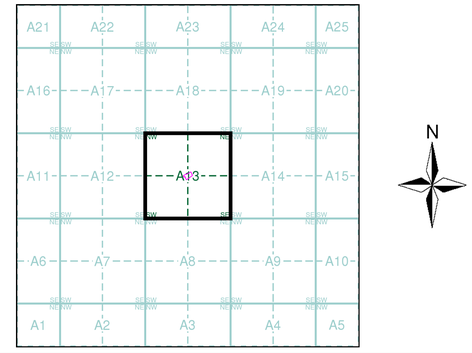

The 1:500 scale Ordnance Survey mapping was introduced in 1855 as a replacement for the 1:528 scale and to compliment the 1:2500 scale that had been implemented in 1853. By 1895, the 1:500 scale covered most towns over a population of about 4000 at the time of survey, although very few towns were mapped more than once at this scale, and none have been since 1910. The 1:500 scale gives particular emphasis to such features as lamp posts, man holes, arched passages and minor building projections. Also often featured are divisions between tenements, interior ground floor layouts of public buildings, and on earlier plans, the functions of the various parts of larger industrial premises are also indicated. Content of the plans does vary however, from one town to the next in terms of, for example, the completeness of railway tracks and the coverage of public buildings.

Please note: Due to the partial coverage of Historical Town Plans, it is possible that not all segments within an order will contain mapping. Only the segments that have Town Plan coverage will be generated.

Lancashire And Furness

Published 1893

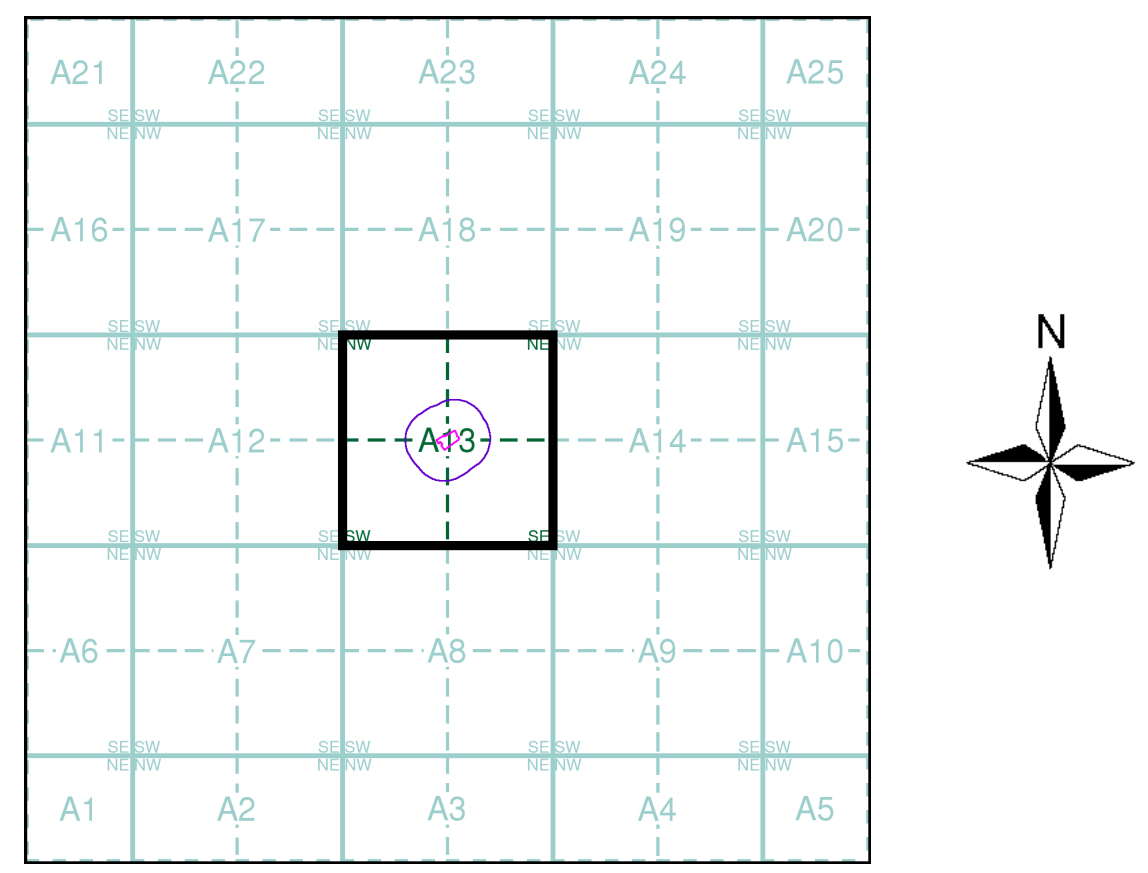

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Source map scale - 1:2,500

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas and by 1896 it covered the whole of what were considered to be the cultivated parts of Great Britain. The published date given below is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas.

Supply of Unpublished Survey Information

Published 1973

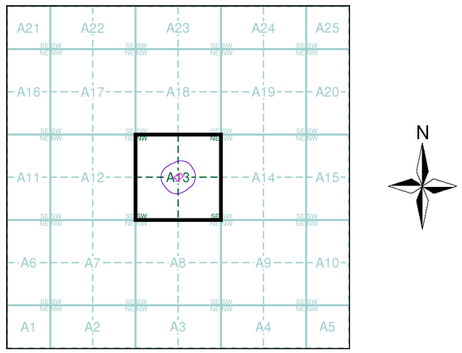

Source map scale - 1:1,250

SUSI maps (Supply of Unpublished Survey Information) were produced between 1972 and 1977, mainly for internal use at Ordnance Survey. These were more of a `work-in-progress' plan as they showed updates of individual areas on a map. These maps were unpublished, and they do not represent a single moment in time. They were produced at both 1:2,500 and 1:1,250 scales.

Source map scale - 1:1,250

'Large Scale National Grid Data' superseded SIM cards (Ordnance Survey's 'Survey of Information on Microfilm') in 1992, and continued to be produced until 1999. These maps were the fore-runners of digital mapping and so provide detailed information on houses and roads, but tend to show less topographic features such as vegetation. These maps were produced at both 1:2,500 and 1:1,250 scales.

Sutcliffe

Lancashire And Furness

Published 1848

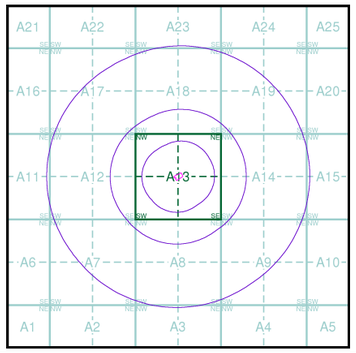

Source map scale - 1:10,560

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Sutcliffe

Ordnance Survey Plan

Published 1972 - 1979

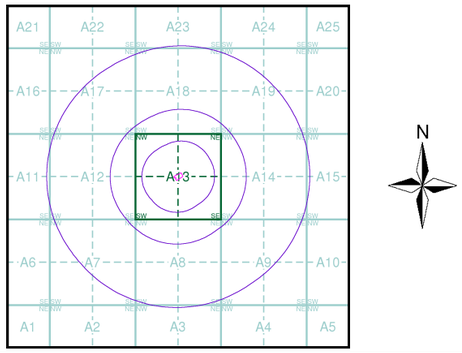

Source map scale - 1:10,000

The historical maps shown were reproduced from maps predominantly held at the scale adopted for England, Wales and Scotland in the 1840`s. In 1854 the 1:2,500 scale was adopted for mapping urban areas; these maps were used to update the 1:10,560 maps. The published date given therefore is often some years later than the surveyed date. Before 1938, all OS maps were based on the Cassini Projection, with independent surveys of a single county or group of counties, giving rise to significant inaccuracies in outlying areas. In the late 1940`s, a Provisional Edition was produced, which updated the 1:10,560 mapping from a number of sources. The maps appear unfinished - with all military camps and other strategic sites removed. These maps were initially overprinted with the National Grid. In 1970, the first 1:10,000 maps were produced using the Transverse Mercator Projection. The revision process continued until recently, with new editions appearing every 10 years or so for urban areas.

Manchester

Published 1975

Source map scale - 1:25,000

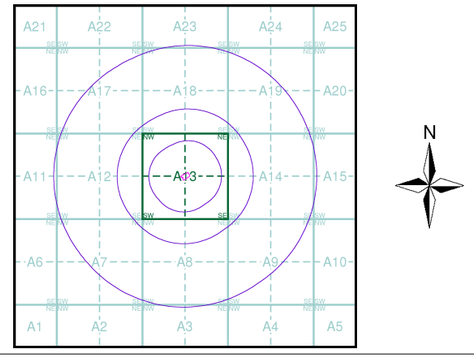

These maps were produced by the Russian military during the Cold War between 1950 and 1997, and cover 103 towns and cities throughout the U.K. The maps are produced at 1:25,000, 1:10,000 and 1:5,000 scale, and show detailed land use, with colour-coded areas for development, green areas, and non-developed areas. Buildings are coloured black and important building uses (such as hospitals, post offices, factories etc.) are numbered, with a numbered key describing their use.
They were produced by the Russians for the benefit of navigation, as well as strategic military sites and transport hubs, for use if they were to have invaded the U.K. The detailed information provided indicates that the areas were surveyed using land-based personnel, on the ground, in the cities that are mapped.

VectorMap Local

Published 2024

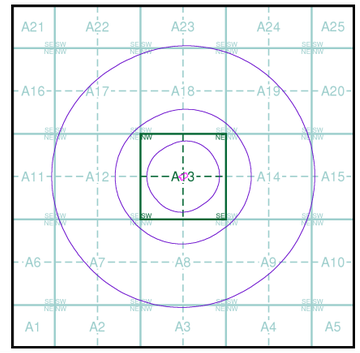

Source map scale - 1:10,000

VectorMap Local (Raster) is Ordnance Survey's highest detailed 'backdrop' mapping product. These maps are produced from OS's VectorMap Local, a simple vector dataset at a nominal scale of 1:10,000, covering the whole of Great Britain, that has been designed for creating graphical mapping. OS VectorMap Local is derived from large-scale information surveyed at 1:1250 scale (covering major towns and cities),1:2500 scale (smaller towns, villages and developed rural areas), and 1:10 000 scale (mountain, moorland and river estuary areas).

Geology 1:50,000 Maps

This report contains geological map extracts taken from the BGS Digital Geological map of Great Britain at 1:50,000 scale and is designed for users carrying out preliminary site assessments who require geological maps for the area around the site. This mapping may be more up to date than previously published paper maps.
The various geological layers - artificial and landslip deposits, superficial geology and solid (bedrock) geology are displayed in separate maps, but superimposed on the final 'Combined Surface Geology' map. All map legends feature on this page. Not all layers have complete nationwide coverage, so availability of data for relevant map sheets is indicated below.

Artificial Ground and Landslip

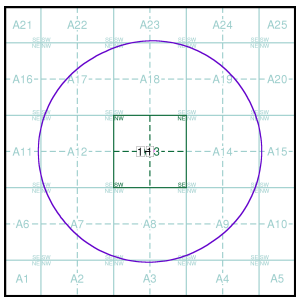

Artificial ground is a term used by BGS for those areas where the ground surface has been significantly modified by human activity. Information about previously developed ground is especially important, as it is often associated with potentially contaminated material, unpredictable engineering conditions and unstable ground.

Artificial ground includes:

- Made ground - man-made deposits such as embankments and spoil heaps on the natural ground surface.
- Worked ground - areas where the ground has been cut away such as quarries and road cuttings.
- Infilled ground - areas where the ground has been cut away then wholly or partially backfilled.
- Landscaped ground - areas where the surface has been reshaped.
- Disturbed ground - areas of ill-defined shallow or near surface mineral workings where it is impracticable to map made and worked ground separately.

Mass movement (landslip) deposits on BGS geological maps are primarily superficial deposits that have moved down slope under gravity to form landslips. These affect bedrock, other superficial deposits and artificial ground. The dataset also includes foundered strata, where the ground has collapsed due to subsidence.

Superficial Geology

Superficial Deposits are the youngest geological deposits formed during the most recent period of geological time, the Quaternary, which extends back about 1.8 million years from the present.

They rest on older deposits or rocks referred to as Bedrock. This dataset contains Superficial deposits that are of natural origin and 'in place'. Other superficial strata may be held in the Mass Movement dataset where they have been moved, or in the Artificial Ground dataset where they are of man-made origin.

Most of these Superficial deposits are unconsolidated sediments such as gravel, sand, silt and clay, and onshore they form relatively thin, often discontinuous patches or larger spreads.

Bedrock and Faults

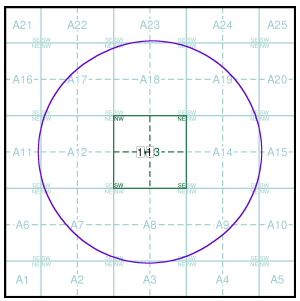

Bedrock geology is a term used for the main mass of rocks forming the Earth and are present everywhere, whether exposed at the surface in outcrops or concealed beneath superficial deposits or water.

The bedrock has formed over vast lengths of geological time ranging from ancient and highly altered rocks of the Proterozoic, some 2500 million years ago, or older, up to the relatively young Pliocene, 1.8 million years ago.

The bedrock geology includes many lithologies, often classified into three types based on origin: igneous, metamorphic and sedimentary.

The BGS Faults and Rock Segments dataset includes geological faults (e.g. normal, thrust), and thin beds mapped as lines (e.g. coal seam, gypsum bed). Some of these are linked to other particular 1:50,000 Geology datasets, for example, coal seams are part of the bedrock sequence, most faults and mineral veins primarily affect the bedrock but cut across the strata and post date its deposition.

Combined Surface Geology

The Combined Surface Geology map combines all the previous maps into one combined geological overview of your site.

Please consult the legends to the previous maps to interpret the Combined "Surface Geology" map.

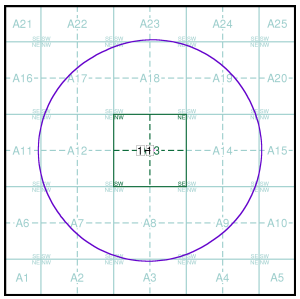

Additional Information

More information on 1:50,000 Geological mapping and explanations of rock classifications can be found on the BGS website. Using the LEX Codes in this report, further descriptions of rock types can be obtained by interrogating the 'BGS Lexicon of Named Rock Units'. This database can be accessed by following the 'Information and Data' link on the BGS website.

Description of Works	Potential SI Works

* The WORK TYPE BUFFER is a distance added to your search area based on the Work type you have chosen.

Site Map

Please note that the above map only displays the location of the proposed work site and will not display any of the Members' pipes and cables. It is imperative that this area accurately reflects the proposed work site.

Affected LSBUD members

(LSBUD Members who have assets registered on LSBUD within the vicinity of your search area.)

Do not proceed until all Members listed below have confirmed that your works can continue.

Asset Owner	Phone/Email	Emergency Only	Status
Cadent Gas	0800688588	0800111999	Await response
Electricity North West Limited	08001954141	08001954141	Await response
EUNetworks Fiber UK Limited	02031788003	02031788003	Await response
Last Mile	plantenquiries@lastmile-uk.com	0800111999	Await response
Neos Networks	03453053337	03453053337	Await response

Status explanation

Await Response means that the asset owner will contact you. This is typically by sending the plan response but they may ask for further information before being able to do so, particularly if any payments or authorisations are required.

Email Additional Info means that the asset owner needs further information about your works to assess your enquiry before providing a response. Please provide any details you have available including plans, method statements etc. if available.

Enquiry Confirmation
LSBUD Ref: 36202443

Date of enquiry: 05/02/2025
Time of enquiry: 10:20

Important notices

It is very important that you correctly understand what the service does and the procedures in order for you to work safely. Please refer to the LSBUD Support Page (www.lsbud.co.uk/linesearchbeforeudig-support) for further guidance.
This information includes how to provide additional information to the LSBUD Members who request it to provide a response to your enquiry.
Validity and search criteria. The results of this enquiry are based on the confirmed information you entered and are valid only as at the date and time of the enquiry. It is your responsibility to ensure that the Enquiry Details are correct, and LinesearchbeforeUdig (LSBUD) accepts no responsibility for any errors or omissions in the Enquiry Details or any consequences thereof. LSBUD Members update their asset information on a regular basis so you are advised to consider this when undertaking any works. It is your responsibility to choose the period of time after which you need to resubmit any enquiry but the maximum time (after which your enquiry will no longer be dealt with by the LSBUD Helpdesk and LSBUD Members) is 28 days. If any details of the enquiry change, particularly including, but not limited to, the location of the work, then a further enquiry must be made.
Terms and Conditions. Please note that this enquiry is subject always to our standard terms and conditions available at www.lsbud.co.uk ("Terms of Use") and the disclaimer at the end of this document. Please note that in the event of any conflict or ambiguity between the terms of this Enquiry Confirmation and the Terms of Use, the Terms of Use shall take precedence.

Out of Standard Service

Where an out-of-standard service is present please contact plant protection 0800 688 588 for further information.
Out-of-standard service symbology may be used to indicate one or more of the following:
- Identification of shallow services
- Identification of dual services
- Recording of non-perpendicular services

A perpendicular service/connection is laid in a straight line from the entry point at the property to the connection at the main – this includes a pipe that has a perpendicular connection and is not straight but does not deviate more than 1m off centre line.

View extent: 100m, 100m

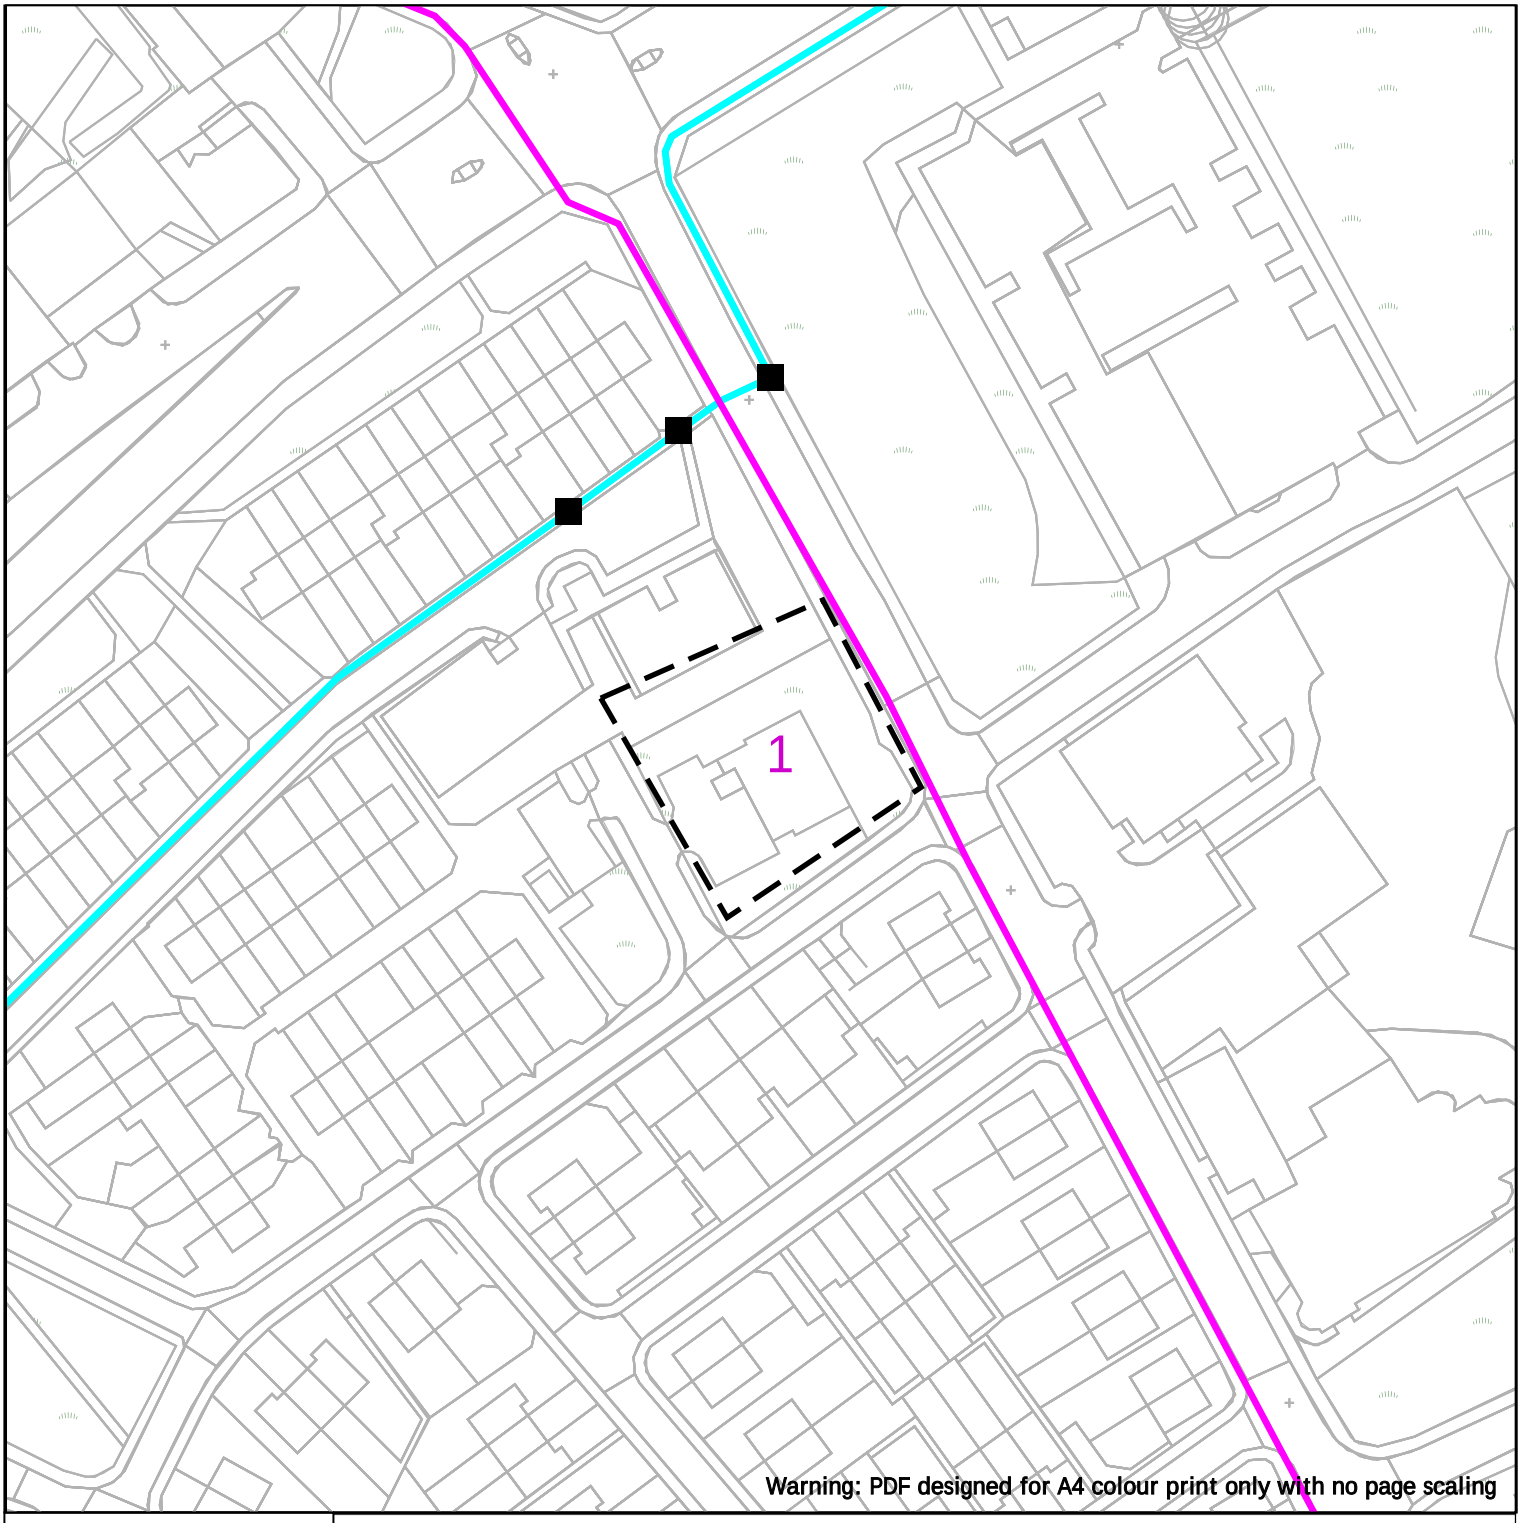

Scale: 1:500 (When plotted at A4)

IMPORTANT NOTICES

This plan shows these pipes owned by Cadent Gas Limited in its role as a Licensed Gas Transporter (GT). Gas pipes owned by other GT's or otherwise privately owned may be present in this area. Information with regards to such pipes should be obtained from the relevant owners. The information shown on this plan is given without warranty, the accuracy thereof cannot be guaranteed. Service pipes, valves, syphons, stub connections etc. are not shown but their presence should be anticipated. No liability of any kind whatsoever is accepted by Cadent Gas Limited or their agents, servants or contractors for any errors or omission. Safe digging practices, in accordance with HS(G)47, must be used to verify and establish the actual position of mains, pipes, services and other apparatus on site before any mechanical plant is used. It is your responsibility to ensure that this information is provided to all persons (either direct labour or contractors) working for you on or near gas apparatus. The information included on this plan should not be referred to beyond a period of 28 days from the date of issue.

This plan shows cables owned by Last Mile Electricity Limited in their role as a Licensed Distributor (IDNO). Cables owned by other Distributors or privately owned cables (or, indeed, any other apparatus, equipment or infrastructure may also be present in the area. Information regarding such cables (or any such other apparatus, equipment, or infrastructure) should be obtained from the relevant owners.
The information shown on these plans is provided for general information purposes only and should not be relied on or treated as a substitute for your own enquiries. We make no warranty, representation, or guarantee, whether express or implied, regarding the content of the plans or that the content is accurate, complete, or up to date. No liability of any kind whatsoever is accepted by Last Mile Asset Management Limited, or their agents, servants or contractors for any error, omission, or misstatement.
Safe digging practices, in accordance with HS(G)47, must be used to verify and establish the actual position of all electrical cables and apparatus on site before any mechanical plant is used. It is your responsibility to ensure that this information is provided to all persons on or near electrical cables or apparatus. The information included on this plan should not be referred to beyond a period of 3 month from the date of issue.

Appendix D – Detailed Site Historical Review

Appendix D - Detailed Historical Maps Review		
Date/Scale	Features On-site	Features Off-site
1848 1:10,560 1850 1:1056	Due to the scale of the maps, it is unclear if the markings on site are **LAND BOUNDARIES** or building thought to be **RESIDENTIAL PROERTIES.**	A **SKINYARD** is noted approximately 70m east of the site. A **COAL PIT** is noted approximately 200m east of the site. **ROPEWALKS** are noted approximately 100m and 400m south of the site. **NEWTON BROOK** is noted approximately 105m south of the site. A **CHEMICAL WORKS** was noted approximately 290m south-east of the site. **SHOOTERS BROOK** was noted approximately 600m south of the site. A **BRICK FIELD** is noted approximately 390m south of the site and another is noted approximately 285m west of the site. **RESIDENTIAL PROPERTIES** are noted between 500 – 1000m south and south-west of the site.
1891 1:500	What appears to be **RESIDENTIAL PROPERTIES** are now noted on the site.	**RESIDENTIAL PROPERTIES** are now noted in the immediate surrounding areas of the site. A **WIRE WORKS** is noted approximately 15m north-west of the site. A **CHAPEL** is noted approximately 10m north-east of the site beyond which a **SCHOOL** is noted. A **FLOOR & CLOTH MANUFACTORY** is noted approximately 10m south-east of the site. **OLDHAM ROAD FLINT GLASS WORKS** is noted approximately 65m east of the site. **RAILWAY LINES** are noted 170m west and 200m north of the site.
1893 1:2,500 1894 1:10,560	No change is evident on site.	Little change is noted in the surrounding areas of the site.

Appendix D - Detailed Historical Maps Review		
Date/Scale	Features On-site	Features Off-site
1908 1:2,500 1909 1:10,560	No change is evident on site.	The **INDUSTRIAL AREA** approximately 270m south-east of the site has become more established. The **ROCHDALE CANAL** is also noted approximately 365m south-east of the site running through this industrial area.
1922 - 1931 1;2,500 1923 1:10,560	No change is evident on site.	Little change is noted in the surrounding areas of the site.
1938 1:10,560	No change is evident on site.	Two large **DERELICT AREAS** are now noted approximately 240m north-west of the site and 415m south of the site.
1948 - 1949 1:1,250	The site now appears **UNDEVELOPED** (1949).	The floor and cloth manufacture approximately 10m south-east of the site is now noted as a **COTTON WEAVING MILL** and a **BAG FACTORY**.
1951 1:2,500	No change is evident on site.	Little change is noted in the surrounding areas of the site.
1952 – 1955 1:1,250	A **TANK** is noted on the western portion of the site (1952), its purpose is unclear.	Little change is noted in the surrounding areas of the site.
1956 1:10,000	The tank is no longer noted.	The derelict areas 240m north-west and 415m south of the site have again become developed with **RESIDENTIAL PROPERTIES.**
1960 - 1971 1:1,250 1966 – 1968 1:10,000	No change is evident on site.	The configuration of properties immediately south-west of the site has changed (1965). **RESIDENTIAL PROPERTIES** immediately east (1970) and approximately 65m north of the site are no longer evident (1965).
1977 - 1984 1:1,250	The **APOLLO PUBLIC HOUSE** is now noted on the site (1979).	An **ELECTRIC SUBSTATION** is noted immediately west of the site. Much of the industrial area to the south-east of the site has been demolished and replaced with **LOCAL AMINITIES** including a **LIBRARY, SWIMMING POOL, OFFICES** and **SCHOOLS.**

Appendix D - Detailed Historical Maps Review		
Date/Scale	Features On-site	Features Off-site
1980 - 1986 1:10,000 1981 – 1991 1:1,250	No change is evident on site.	Little change is noted in the surrounding areas of the site.
1990 - 1994 1:10,000 1992 1:1,250	No change is evident on site.	There has again been demolition to the industrial area to the south-east of the site.
1999 1:10,000	No change is evident on site.	Demolition of residential properties approximately 620m east of the site is noted.
2006 1:10,000	No change is evident on site.	Little change is noted in the surrounding areas of the site.
2024 1:10,000	No change is evident on site.	Little change is noted in the surrounding areas of the site.

Mine entries

Entry type	Reference	Grid reference	Treatment description	Mineral	Conveyancing details
Shaft	385399-008	385808 399682		Coal	
Shaft	385399-009	385730 399596		Coal	
Shaft	385399-015	385691 399608	This shaft has been infilled with shale and capped with concrete.	Coal	
Shaft	385399-016	385708 399620	This shaft has been infilled with shale.	Coal	
Shaft	385399-017	385706 399609	This shaft has been infilled with shale.	Coal	

Abandoned mine plan catalogue numbers

The following abandoned mine plan catalogue numbers intersect with some, or all, of the enquiry boundary:

2655	NW1171	NW645
PO0	11471	0
NW1172	NW644	

Please contact us on 0345 762 6848 to determine the exact abandoned mine plans you require based on your needs.

Outcrops

Seam name	Mineral	Seam workable	Distance to outcrop (m)	Direction to outcrop	Bearing of outcrop
BRADFORD FOUR FEET	Coal	Yes	37.1	North-East	116

Geological faults, fissures and breaklines

No faults, fissures or breaklines recorded.

Opencast mines

None recorded within 500 metres of the enquiry boundary.

Coal Authority managed tips

None recorded within 500 metres of the enquiry boundary.

Section 2 – Investigative or remedial activity

Please refer to the 'Summary of findings' map (on separate sheet) for details of any activity within the area of the site boundary.

Site investigations

Distance to site investigation (m)	Direction
18.1	South-East
21.1	North-East

See Section 4 for further information.

Remediated sites

None recorded within 50 metres of the enquiry boundary.

Coal mining subsidence

The Coal Authority has not received a damage notice or claim for the subject property, or any property within 50 metres of the enquiry boundary, since 31 October 1994.

There is no current Stop Notice delaying the start of remedial works or repairs to the property.

The Coal Authority is not aware of any request having been made to carry out preventive works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991.

Mine gas

None recorded within 500 metres of the enquiry boundary.

Mine water treatment schemes

None recorded within 500 metres of the enquiry boundary.

Copyright © 2025 The Coal Authority

Section 3 – Licensing and future mining activity

Future underground mining
None recorded.

Coal mining licensing
None recorded within 200 metres of the enquiry boundary.

Court orders
None recorded.

Section 46 notices
No notices have been given, under section 46 of the Coal Mining Subsidence Act 1991, stating that the land is at risk of subsidence.

Withdrawal of support notices
The property is in an area where a notice to withdraw support was given in 1955.

The property is not in an area where a notice has been given under section 41 of the Coal Industry Act 1994, cancelling the entitlement to withdraw support.

Payments to owners of former copyhold land
The property is not in an area where a relevant notice has been published under the Coal Industry Act 1975/Coal Industry Act 1994.

Copyright © 2025 The Coal Authority

Section 4 – Further information

The following potential risks have been identified and as part of your risk assessment should be investigated further.

Future development

If development proposals are being considered, technical advice relating to both the investigation of coal and former coal mines and their treatment should be obtained before beginning work on site. All proposals should apply specialist engineering practice required for former mining areas. No development should be undertaken that intersects, disturbs or interferes with any coal or coal mines without first obtaining the permission of the Coal Authority.

MINE GAS: Please note, if there are no recorded instances of mine gas within 500m of the enquiry boundary, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded. Developers should be aware that the investigation of coal seams, mine workings or mine entries may have the potential to generate and/or displace underground gases. Associated risks both to the development site and any neighbouring land or properties should be fully considered when undertaking any ground works. The need for effective measures to prevent gases migrating onto any land or into any properties, either during investigation or remediation work, or after development must also be assessed and properly addressed. In these instances, the Coal Authority recommends that a more detailed Gas Risk Assessment is undertaken by a competent assessor.

Development advice

The site is within an area of historical coal mining activity. Should you require advice and/or support on understanding the mining legacy, its risks to your development or what next steps you need to take, please contact us.

Site investigations

The site is within an area of previous interest. It is close to where the Coal Authority has received information relating to past site investigations.

The site requires further investigation and may influence how you approach your risk assessment.

For further information on specific site or ground investigations in relation to any issues raised in Section 4, please call us on 0345 762 6848 or email us at groundstability@coal.gov.uk.

Copyright © 2025 The Coal Authority

Section 5 – Data definitions

The datasets used in this report have limitations and assumptions within their results. For more guidance on the data and the results specific to the enquiry boundary, please **call us on 0345 762 6848** or **email us at groundstability@coal.gov.uk.**

Past underground coal mining

Details of all recorded underground mining relative to the enquiry boundary. Only past underground workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination, will be included.

Probable unrecorded shallow workings

Areas where the Coal Authority believes there to be unrecorded coal workings that exist at or close to the surface (less than 30 metres deep).

Spine roadways at shallow depth

Connecting roadways either, working to working, or, surface to working, both in-seam and cross measures that exist at or close to the surface (less than 30 metres deep), either within or within 10 metres of the enquiry boundary.

Mine entries

Details of any shaft or adit either within, or within 100 metres of the enquiry boundary including approximate location, brief treatment details where known, the mineral worked from the mine entry and conveyance details where the mine entry has previously been sold by the Authority or its predecessors British Coal or the National Coal Board.

Abandoned mine plan catalogue numbers

Plan numbers extracted from the abandoned mines catalogue containing details of coal and other mineral abandonment plans deposited via the Mines Inspectorate in accordance with the Coal Mines Regulation Act and Metalliferous Mines Regulation Act 1872. A maximum of 9 plan extents that intersect with the enquiry boundary will be included. This does not infer that the workings and/or mine entries shown on the abandonment plan will be relevant to the site/property boundary.

Outcrops

Details of seam outcrops will be included where the enquiry boundary intersects with a conjectured or actual seam outcrop location (derived by either the British Geological Survey or the Coal Authority) or intersects with a defined 50 metres buffer on the coal (dip) side of the outcrop. An indication of whether the Coal Authority believes the seam to be of sufficient thickness and/or quality to have been worked will also be included.

Geological faults, fissures and breaklines

Geological disturbances or fractures in the bedrock. Surface fault lines (British Geological Survey derived data) and fissures and breaklines (Coal Authority derived data) intersecting with the enquiry boundary will be included. In some circumstances faults, fissures or breaklines have been known to contribute to surface subsidence damage as a consequence of underground coal mining.

Copyright © 2025 The Coal Authority

Opencast mines
Opencast coal sites from which coal has been removed in the past by opencast (surface) methods and where the enquiry boundary is within 500 metres of either the licence area, site boundary, excavation area (high wall) or coaling area.

Coal Authority managed tips
Locations of disused colliery tip sites owned and managed by the Coal Authority, located within 500 metres of the enquiry boundary.

Site investigations
Details of site investigations within 50 metres of the enquiry boundary where the Coal Authority has received information relating to coal mining risk investigation and/or remediation by third parties.

Remediated sites
Sites where the Coal Authority has undertaken remedial works either within or within 50 metres of the enquiry boundary following report of a hazard relating to coal mining under the Coal Authority's Emergency Surface Hazard Call Out procedures.

Coal mining subsidence
Details of alleged coal mining subsidence claims made since 31 October 1994 either within or within 50 metres of the enquiry boundary. Where the claim relates to the enquiry boundary confirmation of whether the claim was accepted, rejected or whether liability is still being determined will be given. Where the claim has been discharged, whether this was by repair, payment of compensation or a combination of both, the value of the claim, where known, will also be given.

Details of any current 'Stop Notice' deferring remedial works or repairs affecting the property/site, and if so the date of the notice.

Details of any request made to execute preventative works before coal is worked under section 33 of the Coal Mining Subsidence Act 1991. If yes, whether any person withheld consent or failed to comply with any request to execute preventative works.

Mine gas
Reports of alleged mine gas emissions received by the Coal Authority, either within or within 500 metres of the enquiry boundary that subsequently required investigation and action by the Coal Authority to mitigate the effects of the mine gas emission. Please note, if there are no recorded instances of mine gas reported, this does not mean that mine gas is not present within the vicinity. The Coal Authority Mine Gas data is limited to only those sites where a Mine Gas incident has been recorded.

Copyright © 2025 The Coal Authority

Mine water treatment schemes
Locations where the Coal Authority has constructed or operates assets that remove pollutants from mine water prior to the treated mine water being discharged into the receiving water body.

These schemes are part of the UK's strategy to meet the requirements of the Water Framework Directive. Schemes fall into 2 basic categories: Remedial – mitigating the impact of existing pollution or Preventative – preventing a future pollution incident.

Mine water treatment schemes generally consist of one or more primary settlement lagoons and one or more reed beds for secondary treatment. A small number are more specialised process treatment plants.

Future underground mining
Details of all planned underground mining relative to the enquiry boundary. Only those future workings where the enquiry boundary is within 0.7 times the depth of the workings (zone of likely physical influence) allowing for seam inclination will be included.

Coal mining licensing
Details of all licenses issued by the Coal Authority either within or within 200 metres of the enquiry boundary in relation to the under taking of surface coal mining, underground coal mining or underground coal gasification.

Court orders
Orders in respect of the working of coal under the Mines (Working Facilities and Support) Acts of 1923 and 1966 or any statutory modification or amendment thereof.

Section 46 notices
Notice of proposals relating to underground coal mining operations that have been given under section 46 of the Coal Mining Subsidence Act 1991.

Withdrawal of support notices
Published notices of entitlement to withdraw support and the date of the notice. Details of any revocation notice withdrawing the entitlement to withdraw support given under Section 41 of the Coal Industry Act 1994.

Payment to owners of former copyhold land
Relevant notices which may affect the property and any subsequent notice of retained interests in coal and coal mines, acceptance or rejection notices and whether any compensation has been paid to a claimant.
